# **Syllabus for Four Years Program**

In

B. Tech (Fibres and Textile Processing Technology) (2023-2024)

(Under the New Education Policy (NEP 2020))

Offered by

# DEPARTMENT OF FIBRES AND TEXTILE PROCESSING TECHNOLOGY

INSTITUTE OF CHEMICAL TECHNOLOGY (University Under Section-3 of UGC Act, 1956) Elite Status and Center for Excellence Government of Maharashtra

Nathalal Parekh Marg, Matunga, Mumbai 400 019 (INDIA) www.ictmumbai.edu.in, Tel: (91-22) 3361 1111, Fax: 2414 5614

#### A. Preamble:

The Institute of Chemical Technology (ICT) was established in 1933 and was earlier known as the University Department of Chemical Technology (UDCT). Inaugurated by then Chairman of the Textile Mill Owner's Association, with an objective to provide Education and develop Capabilities in the area of Textile Processing and to fulfil the needs of the blooming Textile Industry in India.

Initially, it offered two courses: one in Textile Chemistry and the other in Chemical Engineering. The Textiles department is now completing the glorious journey of 88 years. This is the first and only premium institute specifically dedicated to study various aspects of Textile wet processing and conduct in-depth research to provide feasible techno-commercial solutions to ever-evolving industrial needs.

The department is closely working with various industries involved in fibre and yarn manufacturing, fabric processing and garment making, colourant and auxiliary chemical producing, instrument and equipment making, fashion designing and branding. It also has strong linkage and signed Memorandum of Understanding (MOU) with many national and international renowned universities. It is well known for the translational research and technology transfer and is often cited as a role model for academic institutes.

The department has the unique distinction of being the first discipline with which this academic institute started and has the highest student intake capacity among the technology courses within the institute. The course involves study of chemistry and manufacture of fibres, their chemical processing such as bleaching, dyeing, printing and finishing. It further encompasses the study of chemistry as well as application of various kinds of chemicals, dyes, thickeners, and finishing auxiliaries which are used in chemical processing of apparel, home furnishing and technical textiles. It also involves knowledge of green chemistry, biotechnology and nanotechnology with special reference to chemical processing of textiles.

#### **B. Programme Outcomes:**

#### Graduates will be able to:

- 1. **Engineering knowledge**: Apply the knowledge of mathematics, science, engineering fundamentals, and knowledge in specialized field of Fibres and Textile Processing Technology to the solution of complex Textile and apparel industrial problems.
- 2. **Problem analysis**: Identify, formulate, review research literature, and analyze complex Textile and Apparel chemical technological problems reaching substantiated conclusions using first principles of mathematics, natural sciences, engineering sciences including Fibres and Textile Processing technology.
- 3. **Design/development of solutions**: Design solutions for complex Fibres and Textile Processing technology related problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.
- 4. **Conduct investigations of complex problems**: Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions which can be used for constructing solutions to the problems.
- 5. **Modern tool usage**: Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modelling to complex Fibres and Textile Processing technology related activities with an understanding of the limitations.
- 6. **The engineer and society**: Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal and cultural issues and the consequent responsibilities relevant to the Fibres and Textile Processing technology practice.
- 7. Environment and sustainability: Understand the impact of the professional engineering solutions with respect to Fibres and Textile Processing technology, in societal and environmental contexts, and demonstrate the knowledge of, and need for sustainable development.
- 8. **Ethics**: Apply ethical principles and commit to professional ethics and responsibilities and norms of the engineering practice.
- 9. **Individual and teamwork**: Function effectively as an individual, and as a member or leader in diverse teams, and in multidisciplinary settings.

- 10. **Communication**: Communicate effectively on complex technological activities with reference to Fibres and Textile Processing Technology, with the engineering community and with society at large, such as, being able to comprehend and write effective reports and design documentation, make effective presentations, and give and receive clear instructions.
- 11. **Project management and finance**: Demonstrate knowledge and understanding of the engineering and management principles and apply these to one's own work, as a member and leader in a team, to manage projects and in multidisciplinary environments.
- 12. Life-long learning: Recognize the need for and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change.

#### PROGRAM SPECIFIC OUTCOMES (PSOs)

1. Develop a **confident graduate** who can offer **solutions to the shop floor complex problems** in **fibre to garment** textile processing field.

2. Instil fundamental knowledge and motivation to **go for advance studies and research** so that they could develop themselves into **Academician and Research scientists** making positive contribution to **generation and dissemination** of new **knowledge**.

3. Introduce **the diverse industry** and emerging **Textile Technologies** to create a **thirst** among the **students** for **innovative start- up** or career options taking advantage of the fast developing Indian economy.

#### C. Intake: 34

D. Eligibility criteria: HSC/12<sup>th</sup> Science

Physical and Analytical Chemistry Laboratory (CHP XXXX), other Chemistry Courses									
	Description of relevance of this course in the B. Tech. Programme								
The course introduces the students to key concepts of chemical analysis – sampling, selection of analytical method and data analysis. It presents basic techniques like spectroscopy and chromatography. The students should be able to select an appropriate analytical technique and apply it in accordance with its strengths and limitations.

	D	escription of relevance of this course in the B. Chem. Engg. Program			
Draw	ing is a la	nguage used by engineers and technologists. A student is required to	o kn	ow	the
vario	us process	es and the equipment used to carry out the processes. Some of the eleme	entai	ry ar	eas
like p	roduct siz	ing, manufacturing etc., are very common to all the branches of techno	logy	. Th	ese
and i	many othe	r processes require machines and equipment's. One should be famili	ar w	/ith	the
desig	n, manufa	cturing, working, maintenance of such machines and equipments. The	e sul	bject	t of
"drav	ving" is a r	medium through which, one can learn all such matter, because the "dra	awin	ngs"	are
usea	to repres	ent objects and various processes on the paper. Inrough the drawin	gs, a		: OT
accur	Tate Inform	nation is conveyed which will not be practicable through a spoken word	or a	writ	ten
text.	This cours	e is required in many subjects as well as later in the professional career.

## Semester IV

Cour	se Code:	Course Title: PCC	Credits		= 4
		Transport Phenomena	- 1		
			L	Т	Р
Sem	ester: IV	Total contact hours: 60	3	1	0
		<b>Course Outcomes</b> (students will be able to)			
1 Calculate friction factor, pressure drop, power requirements of singe phase flow in a c					rcular
pipe. (K3)					
2	Calculati	ng flow and power required for pumps. (K3)			
3	Calculate	e heat transfer coefficients and do basicsizing of double pipe and she	ll and	tube	e heat
	exchange	ers. (K3)			
4	Calculate	e mass transfer coefficients and estimatemass transfer rates in simple	situa	tions	5. (K3)
		List of Prerequisite Courses			
		XII <sup>th</sup> Standard Physics and Mathematics			
		List of Courses where this course will be prerequisite			
This	is a bas	ic course required in special subjects that deal with flow offluids,	heat a	nd r	nass
		transfer, etc.			
This	h	Description of relevance of this course in the B. I ech. Program		/ .	
Conc	onts such	as pressure momentum energy are introduced laws related to c	Conser	s. Vd Wati	nous on of
morr	ientum.	energy, mass are taught. Applications of these laws to various er	iginee	ering	and
tech	nological	situations and process equipment is explained with the help of	0	0	
		several problems.			
Sr.		Course contents (topics/subtopics)		R	eqd.
No.				<u> </u>	hrs
1.	Fluid Sta	tics and applications to engineering importance.			4
2.	Applicati	ons of Bernoulli's Equation, Pressure drop in pipes and Fittings,m	eters,		10
	and fluid	moving machinery such as pumps.			
3.	Particle [	Dynamics, Flow through Fixed and Fluidised Beds			4
4.	Equation	s of Continuity and Motion in laminar flows and its applicationsfor s	imple		6
	Couette	flow and Poiseuille flow applications			
5.	Heat co	onduction. Convective heat transfer and concept of heat tra	ansfer		4
6.	Design a	nd constructional aspects of exchangers: Types of flows: Concu	rrent,		10
	counter-	current and cross flows, log mean temperature difference, double	e pipe		
	and She	II and tube heat exchangers. Introduction to other heat exchanger	s like,		
	PHE, finr	ned tube heat exchangers, graphite block, etc.			
7.	Heat trai	nsfer aspects in agitated tanks, condensers, reboilers and evaporators	5.	+	6
	1				

8.	Fundamentals of mass transfer: Molecular diffusion in fluids, concept ofmass				
	transfer coefficients, and interface mass transfer.				
9.	Theories of Mass transfer, Analogies for heat and mass transfer, Empirical	4			
	correlations				
10.	Mass transfer applications in simple 1-D situations.	8			
	List of Text Books/ Reference Books				
1.	Transport Phenomena, Bird R.B., Stewart W.E., Lightfoot E.N.				
2.	Fluid Mechanics, Kundu Pijush K.				
3.	Fluid Mechanics, F. W. White				
4.	Unit Operations of Chemical Engineering, McCabe, Smith				

Course Code:		Course Title: SPL5	Cre	dits	= 3
тх	T1301	Testing of Textile Materials			
			L	Т	Р
Sem	ester: IV	Total contact hours: 45	2	1	0
		Course Outcomes (students will be able to )			•
1	Compreh	nend the objects of testing and its reasons and stages at which testing	ng is to	o be	done
	(K2)				
2	Analyze	different physical testing performed on the fibres, yarn, and	fabric	for	their
	mechani	cal, aesthetic and performance behaviour. (K3)			
3	3 Interpret and examine different fastness tests of the coloured goods (K4)				
4	Identify	different testing standards and their importance (K3)			
	•	List of Prerequisite Courses			
	In	troduction to Textile Wet Processing, Introduction to Textile Substra	tes		
		List of Courses where this course will be prerequisite			
		Technology of Garment Manufacturing and Merchandising			
		Description of relevance of this course in the B.Tech. Program			
Thi	s course \	will help students to understand and apply different analytical metho	ods for	test	ting
tex	tile, mea	surement of colour fastness and assessment of performance propert	ies of	text	ile.

	Garmen	t Manufacturing:			
1.	The Garı	ment Industry: Structure of the garment industry, sectors of Industry, p	rodu	ct	3
	types ar	nd organization. Apparel industry in India, Domestic industry: size	of th	ne	
	industry,	nature, and developments in recent years. Export industry: Size and nat	ure	of	
	the indu	stry.			
2.	Manufa	cturing Technology: Types of Fabric Packages, Types of Fabrics - One Way	- Tw	0	3
	Way Fa	brics - Their effect on spreading -Methods of Fabric spreading - Spre	adın	g	
	equipm	ents - Computerized spreaders - Marker making –Marker efficiency - Fa	acto	s	
	making	S marker endericy marker adplicating methods-computer alded in		-	
3.	Introduc	ction to cutting machines -Types and functions of cutting machines - st	raigł	nt	3
	knife, ro	ound knife, band knife, cutting machines - Notches, drills, die cutting mac	chine	es	-
	- Compi	Iterized cutting machines -maintenance of cutting machines - common d	efect	ts	
	in cuttin	g & their remedies.			

4.	Types of needles - Parts of needles and their function - Needle size -sewing thread -	3
	properties of sewing threads - ticket number - fabric sewability. Seam quality - effect	
	of stitch type on seam quality; Selection of seam and stitch	
5.	Federal classification of seam and stitches - Basic parts of sewing machine	2
6.	Needle - Bobbin case /Bobbin hook, Loopers - Loop spreader - Threading fingers - Throat plate - Tongue chaining plates - Take-up devices.	2
7.	Sewing Technology: feed systems, , machinery and equipment, basic sewing machines, like general sewing, over locking, safety stitching, blind stitching, button holes, bartacking, & button sewing, special sewing machines like three thread over lock with a microprocessor, Sewing.	2
8.	Problems, slipped stitches, staggered stitches, etc.	2
9.	Fusing Technology: Construction of Fusible, Fusing process, Fusing machinery, quality control	2
10.	Pressing Technology: Classification, components of Pressing, machinery and equipments viz. Hand irons, dry iron, electric steam iron, under pressing, top pressing, scissors press, Carousel machines, Steam dolly, tunnel finishing, controls, handling systems, boiler room.	2
11.	Garment Finishing and Inspections: Attaching buttons, marking, sewing labels, cleaning, final touch, fitting quality, live models, measurements, viewing the garments, quality standards.	2
12.	Production Technology: Manual systems, making through, section system, progressive bundle system, straight line system, mechanical transport systems, selective conveyor belt system, unit production system, quick response sewing system. Ware Housing: Handling equipment, storage equipment, packing equipment. Basic Pattern Making: Measurement Taking - Size chart and Measuring of Sizes. Definition of various garments parts & positions. Methods: Bespoke method & Industrial method (Using Blocks ) - Basic block construction - Block preparation & correction. Figure analysis: Body ideals, body proportion, height, weight distribution, body parts, individual figure analysis, study of body measurement of all age groups. Preparation of basic blocks, muslin pattern, commercial pattern, sizes and its understanding, fabric preparation for garment construction. CAD/CAM in Garment Manufacturing	3
- 10	Merchandising:	45
13.	Sourcing of textiles materials; Inventory planning and marketing of final products; Techniques and principles of merchandising; Merchandising according to domestic and international demand, requirements and supply; Application of information technology in merchandising; Costing with respect to export and domestic market	15

1.	<ul> <li>Introduction to the green field projects and global nature of the projects; Impact of currency fluctuations on Project justification and cash flows and Concepts of "Quality by Design" including typical design deliverables and understanding constructability, operability and maintainability during all stages of project execution. Meaning of Project Engineering, various stages of project implementation.</li> </ul>				4	
2.	<ul> <li>Relationship between price of a product and project cost and cost of production, EV Analysis.</li> <li>Elements of cost of production, monitoring of the same in a plant, Meaning of Administrative expenses, sales expenses etc. Introduction to various components of project cost and their estimation. Introduction to concept of Inflation, location index and their use in estimating plant and machinery cost. Various cost indices, Broject financing, debt: equity ratio, promoters, contributors, shareholders</li> </ul>					
3.	<ul> <li>Project financing, debt: equity ratio, promoters, contributors, shareholders contribution, source of finance, time value of money. Concept of interest, time value of money, selection of various alternative equipment or system based on this concept. Indian norms, EMI calculations. Depreciation concept, Indian norms and their utility in estimate of working results of project. Working capital concept and its relevance to project.</li> </ul>					
4.	<ul> <li>Estimate of working results of proposed project. Capacity utilization, Gross profit, operating profit, profit before tax, Corporate tax, dividend, Net cash accruals. Project evaluation: Cumulative cash flow analysis Break-Even analysis, incremental analysis, various ratios analysis, Discounted cash flow analysis</li> </ul>					
5.	Process	Selection, Site Selection, Feasibility Report			2	

6.	Project: Conception to Commissioning: milestones, Project execution as conglomeration of technical and nontechnical activities, contractual details. Contract: Meaning, contents, Types of contract. Lump- sum Turnkey (LSTK), Eng, Procurement and Construction(EPC), Eng, Procurement and Construction Management (EPCM). Mergers and Acquisitions	5				
7.	PERT, CPM, bar charts and network diagrams	4

#### Semester V

Cours	e Code:	Course Title: PCC	Cred	its =	2	
		Chemical Reaction Engineering	L T F		Ρ	
Seme	ster: V	Total contact hours: 30	1	1	0	
		Course Outcomes (students will be able to)				
1	Describe	and discuss principles of various types of reactors. (K3)				
2	Calculate	rates of reactions based on given reaction scheme. (K3)				
3	3 <b>Design</b> various components of reactors used in industrial practice. (K3)					
4	Compare	various reactors and select an appropriate reactor for a given situation.	(K4)			
5	Describe	and discuss principles of various types of reactors. (K2)				
		List of Prerequisite Courses				
		Physical Chemistry I and II, Transport Phenomena				
		List of Courses where this course will be prerequisite				
-	En	vironmental Engineering and Process Safety, Chemical Project Economic	S			
-		Description of relevance of this course in the B.Tech. Program				
com chem pl Mine an	commercial scale. This course is very relevant but not limited to the following industries: Inorganic chemicals, organic chemicals, petroleum & petrochemicals, Pulp & paper, Pigments & paints, rubber, plastics, synthetic fibres, Foods, Dyes and intermediates, Oils, oleo chemicals, and surfactants, Minerals, clean sing agents, Polymers and textiles, Biochemicals and biotechnology, pharmaceuticals and drugs. Microelectronics, energy from conventional and non-conventional resources. Metals					
Sr.		Course Contents (Topics and subtopics)		Re	qd.	
no				hr	S	
1	Kinetics o reactors i	f homogeneous reactions, Interpretation of batch reactor data, Single id ncluding design aspects	eal		8	
2	Multiple	reactions, Temperature, and pressure effects			3	
3	Introduct	ion to Non ideal flow, RTD measurements, Models to predict conversion	s		2	
4	Homoger	neous and Heterogeneous Catalysis, Kinetics of Solid Catalyzed Reactions			8	
	Design of gas – solid catalytic reactors					
5	Introduct	ion to Multiphase reactors			4	
6	Mass trar	nsfer with chemical Reactions: Regimes of operation and Model contacto	ors		5	
	ſ	List of Textbooks				
1	Elements	of Chemical Reaction Engineering – H.Scott Fogler				
		List of Additional Reading Material / Reference Books

		Description of relevance of this course in the B.Tech. Program			
Bei	ng initial	stage of wet processing the knowledge on pre-treatment is important to u	unde	rsta	nd
		further processing and testing			
-	1				
Sr No		Course Contents (Topics and subtopics)		R	eqd. Hrs
1	Stain re	moval by spotting, chemicals used and methods of stain removing.			4
2	Methoo qualitat loss in v	ls of Desizing of cotton woven fabric – acidic, enzymatic, and oxidative and quantitative evaluation of desizing efficiency- TEGEWA scale stain veight, water absorbency.	tive, iing,		4
3	<ul> <li>3 Scouring of cotton-open boil, pressure boil; Scouring of knitted cotton fabric – conventional and bio-scouring; Evaluation of scouring efficiency-Drave's test, sinking time, wicking property, loss in weight, core alkali determination – boil fabric and check pH, phenolphthalein.</li> </ul>				8
4	4 Bleaching of cotton with oxidative and reductive bleaching agent, Scouring and bleaching of polyester/cotton blends.			4	
5	Scourin	g and bleaching of wool, Degumming and Bleaching of Silk			4
6	Drumming and weight reduction of polyester fabric, Bleaching of polyester with hydrogen peroxide and nylon with sodium chlorite.				4
7	<ul> <li>7 Evaluation of bleaching efficiency – whiteness index and bleach clean-up (peroxide killer – enzymatic and reducing agent).</li> </ul>			8	

8	Mercerisation of cotton with and without tension, Evaluation of mercerization -	4
	Shrinkage, Barium Activity no., dye uptake, strength and elongation; microscopic	
	observation.	
9	Assessment of cotton for degradation by Methylene Blue Absorption.	4
10	Application of OBA/FBA on natural and synthetic fabrics and evaluation of fabric for	
	whiteness index – exhaust and pad application	4
11	Pre-treatment by semi-continuous process – combined desizing, scouring, bleaching;	8
	Pre-treatment by continuous process – separate and combined scouring, bleaching	
12	To study effect of heat setting on dye uptake, dimensional stability and strength	4

		Description of relevance of this course in the B.Tech. Program				
Stude proper	Students will have a better understanding of the structure of textile fibres, yarns and fabrics, their properties as well as the important concept of textile physics and testing, which will help to measure different properties of textile materials.					
Sr. No.		Course Contents (Topics and subtopics)			Reqd. hrs	
1	Fine Stru molecula technica associate mean lei fineness, fineness,	acture of fibre; molecular chain properties, crystallinity, the orienta ar chains and their effect on fibre properties. Fibre length and its distri l importance of fibre length, methods of measurement of fibre leng ed parameters, Baer-Sorter diagram, HVI, span length and effective ngth, uniformity ratio and index and Fibre Quality Index. Definition of technical significance of fibre fineness, principles of measurement of maturity of cotton.	tion butic th a leng of fib of fib	of on, nd th, ore ore	10	
2	Yarn line measure and pac retractio continuc	ar density - direct and indirect system, conversion from one system to a ment of yarn count, linear density of ply and cable structure, yarn dia king density. Definition of twist, twist direction, twist contraction n, measurement of twist, twist factor, effect of twist on strength of yar ous and staple), effect of twist on yarn diameter and packing density.	inoth amet on a n (bo	ner ter nd oth	9	
3	Open pa irregular and long	cking and hexagonal close packing; Fibre migration in yarn. Various trities in yarn, limit irregularity, irregularity index, causes of irregularity, -term irregularity, variance - length curves, hairiness index, Classimat f	ypes , sho aults	of rt- 5.	7	
4	4 Length, width, thickness, areal density of fabrics, porter, shots, thread density, cover factor - definition and measurement. Fabric stiffness, drape-definitions, measurement, factors affecting these properties. Air permeability, water permeability and thermal transmission property of fabrics, factors affecting those properties.				7	

5	Woven cloth setting theories, elements of woven fabric geometry; cover factor, ends and picks, count, crimp and weight relationship of similar fabrics. Pierce simple geometry of plain weave, derivation of basic equations, practical application of cloth geometry crimp interchange.	7
6	Optical properties of textiles; colour, lustre, birefringence, dichroic ratio, fibre friction - its role and measurement; Static Electricity - its generation, measurement, effect in processing. New methods of measurement of fabric hand (KES, FAST etc.).	5
