VISION

We shall perennially strive to be a vibrant institute with continuously evolving curricula to brighten the future of the chemical, biological, materials and energy industries of the nation, and rank amongst the very best in the world through active participation and scholarship of our faculty, students and alumni. We shall be creators of sprouting knowledge and design cuttingedge technologies that will have the greatest impact on society and benefit mankind at large.

MISSION

We shall generate and sustain an atmosphere conducive to germinating new knowledge at every available opportunity. The education we shall impart will enable our students to devise new solutions to meet the needs of all segments of society with regard to material and energy, while protecting the environment and conserving the natural resources. Our endeavours, while extending well beyond the confines of the classroom, will aim to enhance public welfare and our attempts to disseminate knowledge will spread to a greater multi- and cross-disciplinary platform to conduct research, discovery, technology development, service to industry and entrepreneurship, in consonance with India's aspirations to be a welfare state. We will team scientists and engineers with professionals in other disciplines to arrive at better solutions. We will provide all our students with a strong foundation to encourage them to be our ambassadors in the professional activities that they choose to undertake in service of society at national and international levels. Through our vision, we will serve the profession and society and strive to reach the summit as a team, and ultimately serve as role models to the younger generation.

Vice Chancellor's Message

My dear present and future fellow stake holders of the Institute of Chemical Technology, I am very happy of having this opportunity to address you all. Institute of Chemical Technology, as you all know is a pioneering Institute of our nation and I am very happy to know that you all are part of this legacy. The Institute has a rich history of producing capable, competent and socially aware engineers and entrepreneurs and we all are extremely proud of their contribution to the nation building. Now, that I have been given the responsibility of heading and leading this institute, I have a fairly simple message to you all. Take pride in the work you do and find fun and enjoyment in that work. Also, feel proud of the fact that each one of you, in your own small and big way are contributing to this exciting process of nation building. ICT is committed to evolving a sustainable eco-system for the generation of new ideas to find simple implementable solutions to the industrial, agricultural and in general societal problems. Pushing the frontiers of knowledge exploiting the principles in the field of chemical sciences is the path we all have willingly and consciously chosen. Let us all give our best and also let the better not be the enemy of the best. The field of chemical sciences, which originated from the field of industrial chemistry in the past, has spread its wings exploring emerging areas of bio-technology, nano sciences, materials engineering, health and medicinal sciences (drugs, artificial organs and biological processes), agricultural sciences and many more. We all should be very happy of the fact that ICT has always been a step ahead and has been a trend setter in many of these emerging areas of chemical sciences and we all should continue to do so, as that has been our legacy since our beginning in 1933. The organic and extremely close linkages with the industry and the active participation and the involvement of our alumni has substantially contributed to this growth and also this direction of our efforts. The term chosen by our Alumni Association of Metamorphosis aptly describes our future direction and path. We should continue our efforts and address the issues of sustainability of our profession and knowledge and keep evolving and coming out even stronger. The role of innovation in this is very relevant and crucial. ICT has rightly chosen the focus on innovation; translating the fundamental and applied research carried out by its departments and centres in to sustainable process, products and services, which are beneficial to the man-kind in general. Our two new campuses, ICT Marthwada, Jalna Campus and ICT-IOC Bhuvaneswar Campus have started with a clean slate and have explored innovation in education by adapting a revolutionary course structure for integrated M. Tech. programme. The students graduating from these campuses would have had significant industrial exposure and will be ready to contribute to the industry from day one. They all should feel extremely fortunate to be a part of this exciting new endeavour. To sum-up, I can assure you, that once, you are a part of this Institute as a student admitted through our admission process or a faculty or a support staff, institute is committed to your well-fare and overall development and progress and will explore every possible way to keep you happy, so that you can continue to contribute to the development of this great Institute.

Department of **CHEMICAL ENGINEERING**

PROF. ASHWIN W. PATWARDHAN

*B. Chem. Eng., S.M. (MIT, USA),
Ph. D. (Tech.) in Chemical Engineering
Professor of Chemical Engineering*

Head of the Department

**PROF. ASHWIN W. PATWARDHAN**

B. Chem. Eng., S.M. (MIT, USA),
Ph. D. (Tech.) in Chemical Engineering

Professor of Chemical Engineering

Head of the Department

SUBJECTS TAUGHT:

Momentum and Mass Transfer, Advanced Reaction Engineering, Material and Energy Balance Calculations, Advanced Separation Processes

RESEARCH INTERESTS:

Computational Fluid Dynamics, Transport Phenomena, Membrane Separation Processes, Liquid Extraction

Recognized Research Guide for

Ph. D. (Tech.) as well as Ph. D. (Sci.)

Guided students: Ph.D.23, Masters: 51

Total Research Publications - International: 122

Total Citations = 1900; H-Index = 21

NATIONAL AND INTERNATIONAL AWARDS:

Fellow, Maharashtra Academy of Sciences 2012; Herdillia Award of I. I. Ch. E. for excellence in Basic Research 2013. Prof. M. M. Sharma Science and Technology Award 2016, Fellow, Indian National Academy of Engineering, 2019.

PROF. S. S. BHAGWAT

B. Chem. Eng., M.Chem.Eng., Ph.D. (Tech.)

Professor of Chemical Engineering

Co-ordinator - PGDCTM, Centre of Excellence- Process Intensification, Dean IQAC

SUBJECTS TAUGHT :

Chemical Engineering Thermodynamics I, Chemical Engineering Thermodynamics II, Interfacial Science and Engineering.

RESEARCH INTERESTS :

Interfacial Science and Engineering, Microemulsions, Energy and Exergy Engineering, Absorption Cycles, Utilization of lowgrade energy, applications of artificial neural networks

Recognized Research guide for

Ph.D. (Tech.) in Chemical Engineering, Bioprocess Technology, Ph.D. (Science) in Chemistry

Guided students: Ph.D. 39, Masters: 80;

Total Research Publications:

National: 03, International: 76

Patents: 11, H-Index: 12, Citations: 510

NATIONAL AND INTERNATIONAL AWARDS:

IICChE NOCIL Award for excellence in design or Development of Process Plant or Equipment in 2012

Bry-Air asia award for the HVAC 2013

INSA Best teacher award, 2016

UDCT Alumni Association Distinguished Alumnus Award 2019

**Dr. V. H. DALVI**

B.Chem. Eng., M.S., P.D.ENG. (Enschede, The Netherlands),
Ph.D. (Austin, USA)

**R.A. Mashelkar Assistant Professor,
Co-coordinator, DBT-ICT Center for Energy
Biosciences**

SUBJECTS TAUGHT:

Mathematical methods in Chemical Engineering, Chemical Engineering Laboratory, Advanced Mass Transfer, Chemical Process Control, Industrial Engineering and Chemistry, Simulation Laboratory, Data Analysis

RESEARCH INTERESTS :

Molecular Simulations, Process Simulations, Solar Thermal Systems, Statistical Thermodynamics, Anaerobic Digestion, Energy Engineering.

Recognized Research guide for

Ph.D. (Tech) in Chemical Engineering

Guided students: Ph.D. : 2 (coguided) + 5 (ongoing)

Masters: 10 + 4 (ongoing)

Total Research Publications: International: 17

Patents: 2 (Granted) 3 (Under Review)

PROF. V. G. GAIKAR, F.N.A.E.

B.Chem.Eng, M.Chem.Eng., Ph.D. (Tech.)

**Bharat Petroleum Distinguished Professor of
Chemical Engineering and Former Co-ordinator DBT-
ICT Centre for Energy Biosciences,**

**Former Vice Chancellor, Dr. Babasaheb Ambedkar
Technological University, Lonere**

SUBJECTS TAUGHT:

Process Development and Engineering, BioReaction Engineering, BioSystem Engineering, Chemical Process control Advanced Separation Processes

RESEARCH INTERESTS :

Renewable Energy Resources, Reactive Separation Processes, Molecular Simulation for Reactive Sorption and Metal Ion Complexation, Interfacial Science and Engineering and Hydrotropy, Complex Fluid Behaviour, Synthesis of nanoparticles and development of applications.

Recognized Research guide for Ph.D. (Tech.) in Chemical Engineering, Bioprocess Technology, Ph.D. (Science) in Chemistry, Green Technology.

Guided students: Ph.D. 49, Masters: 78

Total Research Publications: National: 04, International: 183

Patents: 11, H-Index: 28, Citations: 2602

NATIONAL AND INTERNATIONAL AWARDS:

- Fellow, Maharashtra Academy of Sciences,(2004)
- Eminent Engineer, Institution of Engineers (India), and Acharya P C Ray Memorial Lecture, Institution of Engineers (India), (2019)
- UAA Distinguished Alumnus Award, ICT (2016)
- IICHE - D.O.S.T. Dr. S.K. Sharma Medal (2014)
- IICHE - CHEMCON Distinguished Speaker Award (2014)
- IICHE - Herdillia Award for Excellence in Basic Research in Chemical Engineering (2004),
- Best Teacher Award, University of Mumbai (2002)
- UGC Carrer Award, 1994,
- INSA Young Scientist, Indian National Science Academy (1992), Young Associate, Indian Academy of Sciences.(1992)

**PROF. PUSHPITO KUMAR GHOSH***Ph.D. (Chemistry), Princeton University, U.S.A.*

K. V. Mariwala-J. B. Joshi Distinguished Professor of Chemical Engineering; Emeritus Professor, CSMCRI-AcSIR; Former Director, CSIR-Central Salt and Marine Chemicals Research Institute, Bhavnagar

SUBJECTS TAUGHT:

Innovations in Chemical Technology (UG), Industrial and Engineering Chemistry (Inorganic Chemicals) (UG), Renewable Energy Sources (PG); Safety and Risk Management (PG)

RESEARCH INTERESTS:

Salt and Marine Chemicals; Membrane-based processes; Green Chemistry; Renewable Energy; Chemical Technology; Analytical Studies

Recognized Research Guide for:

ICT (Chem. Engg. and Green Technology); AcSIR, New Delhi

Guided students: Ph.D. 8, Masters: 2

Total Research Publications:

National: 4, International: 85

Citation Index: 4701; H-Index: 35, Patents: 19

NATIONAL AND INTERNATIONAL AWARDS:

Fellow of Indian Academy of Science; DaimlerChrysler Environmental Leadership Award; Indian Chemical Council's Lifetime Achievement Award; Indian Desalination Association's Lifetime Achievement Award (2015); MRSI Silver Jubilee Medal (2014); 2010 VASVIK Award, Chemical Science and Technology (awarded in 2013); CIPET National Award (2012); CSIR Rural Technology Award; Chemcon Distinguished Speaker Award (2017).

Dr. PARAG R. GOGATE*B. Chem. Eng., M. Chem. Eng., Ph.D. (Tech.)***Associate Professor of Chemical Engineering**

Course Co-ordinator Bio-process Technology Certificate course on Practice of Chemical Technology,

Co-ordinator Information Processing Centre

SUBJECTS TAUGHT:

Chemical Reaction Engineering, Cavitation for Green Processes, Process Calculations, Engineering Applications of Digital Computers

RESEARCH INTERESTS:

Sonochemistry, Hydrodynamic Cavitation, Process Intensification, Water and Wastewater Treatment, Enzymatic Reactions, Polymer Chemistry, Advanced Oxidation Processes

Recognized Research Guide for: Ph.D. (Tech.) in Chemical Engineering, Green Technology, Bioprocess Technology; Masters in Chemical Engineering, Green Technology, Bioprocess Technology

Guided students: Ph.D. 16, Masters: 50

Total Research Publications: National: 17, International: 253,

Citations as per Scopus: 14400+ H-index : 64

NATIONAL AND INTERNATIONAL AWARDS:

Anil Kumar Bose Medal of the Indian National Science Academy (INSA), 2011; Young Associate of Indian National Academy of Engineering, 2012; Chartered Engineer and Member, Institution of Chemical Engineers, UK, 2013; The SCEJ Award for Outstanding Asian Researcher and Engineer given by The Society of Chemical Engineers, Japan, 2013; Hindustan Lever Biennial Award for the Most Outstanding Chemical Engineer of the Year Under The Age Of 45 Years of Indian Institute of Chemical Engineers, 2013; Fellow, Maharashtra Academy of Sciences, 2014; Outstanding Professor Award given by Indian Specialty Chemicals Manufacturing Association, 2015. Maharashtra State National Award for Best Research work done by teachers of engineering colleges, Indian society for technical education, New Delhi - 2016. Prof. M M Sharma award for Science and Technology given by Marathi Vidnyan Parishad, Mumbai, 2017; Most Outstanding Faculty Research Award in the Chemical Engineering Discipline, Careers 360, 2018

**Dr. SACHIN JADHAV***Ph.D. (Tech.) in Chemical Engineering***Assistant Professor in Chemical Engineering****SUBJECTS TAUGHT:**

Chemical Engineering Laboratory

RESEARCH INTERESTS:

Water and Wastewater Treatment, Membrane-based Separation, Nanomaterials Synthesis and their Applications, Adsorption-based Separation, Waste Valorization, Petrochemicals, Chemical and Enzymatic Kinetics, Process Modeling and Simulation, Drying Technology, Industrial Crystallization

Recognized Research Guide for:**Guided students:** Ph.D. 0, Masters: 0**Total Research Publications-**

National: 01, International: 09

Citation : 184; H-Index: 05

Dr. RATNESH JAIN (AVHUMBOLDT FELLOW)*M.Pharm, Ph.D.(Tech) Pharmaceutics***UGC Assistant Professor and Ramalingaswami Fellow****SUBJECTS TAUGHT:**

Biopharmaceutical Engineering, Introduction to Biopharmaceutical Manufacturing, Research Methodology, Biomaterials

RESEARCH INTERESTS:

Biosimilar/Biologics Characterization, Biopharmaceutical/Pharmaceutical Product Development using Traditional, Microfluidics and 3D Printing Technology, Nanomedicine, Cell Culture engineering

Recognized Research Guide for Ph.D. (Tech.) in Pharmaceutics, Green Technology

M.Tech in Bioprocess Technology, Green Technology; M Chem Engg in Chemical Engineering

Guided students: Ph.D. 5, Masters: 21**Total Research Publications-**

**PROFESSOR A. M. LALI***B. Chem., M. Chem., Ph.D. (Tech.) (Chem. Eng.)***Professor of Chemical Engineering****SUBJECTS TAUGHT:**

Bioprocess Simulation Modeling and Bioreactor Design,
Instrumentation and Process Control, Adsorptive Separations
Statistical Methods.

RESEARCH INTERESTS :

Bioenergy, Biofuels and biomass to other chemicals, Purification of Proteins, nucleic acids and other Biomolecules, natural and synthetic APIs high value organic/inorganic chemicals, Continuous chromatography, Modeling and Adsorptive separations, Biocatalysis and Bio transformations, Bioreactor design, Mixing and dynamics of solid liquid fluidized bed, Dynamics of gas-solid circulating fluidized bed, Process integration and intensification, Process development, characterization and scale up.

Recognized Research guide for Ph.D.(Tech.) in Chem. Engg.,
Bioprocess Technology, Ph.D.(Sci.) in Chemistry, Biotechnology.

Guided students: Ph.D. Guided: 60, Masters: Guided: 75

Dean (Infrastructure and Campus Development)**

SUBJECTS TAUGHT:

Organic Chemistry, Organometallic Chemistry, Catalysis

RESEARCH INTERESTS:Catalysis, Ionic Liquids, Nanomaterials, Enzymatic Catalysis, Coupling Reactions, Amination, Reactions using CO, CO₂ and hydrogen.

Recognized Research Guide for: Chemistry, Green Chemistry and Technology, Biotech Sciences, NanoScience and Nanotechnology.
Guided students: Ph.D. 44, Masters: M.Sc. 23; M.Tech. 19

Total Research Publications:

National: 02, International: 421 + 22 Book chapters

Citations: 14200 H-Index : 56

Patents : Granted: 24; Filed: 12

NATIONAL AND INTERNATIONAL AWARDS:

Elected Fellow of Maharashtra Academy of Sciences (F.M.A.Sc.);
Fellow of the Royal Society of Chemistry, UK (FRSC); RSC-PTG best paper award by Royal Society of Chemistry 2011; Bronze Medal for Contributions in Research by Chemical Research Society of India, 2012; ISCMA Outstanding Professor Award by Indian Specialty Chemical Manufacturers Association for excellence in academic field for the year 2012 and in 2015; Prof. M.M. Sharma Science and Technology Award for contributions in research by Marathi Vidyan Parishad, 2014.

Dr. SANGHAMITRA CHATTERJEE

M.Sc., Ph.D.

DST INSPIRE Faculty**SUBJECTS TAUGHT:**

Advanced Spectroscopy, Pericyclic Reactions, Analytical Chemistry, Physical/Analytical Chemistry Laboratory, Inorganic Chemistry Laboratory, Analytical Chemistry Laboratory, Organic Chemistry Laboratory and Organic Chemistry.

RESEARCH INTERESTS:

Organic Electrochemistry, Biomedical applications of nanomaterial modified sensors, Materials science and Nanotechnology, Electrochemical sensing techniques for clinical diagnostics and environmental monitoring, Development of sensors for biomolecules, drugs and doping agents, Electrochemical catalysis, Biosensors and arrays.

Recognized Research Guide for Ph.D. Chemistry

Guided students Masters: 07

**NATIONAL AND INTERNATIONAL AWARDS:**

DST-Inspire Faculty Scheme Award, Piscopia Marie Curie Fellowship Programme for Postdoctoral Research, Post-Doctoral Fellowship for Women by University Grants Commission, Emerging Scientist Award in the 7th Annual Research and Innovation Week, Ontario, Canada, Post-Doctoral Fellowship from Natural Sciences and Engineering Research Council (NSERC) Discovery Grant.

Dr. S. G. DAWANDE

M. Sc., Ph. D.

Assistant Professor of Organic Chemistry**SUBJECTS TAUGHT:**

Organic Chemistry (B. Pharm), Organic Chemistry (Chem. Eng.), Free Radicals and Photochemistry (M. Sc. Chem.), Organic Chemistry Laboratory (B. Pharm), Organic Chemistry Laboratory (Chem. Eng.), Organic Chemistry Laboratory (B. Tech.), Organic Chemistry Laboratory (M. Sc. Chemistry).

RESEARCH INTERESTS:

Mainly focused on Organic synthesis, Catalysis and Medicinal Chemistry through; Transition Metal Catalysis, Organocatalysis, Asymmetric Synthesis, Natural Product Synthesis, Green Chemistry

Recognized Research Guide for: Ph.D. Chemistry,

Guided students: Ph.D.: 0; Masters: 08

Ph.D. (University of York, U.K.),
Alexander von Humboldt Fellow

UGC-FRP Assistant Professor

Former Deputy Director, ICT-Mumbai IndianOil Campus,
Bhubaneswar

SUBJECTS TAUGHT:

Organic Chemistry Natural Product Heterocyclic Chemistry
Organic Chemistry Practicals and Analytical Chemistry

RESEARCH INTERESTS:

Palladium catalysis, Nucleoside modification, Heteroarene modification, Commercial scale process optimization, Drugs synthesis, New product development

Recognized Research Guide for Ph.D. Organic Chemistry

Guided students: Ph.D. 7, Masters: 28

TOTAL RESEARCH PUBLICATIONS-

National: 2, International: 81 + 10 book chapters

Fellow Maharashtra Academy of Sciences 2016, Associate Editor of Royal Society of Chemistry Journal RSC Advances 2015-17. Prof. N. R. Kamath book award 2018, C. B. Murarka Best Assistant Professor award 2019

Dr. P. M. MORE

M.Sc., Ph.D.

Assistant Professor of Analytical Chemistry**SUBJECTS TAUGHT:**

Analytical Chemistry, Analytical and Physical Chemistry Lab, Physical Pharmacy Lab., Instrumental methods Lab. Physical Chemistry Lab.

RESEARCH INTERESTS:

Heterogeneous Catalysis, Synthesis of various mixed metals based catalysts using different methods for selective oxidations and environmental application. Total oxidation of volatile organic compound using non-noble metal based catalyst. Development of non-noble metal based diesel exhaust oxidation catalyst.

Guided students : Ph.D.: - 0, Masters: 03,

Total Research Publications : National: 01, International: 12,

NATIONAL AND INTERNATIONAL AWARDS:

- Received “Expert Featured Research Article Honorarium” of \$ 500 for an article entitled “Properties of Vegetal Oil Based creams in skin care” the article was published in Cosmetics and Toiletries;
- Fellow of Maharashtra academy of Sciences.

**Dr. SHRAEEDHA TIWARI**

Ph.D.

Assistant Professor of Inorganic and Physical Chemistry**SUBJECTS TAUGHT:**

Physical Chemistry, Physical Pharmacy, Analytical Chemistry, Instrumental Analysis, Surface and Interfacial Chemistry

RESEARCH INTERESTS:

Kinetic and mechanistic investigation of organic reactions, interfacial reactions, “on water” chemistry, reactions in confined media, physical and chemical properties of ionic liquids, space- and time-resolved spectroscopic techniques, asymmetric amplification, transport phenomena in reactions

PROFILE OF DEPARTMENTS AND CENTRES OF EXCELLENCE

DEPARTMENT OF CHEMICAL ENGINEERING

VISION :

We will strive to be a vibrant department, with continuously evolving curricula and programmes that will charter the future of chemical, biological, materials and energy industries of the nation and be on par with the very best in the world through the participation and scholarship of our faculty, and students who will be torch bearers in education and research and have great impact in solving societal needs for the benefit of mankind at large.

MISSION :

We will create an atmosphere conducive to generate new knowledge at every opportunity for our students at large. Our education will enable new chemical engineering solutions to meet the need of all segments of society with regard to material and energy, while protecting the environment and conserving the natural resources. Our endeavors will enhance the public welfare. Our activities will not be limited to class-rooms but will extend to a greater multi and cross disciplinary platform to conduct research, discovery, technology development, service to industry and entrepreneurship in consonance with India's aspiration to be a welfare state. We will team chemical engineers with professionals in other disciplines to arrive at better solutions. We will provide all students with a strong foundation in chemical engineering and applied sciences to encourage them to be our ambassadors at national and international level, in whatever professional activity they undertake to serve the society. Through our vision, we will serve the chemical engineering profession and society and strive to reach the summit as a team and stake-holders and as role models to the younger generation.

What is Chemical Engineering?

Chemical engineering is one of the most versatile branch of engineering that applies scientific and mathematical principles to design and develop processes by which available chemicals can be converted into a variety of useful products. Chemical Engineering is applicable to a wide range of technologies, including the production of energy, materials, electronics, and pharmaceuticals, the processing of food, and environmental protection as well as remediation. The development of high quality materials, products and large scale processes is the testimony

of an industrialized nation and every nation tries to build its foundation on the strong pillars of Chemical Engineering profession which cuts across several chartered and unchartered territories of human civilization. Thus Chemical engineering is practised from nano scale to mega scale, from food / pharma to nuclear engineering from mineral/ mining to silicon (high purity grade). The subjects of energy, environment and sustainability are very much integral part of Chemical Engineering as Chemical engineering fundamentals are used to solve problems related to pollution, hunger and sustainable living (housing and modern farming).

MODERN CHEMICAL ENGINEERING

The modern discipline of chemical engineering encompasses much more than just process engineering. Chemical Engineering is highly science based discipline and is the most versatile and accommodative branch of engineering among all. Chemical Engineering work on scales from atom to atmosphere and are involved in all possible human activities which process materials and energy. Human body is the best example of applications of principles of Chemical Engineering. Kitchen uses all sorts of unit operations familiar to Chemical Engineering. All transport phenomena are unified due to Chemical Engineering. Chemical engineers are now engaged in the development and production of a diverse range of products, as well as in commodity and specialty chemicals. These products include high performance materials needed for aerospace, automotive, biomedical, electronic, environmental, and space and military applications. Examples include ultra-strong fibres, fabrics, adhesives and composites for vehicles, bio-compatible materials for implants and prosthetics, gels for medical applications, pharmaceuticals, and films with special dielectric, optical, or spectroscopic properties for opto-electronic devices. Additionally, chemical engineering is often intertwined with biology and biomedical engineering. Many chemical engineers work on biological projects such as understanding biopolymers (proteins) and mapping the human genome.

A new paradigm of “borderless chemical engineering science” is emerging. The demands from the society on ‘cleaner’ technologies rather ‘clean-up’ technologies, the emergence of ‘performance chemicals and materials’ etc., is driving the profession towards achieving a symbiotic relationship with other disciplines. It has always been dealing with pollution prevention, atom economy, recycle, as the Solvay process would suggest. The term ‘green chemical engineering’ as a mantra for sustainable development and responsible care is at the centre-stage for all activities related to

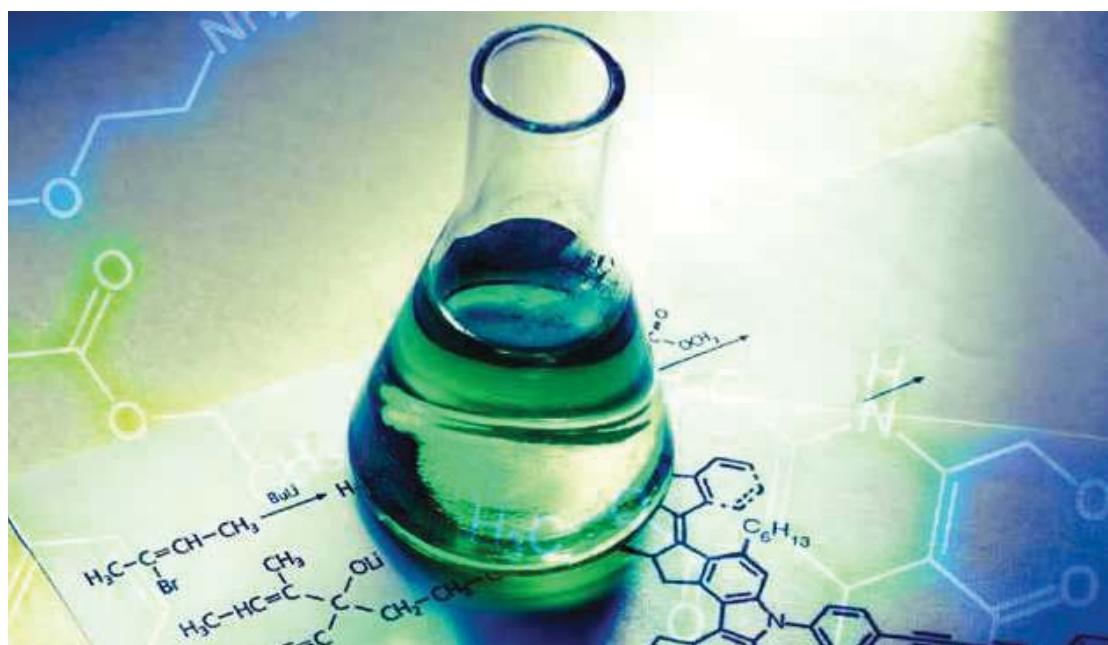

chemical engineering. Future course of an engineering discipline is reflected in current research areas within its folds. The expedition ahead for Chemical Engineering, based on the research profile of Chemical Engineering schools world over suggests that it is embracing biology, bio-engineering, tissue engineering, bio-processing, green chemistry and green engineering, and material science and nanotechnology in a big way and has been a truly working on scales from atom to atmosphere. Readily available computing power is changing the nature of research activity forever. A high level of mathematics and computational methods are intertwined with chemical engineering. The advent of new measurement techniques is reducing the length scale of investigation to nano and molecular scales irreversibly in many cases. Chemical Engineering thus appears poised for a major expansion. Chemical engineers are getting directly involved in development of new products and new technologies which improve the quality of life which requires highly interdisciplinary work, new ways of treating diseases-a domain of medical practitioners only till very recently, and development of application specific materials and fluids with complex structure at various length scales.

Chemical Engineering is not just Chemistry but a discipline itself with own characteristics. A proficiency in basic sciences such as Chemistry, Physics, Biology, Mathematics and their applications is necessary to effectively conduct the molecular transformations at scales varying from thousands of tonnes to few kilograms per day in economically attractive and environmentally safe manner. Each reaction with unique characteristics gives challenging opportunities to conduct it at profitable scale to produce increasingly purer products as per market demands with minimum energy input in shortest time without producing waste or by-products. Each combination of Reaction and Reactor is, therefore, a challenge to the Chemical engineer to make it faster, simpler and cheaper.

Borderless and Versatile Engineering Profession

Over the few decades, Chemical Engineering has evolved developing interfaces with newer areas, including Biochemical Engineering, Nano Technology, and Energy Engineering taking advantage of developments in High performance computations, Electronics and Instrumentations and Information Processing. Although the basic responsibility of a Chemical engineer remains in design, testing, scale-up, operation and control of chemical plants, the interface helps the Chemical Engineers to enter into these newer areas at ease. Large Manufacturing facilities such as cements, petroleum refineries, oil and natural gas exploration and semiconductor Industries, biofuels and biotransformations, nuclear reactors, all involve Chemical engineering operations. Chemical engineers find good job opportunities in a wide spectrum of industries involving speciality chemicals, pharmaceuticals, drugs, polymers, textiles, paints, dyes, vegetable oils and foods.

Because of excellent analytical skills Chemical Engineers(CE) can work in areas from chemoinformatics to bioinformatics, drug delivery systems, molecular modelling, to handling systems from nanoscales to global scales for environmental impact and climate change. The versatility of Chemical Engineering education, therefore, makes a wide choice of career options available to the CE candidates. There is a huge scope for higher studies in Chemical Engineering because of highly science based discipline and requirement of RandD in the country. All B.Tech. courses in ICT have much wider base in Chemical Engineering including subjects like Material and Energy Balance, Separation Processes, Heat and Mass Transfer, Chemical Reaction Engineering, Thermodynamics, Process Control, Chemical Process Industries, Chemical Process Economics. Consequently, at Masters level ICT B.Tech. students from all specialisation are accepted for admissions in Western Universities and within ICT itself.

The Integrated Master of Technology with a major in Chemical Engineering and minor in other branches was thus conceived which also includes trimester system and two year's industrial/research internship. These innovative programmes will be offered at the IOC Bhubaneswar and Marathwada Campus at Jalna.

International Standing of Department

The Department of Chemical Engineering is the number one Chemical Engineering Department in the Country by all the standards: teaching, research and industrial relationship, as has been rated by the international surveys conducted by Professor Jude Sommerfield of Georgia Tech., USA since 1964 for every five year period as well as every year and also during the 5-year period during 2014 which included all IITs and IISc. Besides it is among top 10 Departments in the world and in terms of productivity as measured by papers per faculty per dollar spent, it is number one in the world. The number of papers published in peer reviewed journals per faculty is also the highest in India. The FIST programme of DST has revealed that the Chemical Engineering Department is the Best Department in all engineering Departments in India.

This is again the record which has been held due to the research contributions of faculty in international journals of repute. The value and impact of our research is reflected in highest number of papers per faculty member, highest impact factor per paper, and highest number of citations for papers of Chemical Engineering Department. The Department is recognized as the UGC Centre for Advanced Studies for a record time since 1989 and as UGC Networking Resource Centre in Chemical Engineering, since 2008; only one of its kind and further supported by DST-FIST programme with state-of-the-art research facilities.

The faculty has been acting as consultants to industry and the earnings are the highest for any engineering Department in India.

Connectivity with Industry

Collaborative Academic Programs have been initiated with international institutes such as Purdue University, Kansas University, University of Saskatchewan, ICGEB, and, CSIR labs. Many foreign universities have shown interest in collaborating with Chemical Engineering faculty, and the most striking is a string of Canadian Universities desirous of signing MOUs with this Department. The dual Ph.D. degree programme in Chemical Engineering with Michigan State University, USA is the highlight of this year.

Accolades and Awards

The last three Vice-Chancellors / Directors of ICT have been bestowed upon with Padma awards with Prof. Yadav being awarded Padmashree in Jan' 16. Two former Directors of CSIR labs are currently Distinguished Professors in Chemical Engineering Department which is also unique. A number of awards have come to the faculty members in Chemical Engineering including Jagdish Chandra Bose National Fellowship, fellowships of Indian National Science Academy, Indian Academy of Sciences, National Academy of Sciences in India, Indian National Academy of Engineering and Indian Institute of Chemical Engineers. Not only faculty members but students also have bagged a number of awards. Even home paper or design papers of the final year students have been repeatedly rated as the best by the Indian Institute of Chemical Engineers and the Ambuja Cement and Sir P. C. Ray Awards have come several times to ICT which itself is a record. All these awards recognize excellence in the field of Chemical Engineering. The ICT has also received the award for being 'The Best Industry Related Institute in Chemical Engineering' from the confederation of Indian Industries and the All India Institute of Technical Education.

Employment Opportunities

Our graduates, numbering over 30-35 per year are accepted with full fellowships in leading universities including MIT, Minnesota, UCB, Caltech, Wisconsin-Madison, Princeton, Stanford, Texas A and M, University of Texas, University of Delaware, Purdue University, and many more. All students are placed in some of the leading industries in India, with salaries ranging from Rs. 3.5 lakhs to Rs. 15.5 lakhs per annum and these are hard core industries and not the software companies. Several leading industrialists and owners of fortune-500 company owners are our graduates, including top planners and policy makers, who have been bestowed with Padma awards.

Research Interests of Faculty

The Chemical Engineering faculty has been well known for their publications in peer reviewed high impact factor journals, patents and industrial consultations in a variety of research interests.

Major Thrust of Research Areas : Development of Novel Reactors, Reactions and Separation Processes Analysis of Multiphase Phenomena, Computational Fluid Dynamics for Multiphase Systems, Novel Catalytic Materials and Processes, Surfactant Science and Hydrotropy, Organic Chemical Processes Development, Biotechnology and Downstream Processing, Adsorptive and Chromatographic Separations, Green Chemistry, Engineering and Technology, Cavitation Phenomena, Sonochemistry, Membrane Based Separation Processes, Bio-Technology and Bio-medicines, Environmental Protection and Safety, Nanoscience and Nano-Technology, Nano Technology, Materials Technology

In the global context, the priority research areas as identified by the Chemical Engineering Department are:

Multiphase reactions, multiphase reactors and separation processes

Energy engineering with an emphasis on the renewable energy resource

Laboratory and Research Facilities

All Chemical Engineering laboratories and faculty offices have been remodeled during past 5 years. The labs are equipped with state-of-the-art instruments and have gone a total face-lift. UG students are provided computational facility in the main laboratory, including latest software required for modeling and simulation. Some of the sophisticated equipment which have been

acquired and used continuously are: GC-MS, LC-MS, SEM, TEM, AFM, IC, FTIR, HP-TLC, HPLC, GC, XRD, DSC, DTA/TGA, AAS, Laser-Doppler anemometer, image analysers, pore and particle size analysers, autoclaves of different sizes and MOCs, catalyst screening bench-top autoclave assembly, supercritical fluid phase monitor and reactor, microwave reactors, computer workstations, laminar flow apparatus, fermenters, and many others. Advanced instrumental facilities have been created under industry sponsored projects as well. The new campuses will also be provided with sophisticated instrumental facilities including Ph.D. fellowships.

Fellowships

Twenty Ph.D. fellowships under ICT-DAE Centre for Chemical Engineering Education and Research. Several projects are secured by the faculty in the areas of expertise from central agencies such as DST, DBT, CSIR, including Indian and foreign companies; this number varies from year to year. Interested candidates must appear for the entrance examination for a Ph.D. degree, whether funded government or industry. For GATE qualified students fellowships are offered at the UGC rate and others as per the provision of the funding. No student is admitted to any Ph.D. programme.

Apart from Master of Chemical Engineering programme, the department also participates in two interdisciplinary M.Tech. courses - Perfume and Flavour Technology, Green Technology and Bioprocess Technology. At least 19 Masters fellowships offered for GATE qualified students in the first round and typically this number is around 30+ when the admissions are closed. Besides, about 10-15 M. Tech. students in Bioprocess Technology (with a special reference to downstream processing), Food Biotechnology, Pharmaceutical Biotechnology, Perfumery and Flavour Technology work under the guidance of Chemical Engineering faculty.

Interdisciplinary and Cross Disciplinary Programmes

Several faculty members guide Ph.D. students in all disciplines of Chemistry and Biotechnology, as well as in all branches of Chemical Technology on inter-disciplinary topics and several chemistry graduates have benefitted by their training in the Department of Chemical Engineering.

Visiting Faculty Endowments

There are several endowments created to invite the best of professionals and academics to the ICT. Some eminent faculty from institutes such as MIT, Purdue, Cambridge, Monash University, University of California, Berkeley, University of California, Santa Barbara, National University of Singapore, Montreal, University of Michigan, Michigan State University, University of Alberta,

RMIT Australia, IIT-Chicago, Cambridge University, University of Manchester, IIT-Bombay, IIT-Kanpur, IIT-Madras, National Chemical Laboratory, have taught UG and PG courses in ICT under these endowments.

These lectures form part of audit courses for research students. Besides, public lectures are organized under each endowment.

HOMI SETHNA ICT-DAE CENTRE FOR CHEMICAL ENGINEERING EDUCATION AND RESEARCH

Preamble:

The Institute of Chemical Technology (ICT) and the Department of Atomic Energy (DAE) signed a Memorandum of Agreement (MOA) in 2006 having far reaching benefits for Indian S and T, which was based on the excellent relation between these two organizations and successful completion of projects by ICT faculty of Chemical Engineering. The MOU covers the following activities.

- (A) Instituting an interdisciplinary Ph.D. programme in Chemical Engineering.
- (B) Undertaking RandD projects in the areas of common interests and related to nuclear fuel cycle and advanced technologies.

DAE Research Institutions, namely, Bhabha Atomic Research Centre (BARC) and Indira Gandhi Centre of Atomic Research (IGCAR) are premier multidisciplinary RandD organizations engaged in research with the objective of generating knowledge and techniques for nuclear power production, advancement of science, use of radioisotopes in industry, health and agriculture as well as research in frontier areas of science and technology. BARC and IGCAR have multi-disciplinary groups of experts who have contributed to the development of processes and technologies related to thermal and fast nuclear reactors, fuel cycle and related areas. BARC and IGCAR have pursued research and development in chemical engineering in a rigorous way for many years in the areas defined by DAE's mission oriented programmes as well as projects of national interest. BARC and IGCAR support academic programmes within the DAE and also in the academic institutions and research centres in various parts of the country.

ICT is one of the foremost academic institutions in India, and has the necessary infrastructure in terms of trained manpower (including students) and a long tradition of research and development in Chemical Engineering and Chemical Technology. ICT has also had long and fruitful experience of working with BARC and other units of DAE on research projects related to Chemical Engineering and process technologies and have completed them meeting the high standards expected by DAE. On the national level, ICT is a major resource Institution in terms of technology development and fundamental research at the cutting age on the global scale. They have also entered into an MoU with Homi Bhabha National Institute (HBNI) for collaborating on academic programs especially suited to the requirements of DAE institutions.

In the Xth and XIth Five Year Plan, BARC and ICT had undertaken a joint research programme encompassing several DAE research projects in the Chemical Engineering field. Through the Virtual Centre, called, DAE-ICT Centre for Knowledge Based Engineering, BARC scientists and ICT faculty have collaborated and very successfully completed several projects. In view of the success of the collaborative programme through the Centre for Knowledge Based Engineering, BARC and IGCAR proposed to enlarge the scope of collaboration by establishing the DAE-ICT Centre for Chemical Engineering Education and Research that will synergise the strengths of both these organisations. On the one hand, ICT has proven track record in training high quality manpower and in conducting research in Chemical Engineering and technology, on the other hand BARC and IGCAR have demonstrated over decades their ability to conduct multi-disciplinary, mission oriented RandD leading to a large number of indigenous and innovative chemical engineering processes, equipment and instruments, and technologies.

DAE has to develop several innovative technologies to tackle the problems of efficient nuclear fuel utilisation in the second and third stages of nuclear power programme. This requires a pool of qualified, motivated and talented young research scientists with multidisciplinary expertise. The number of Ph.D. level chemical engineers is small in this country and the number of chemical engineers entering DAE is even less. Thus, the number of Ph.D. scholars working on energy related programmes needs to be increased. Further, these scientists need to have wider knowledge of both basic sciences and allied engineering subjects besides chemical engineering, which is essential for the development of innovative technologies. However, the present education system imparts expertise only in selected areas. To satisfy the need of greater number of Ph.D. scholars well versed in basic sciences and chemical engineering, DAE and ICT wish to take an initiative for imparting doctoral education in chemical engineering with multidisciplinary character.

Scope of Collaboration

1. To provide doctoral degrees to promising candidates with talent and aptitude for carrying out advanced research and development activities in science and technology.
2. To furnish a multidisciplinary, flexible and innovative Ph.D. research programme in Chemical Engineering with special emphasis on :
 - (a) Acquisition of proficiency in research, knowledge, data generation and analysis, mathematical modeling, and management with sharpening skills in innovative experimental methods and problem-solving capabilities;
 - (b) Creation of a pool of young talented, dedicated and committed individuals with passion and involvement in pursuing research and development as a career;
 - (c) Inculcation of attitude, temper, and outlook for developing social commitment as well as high level of scientific ethics and integrity.
3. To evolve a symbiotic relationship between the ICT and DAE Institutions in such a way that it enables the Collaborative Programme to grow and develop, and in turn ensures that research projects of relevance to the objectives of DAE research institutions are integrated with creative and innovative content.
4. To select students on the basis of an all-India test and subsequent interview jointly conducted by ICT and BARC/IGCAR.
5. To promote effective linkages on a continuing basis between ICT, BARC and IGCAR and the Industry for joint research projects and training programmes and other academic activities related to these Institutes. The expertise and experience so gained shall be shared with other Universities in the country at large.
6. To disseminate the new knowledge in the form of publications, theses, seminars and conferences.

Ph. D. Programme in Chemical Engineering

Induction of Students

It is proposed to introduce a Ph.D. programme with an initial intake of about 20 students per year, drawn from Chemical Engineering, Metallurgical and Mechanical Engineering disciplines at the Bachelors and Masters Levels, and also from Chemistry, Physics and Mathematics streams with Masters degree. The Masters Degree holders in Engineering will have to spend a minimum duration of 3 years, the Bachelors degree holder in Engineering 4 years and M.Sc. degree holder in science stream 5 years for earning the Ph.D. degree. The students will be selected on the basis of all India written test and interview conducted jointly by ICT and DAE.

Course Work, In-Plant Training and Research

a) Course Work

The proposed curriculum will have a fine balance of basic and engineering sciences. The curriculum will contain adequate fundamental and core courses to equip the students adequately to make them practising chemical engineers, as enumerated below. At the same time, they will have a background for starting independent research career.

Areas of teaching and research

- | | |
|--------------------------|-------------------------------------|
| (a) Chemical Engineering | (c) Bio-technology |
| (b) Process Technology | (d) Materials Science andTechnology |

Typical List of courses to be taken by the Post Graduates in Science

- (a) Material and Energy Balance Computations
- (b) Industrial and Engineering Chemistry
- (c) Generation and Transmission of Power
- (d) Electrical Engineering and Electronics
- (e) Applied Mechanics and Strength of Materials.
- (f) Momentum Transfer
- (g) Heat Transfer
- (h) Mass transfer
- (i) Unit Operations
- (j) Chemical Reaction Engineering
- (k) Engineering Graphics
- (l) Project Engineering Management and Economics
- (m) Biochemical Engineering
- (n) Advanced Separation Processes
- (o) Process simulations
- (p) Materials Processing and fabrication technology
- (q) Nuclear Reactor Theory
- (r) Nuclear Chemical Engineering
- (s) Statistical Methods of Analysis
- (t) Instrumental methods of analysis
- (u) Nuclear chemistry
- (v) Radiation chemistry
- (w) Chemical Engineering Thermodynamics
- (x) Process Hazard Analysis and Safety

Typical List of courses to be taken by the Engineering Graduates/ Post Graduates

- (a) Quantum Mechanics
- (b) Structure - Property Relationships
- (c) Materials Physics and Chemistry
- (d) Advanced Chemical Engineering Thermodynamics
- (e) Nuclear Reactor Theory
- (f) Nuclear Chemical Engineering
- (g) Process simulation and optimization
- (h) Transport phenomena
- (i) Advanced Reactor Engineering
- (j) Advanced Mass Transfer

- (k) Statistical methods of analysis
- (m) Nuclear chemistry
- (n) Radiation chemistry
- (o) Process Hazard Analysis and Safety

In-Plant Training

All the students before starting Ph.D. research will undergo in plant training for a period of one to three months in the process industry. Some students will undergo training in DAE.

Research Projects

The Ph.D. scholars will take up research projects primarily defined by BARC and IGCAR. However, there will be a certain degree of flexibility for selecting research projects outside the areas of relevance to DAE. To take advantage of the excellent laboratory and library facilities at the DAE institutions, the faculty and students will be provided access to conduct experiments and use of the library and computational facilities at the DAE institutions.

COLLABORATION WITH HOMI BHABHA NATIONAL INSTITUTE

Preamble

There was a dire need to recognize the common interests of ICT and HBNI constituent institutions (CIs) in pursuit of knowledge through doctoral and master's programmes. There is a possibility of the candidates admitted in some of the CIs of HBNI may study at the ICT and carry out the projects under the joint supervision of the faculty members from the ICT and the scientists and faculty members from the CIs of HBNI. It will be mutually beneficial to have lectures by the ICT faculty members at the HBNI, and by the HBNI faculty members and scientists at the CIs of HBNI at the ICT. For the purpose of academic programmes, the following units of DAE are the Constituent Institutions (CIs) of the HBNI are included:

1. Bhabha Atomic Research Centre (BARC), Mumbai
2. Indira Gandhi Centre for Atomic Research (IGCAR), Kalpakkam
3. Raja Ramanna Centre for Advanced Technology (RRCAT), Indore
4. Variable Energy Cyclotron Centre (VECC), Kolkata
5. Saha Institute of Nuclear Physics (SINP), Kolkata
6. Institute of Plasma Research (IPR), Gandhinagar
7. Institute of Physics (IOP), Bhubaneswar
8. Harish-Chandra Research Institute (HRI), Allahabad
9. Tata Memorial Centre (TMC), Mumbai
10. Institute of Mathematical Sciences (IMSc), Chennai

The two Institutes shall recognize each other's research guides in the disciplines of common interests. The identified faculty members of each Institute may function as Honorary Professors of the other Institute and may participate in the teaching programmes of the other Institute in honorary capacity, as per the Rules of the respective institute. The Honorary professors will enjoy the library facilities of each other's institutes like regular faculty. However, a separate request must be made to avail of book-borrowing facilities. In order to share expertise, some seats may be given on priority basis to the faculty and students of the other Institute in the academic/research programmes of one Institute, which are mainly for the in-house persons and where limited access is available for persons coming from outside, such as training programmes, seminars, workshops, etc. The research facilities at one Institute should be made available to the students/scientists/faculty of the other Institute through the involvement of research supervisors or the technology advisors, as per the norms of the respective institute, as follows:

1. A student registered for a post-graduate course in one Institute shall be governed by the Rules of that Institute and will earn the credits of the course as per the prescribed norms. However, a student from one Institute will be permitted to enroll for equivalent courses in the other Institute and earn the credits by attending the courses and clearing the respective evaluation procedures, provided such courses are duly approved by the parent Institute. Thus, the two Institutes shall recognize the credits earned by the students in the institute other than the one where they are enrolled.
2. To facilitate the process of a student attending the course work in the partner Institute, the supervisor of the student in the Parent Institute shall put up a proposal (in consultation with the appropriate academic bodies of the Institute concerned) to the Dean (HBNI)/ Dean(CT), as the case may be.
3. A research guide in one Institute may select a faculty member from a partner institute as a co-guide for guiding a Master's or doctoral student working under his/her guidance; provided such a declaration is recorded at the time of registering the student, with consents from the Heads of both the Institutes. However, collaboration among faculty of each institute, without any such formal arrangement will be within the frame-work on the MOU. This may be required for joint publications.
4. A student with a co-guide should be permitted to work in the specified laboratories of the organization to which the co-guide belongs and avail the facilities there from, and the organization should have no objection to the inclusion of the outcome of the research under this programme in the thesis of the student.
5. Any liability arising out of the work done by a student in the co-guide's organization shall be the responsibility of the co-guide and the parent Institute of the student shall not be responsible for the same.
6. Any patent emerging out of the research work under such a programme shall be with the authorship of candidate, guide, co-guide, and the parent Institute and shall be filed as per the respective ordinances, regulations and rules of the Institute.
7. In case the co-guide leaves his organization, or retires the guide may accept a co-guide from the same organization, provided the new co-guide is recognized. In case such a co-guide is not available, the entire responsibility of successful completion of the programme shall lie with the guide. If the retired person remains with the institute or with other institute of HBNI, as an emeritus scientist, he/she will be permitted to continue as co-guide till the period of his/her new assignment.
8. In addition to the recognized research supervisor, a student may be advised by a Technology Advisor, who need not be recognized Ph.D. Guide, from the other Institute. The Technology Advisor shall be a person of high repute in the area of research being pursued by the student. The Technology Advisor shall be chosen by a research guide, with consent of the Director, ICT and Director of the respective constituent Institution of the HBNI.

DEPARTMENT OF ATOMIC ENERGY (DAE) -DGFS PROGRAMME FOR M.Tech DEGREE

Institute of Chemical Technology (ICT) is one of the Institutes recognized by the Department of Atomic Energy for its DGFS programme. It is a Two-Year DAE Graduate Fellowship scheme for Engineering Graduates and Post-Graduates in Physics for joining M. Tech. in specified specializations

Qualifying Degrees and Disciplines:

B.E/ B. Tech. in Mechanical, Chemical, Metallurgical, Civil, Electrical, Electronics, Computers, Instrumentation and Engineering Physics.

OR

M. Sc. in Physics, Chemistry, Biosciences, Geology, and Geophysics.

A minimum of 60% (aggregate) of a CGPA of 7.01 in the qualifying degree is an essential requirement. Science candidates are further required to have secured a minimum of 60% (aggregate) in B.Sc. also. Screening and Selection of candidates is through a written test or on the basis of valid GATE score. Applications for the programme are to be submitted to DAE as per advertisement in National newspaper and Employment News. (for details visit website: <http://oces.hbni.ac.in>)

Qualification Criteria for Admission and Registration for Ph.D. (Tech.) in Chemical Engineering and the Course Requirements

Category	Basic Qualification for Admission	Course requirement
1	B. E. in Chemical Engineering /B. Tech. in Chemical Engineering / B. Chem., Eng. / B. Tech. in Chemical Technology (ICT) in first class or equivalent	Course work for M. Chem. Engg. (credit courses) (to be completed in 2 semesters from the date of admission) and courses related to nuclear Engineering (to be completed in 3 semesters from the date of admission) Nuclear and Reactor Physics Nuclear Chemical Engineering Chemistry of Radionuclides Material Science in Nuclear Engineering
2	Bachelors degree in Chemical Engineering or Chemical Technology in first class or equivalent + Course work in BARC training school	5 courses including one seminar in Chemical Engineering to be decided by the supervisor and approved by the coordinator followed by PGPC. (to be completed in 2 semesters from the date of admission)
3	Bachelors degree in Mechanical / Mettalurgical Engineering (except Chemical Engineering / Technology) I first class or equivalent + Course work in BARC training school	10 courses and one Seminar in Chemical Engineering to be decided by the supervisor and approved by the coordinator followed by PGPC. (to be completed in 4 semesters from the date of admission)
4	Masters degree in Chemical Engineering / Masters degree in Chemical Technology (ICT) in first class or equivalent	courses related to nuclear Engineering (to be completed in 2 semesters from the date of admission) Nuclear and Reactor Physics Nuclear Chemical Engineering Chemistry of Radionuclides Material Science in Nuclear Engineering
5	M. Tech. Degree in Chemical Engineering from HBNI + Course Work in BARC training school	Minimum number as required by UGC guidelines.
6	M. Tech. Degree in any branch of Engineering (except Chemical Engineering / Chemical Technology) from HBNI + Course Work in BARC training school	4 - 5 courses and one seminar in Chemical Engineering to be decided by the supervisor and approved by the coordinator followed by PGPC. (to be completed in 2 semesters from the date of admission)
7	M. Sc. Degree in Physics / Chemistry /Mathematics in first class or equivalent + Course work in BARC training school	8 - 10 courses and one seminar in Chemical Engineering to be decided by the supervisor and approved by the coordinator followed by PGPC.(to be completed in 4 semesters from the date of admission)

8	M.Sc. Degree in Physics / Chemistry / Mathematics in first class	14 Credit courses and one seminar in Chemical Eng. courses (to be completed in 4 semesters from the date of admission) courses are listed below in category 3.3
9	M. Sc. Degree in Physics / Chemistry /Mathematics in first class (Rank in top 3 in University)	(i) Typically 20 courses comprising of: (to be completed in 4 years from the date of admission) B. UGC NETWORKING RESOURCE CENTRE IN CHEMICAL ENGINEERING

Preamble

The spectacular and consistent performance of the Department of Chemical Engineering, having been rated as number one for past several decades, including 2009-10, which has been revealed by the international surveys, has earned it much recognition, accolades and awards. Apart from the Centre of Advanced Studies, the UGC has recognized it further by awarding the first ever Networking Resource Centre in Chemical Engineering, in October 2008, to undertake following activities:

1. Research, training and skills development of the faculty and research scholars through periodic discussion, workshop and summer/winter schools
2. Capacity building by adopting faculty and Departments for augmenting their research skills and to mentor them
3. Hosting and facilitating researcher from other institutes/universities to carry out key experiments
4. Augmentation of information resource facility of the Department to provide quality research information to other institutes/researchers
5. To enhance and build state of the art in-house research infrastructure and other research facilities in the Department.

The rapidly changing face of research in chemical engineering offers new opportunities for integrating new research areas within its fold and several workshops, courses, demonstration experiments, regular experiments and seminars have been organized by the Centre. The objective of many of these activities is to acquaint the Chemical Engineering community especially from academic institutions with the emerging face of our discipline, and the how to meet the new challenges that it poses to contribute at the leading edge. The idea is also to train the academic fraternity so that overall research and development in chemical engineering is promoted. The interactive workshops also aim at initiating a dialogue on how the new face of Chemical Engineering can be used to address problems, specific to us as a growing nation. The vacation periods, long weekends and week-long programmes are undertaken which are publicized on the homepage of the institute and also communicated to all chemical engineering Departments. Not only the ICT faculty but experts from other institutes, industries, and visiting professors from foreign universities have delivered lectures and interacted with young faculty.

Rules and Guidelines for Registration of Teachers from UGC and/ Or AICTE Approved Colleges for Ph. D.

Under this programme the Centre is required to generate human resource and keep on organizing seminars, workshops, and laboratory sessions for the benefit of teachers and students. One of the primary requirements is to create qualified doctoral degree holding teachers who in turn will generate quality students. Following are the salient points of this programme proposed by the Centre.

1. Teachers who have been in the services of any Engineering and Technology Colleges approved by the UGC/AICTE are entitled for registration for Ph D with Chemical Engineering faculty of the ICT.
2. A minimum service of two years and permanent placement in the concerned college will be the basic criterion.
3. The teacher must have a consistently good academic record with minimum first class in bachelors and/or masters degree from a reputed university.
4. The college management should undertake the responsibility of releasing the person for experimental work or discussions with the concerned research guide from time to time. A proper time table should be prepared by the concerned teacher and his supervisor, which will be approved by the Co-ordinator of the Centre. A bond in this regard should be signed and approved by the Director, ICT.
5. Teachers can work in the ICT labs during vacations and holidays and after their office hours if they come from colleges in the city or nearby. They must indicate on which date they will avail of the research facilities in ICT. A proper log book must be maintained by the candidate duly signed by his supervisor which will be authenticated by the Co-ordinator of the Centre.
6. A maximum period of 5 years extendable by 1 year will be allowed in case of teachers who are part time but put in at least 3 months full time work in a year in the labs. In such cases, part of the experimental work could be allowed to be done in their premises for which their management will provide them with necessary facilities. The characterization and other sophisticated analysis must be done in ICT. Exclusive theoretical work should be discouraged as much as possible to give the teacher a hands-on experience and bringing them into an environment of research. However, this will be left to the individual supervisor's discretion, who should take abundant precaution to avoid unethical practices.
7. The registered candidates will be required to publish or patent some part of their work within two years of the registration otherwise this registration will not be continued. The publication must be done in international journals with decent impact factors. Multi-authored papers without much input from the teacher should be avoided. Conference proceedings which are not peer reviewed will not be considered as publications.

8. The registered teachers as Ph D students should not register any Masters students with themselves in his/her own college to avoid research by proxy. The candidate as well as his/her supervisor must give an undertaking, with a counter signature of the concerned principal to this effect to avoid degeneration of this novel concept into a Ph D by unscrupulous means.
9. If the teacher intends to join the ICT on leave without pay for a period of three years, then the candidate could be eligible for the UGC fellowship under our SAP programme.
10. Teachers with Masters Degree will be allowed to undertake benefit of this scheme. Those who have got Bachelor's Degree ought to take leave from their colleges in order that they complete the theory part of the Masters Programme for direct Ph.D.
11. All regular admissions criteria are applicable to these candidates and they must also do the course work required for Ph.D. programme.

CENTRE OF EXCELLENCE FOR PROCESS INTENSIFICATION (CoE-PI)

The Centre for Process Intensification for Process Industries (CoE-PI) under TEQIP in the Institute of Chemical Technology (ICT), Mumbai, aims to be a world leader in the field of conceptual process design, Process Integration and Process engineering. The methodologies will allow environmentally friendly process design with the most efficient use of raw materials and energy with affordable cost. The Centre shall be dedicated to the development of design methodologies in the field of process intensification and process integration. The Centre aims to change process design practice, by developing and disseminating new process design and integration methods for clean and efficient use of raw materials and energy at lower cost. The process intensification and integration will be based on interactions between elements of the chemical and physical processes that take into account during the process design the material and energy flows. The resulting integrated processes exploit synergies between the system components, leading to processes with superior performances, in terms of their raw materials consumption, energy demand, process economics, environmental impact and sustainability. The centre has identified 13 research projects which have great relevance with present industrial practice.

DEPARTMENT OF CHEMISTRY

VISION:

To be a nationally recognized chemistry resource centre, making noteworthy academic contribution and undertaking contemporary and relevant research.

MISSION:

- To induct and retain competent and committed personnel
- To produce quality publication and proficient man power
- To collaborate with Industry and academic centres of excellence
- To undertake sponsored projects of national and social relevance
- To participate in state and national level educational programmes
- To conduct relevant and contemporary M.Sc. and Ph.D. programmes

PROFILE:

Department of Chemistry was established in 1951 to cater the responsibility of teaching basic chemistry. The department shoulders the responsibility of conducting chemistry courses, theory as well as practical for undergraduate programmes of all the three branches, viz., B.Chem.engg., B. Tech. and B. Pharm. The Department also offers admission to Ph.D. (Science) Chemistry, Ph.D. (Science) Biotechnology, Ph.D.(Tech.) chemical engineering programme and the intake

of students varies based on the vacancies with the faculty members. Department has started M.Sc. (Chemistry) two years course by papers with an intake capacity of 20 from Academic Year 2010-2011. The programme is accredited by the Royal Society of Chemistry, UK in 2014.

The Department is active in teaching, research and industrial collaborative work. Considering the contributions the department has been recognised by the university Grant Commission, under special Assistance Programme (SAP), Departmental Research Support (DRS-II) and DST-FIST Programme . Through this programme the Department has 10 Ph.D. fellowships to offer. The faculty members are actively engaged in research areas of current relevance. The research work carried out in the department is funded by the research projects sponsored by funding agencies like UGC, CSIR, DAE, IGCAR and DST Some of the faculty members are carrying out research in collaboration with reputed organisation from both India and abroad. In the last five years the department has published more than 200 research publications in international journals of repute with an average impact factor of more than two. The work is also recognised well in term of large number of citations(more than 5000) The faculty member is actively involved in several extra-mural academic activities, like the Indian National Chemistry Olympiad, National Initiative for Undergraduate Sciences (NIUS).Currently the department has 45 Ph.D. and 37 M.Sc. Students. The Students who have obtained doctoral degrees from the Department get attractive placements in industries and research institution. The research students of the department assist the faculty in conducting undergraduate courses. This helps them in their personal development.

The Department is equipped with sophisticated instruments such as FTIR, UV-VIS, Spectrophotometer, GC-MS, gas chromatographs, HPLC, Zetameter, Viscometer, Microwave synthesizer, Digital polarimeter, computer workstation ,Electrochemical Workstation, Vapour pressure reactor ,supercritical carbon dioxide reactor, surface area analyser, high pressure reactors, Tensiometer, X-Ray diffraction unit The Department has several endowments through which, experts from various leading research institutes working in frontier areas in Science and Technology are invited for lectures and interaction.

DEPARTMENT OF GENERAL ENGINEERING

VISION :

To contribute to India through excellence in technical education and research,to serve as a valuable resource for industry and society.

MISSION :

To impart basic knowledge of General Engineering subjects to students to enable them for better understanding of practical applications to various industrial problems.

To undertake collaborative projects which offer opportunities for long term interaction with academia and industry.

To provide an excellent educational experience for its students .This experience includes an emphasis on the technical communication, teamwork and life-long learning skills in which graduate engineers held to excel at the workplace and in society.

General Engineering Department of the Institute was established in the year 1954 and is involved in teaching undergraduate as well as postgraduate students of the institute. The Department is running a full time master's program M. E. in Plastics Engineering from 1972, the course is accredited by National Board of Accreditation. Students having basic qualification in Mechanical, Production, Plastic/ polymer, Electrical and chemical engineering and technology are eligible for admission to this course. The course deals with Processing of plastics, composites, Design of Molds, Design of processing tools/ machinery, CAD, CAM and CAE and testing, Polymer applications in various fields of engineering, Development of new materials for industrial as well as domestic applications. Apart from laboratories such as workshop, electrical and electronics, applied mechanics and strength of materials, the Department has provision for special facilities of processing of plastic and polymer composites, testing of plastics, and computer aided design

and drawing laboratories. These laboratories cater to the needs of the under graduate and post graduate students of the Department and institute. The Department has plastic processing equipment such as micro-processor controlled injection molding machine with molds of standard mechanical test pieces, blow molding machine, rotational molding machine, and single screw extruders well as twin screw extruder. Department is having licensed CAD and CAE software such as Mold flow, Pro-engineer and Solid Works with high end computer facilities. The department is having a facility of Plastic Testing such as impact tester, MFI tester, hardness tester etc. GATE qualified candidates of M.E.in Plastics Engineering receive AICTE fellowships. Candidates can register for Ph. D. in Plastics/ Mechanical/ Production/ Electrical/ Civil/ Engineering either full time or as the external candidates (Only for teachers/ employees from Government organizations). In recent years the enrollment for Ph D in the department is increasing. Presently number of PhD students enrolled in the department in various branches are: 29 in Mechanical Engineering, 06 in Civil Engineering, 03 in Plastic Engineering, 11 in Electrical Engineering and 04 in Electronics Engineering etc. Also 02 students had received National Doctoral Fellowship. Department is also having industry sponsored Ph D student from BASF and Master's student from TVS motors. Recently the department faculty has been awarded one **national patent on Water Resistant Phosphogypsum Composition**. Department is also involved in execution of Research project funded by DST and Rajiv Gandhi Science and Technology Commission of Govt of Maharashtra.

Department is having specialized teaching faculty from mechanical, plastics, production, civil, electrical and electronics branches. Most of the faculty are guides for the masters and doctoral programs of the institute. Besides teaching and research, departmental faculty members are holding associate dean position and member of various inhouse committees to help the management of the institute. Students can take up research in multidisciplinary areas.

Department is also responsible for Civil and Electrical maintenance of infrastructure such as institute buildings, laboratories, faculty quarters and hostels. Department is actively involved in the development of the new buildings and infrastructural facilities in the campus. Department looks after Liasoning with BEST and Municipal Corporation for all the requirements of the institute upto some extent.

DEPARTMENT OF MATHEMATICS

VISION:

The Department of Mathematics, Institute of Chemical Technology, Mumbai, aims to be an internationally leading mathematics department that will offer innovative educational and research programmes in mathematical sciences and their applications in science and technology

MISSION:

In pursuit of its vision, the department wish to (i) offer courses and programs that will ensure that the student get practical knowledge in mathematics which will be relevant to the society (ii) provide a modern educational environment for instruction and research (iii) create an environment for learner to engage in solving real-world problems (iv) contribute to the understanding of complex mathematical structures and their applications.

RESEARCH AREAS:

The Department of Mathematics has research expertise mainly in the areas of Computational Fluid Dynamics and Mathematical Modeling, Momentum, Heat and Mass Transfer in Newtonian Non-Newtonian Fluids, Singular Perturbation Theory, Optimization Techniques, Statistical Analysis, Data Analysis, Mathematical Biology, Species Distribution Modeling, Applied Functional Analysis, Differential Equations, and Mathematical Pedagogy.

ABOUT THE DEPARTMENT:

The Department of Mathematics, ICT Mumbai was established in the year 1944. Since its inception it caters to all the courses related to mathematics, statistics and computer programming

of UG and PG programmes in ICT. The department offers a 2 year M.Sc. programme in "Engineering Mathematics". This programme was started in the academic year 2012-2013 under the UGC INNOVATIVE SCHEMES and is very unique in its nature. The department also has Ph.D. programme in Mathematics covering diverse area of research. The community of the department consists of six faculty members, with broad areas of expertise related to mathematics and statistics, and two support staffs. The department has modern and high level computational facilities, consisting of 50 All-In-One Computers, Two Servers, one workstation and a High Performance Computing (HPC) cluster. All computers are installed with software such as MATLAB, Mathematica, SPSS, R Python and Sagemath etc. The department has strong research collaborations with other renowned academic institutions and industries. Students are also provided with industrial internship and placements opportunity. The faculty members of the department are member of Board of Studies of several institutes. The department regularly arranges workshops, conferences and seminars for students and teachers of other colleges. Faculties are also engaged in various training programmes in mathematics and statistics across the country.

DEPARTMENT OF PHYSICS

VISION :

To evolve ourselves to understand and know the basics of science and to utilise it to develop newer technologies for the benefit of society and aptly be a part of this Esteemed Institution and to strive to infuse momentum to the Department so that this Department becomes one of the best learning centres of basic sciences and strive to make significant contributions to academia as well as to industry.

MISSION :

Innovatively follow newer ways of teaching and upgrade curricula to infuse enthusiasm of knowing in students.

Work in diverse fields and multidisciplinary themes so that learning and knowledge is gained by faculty to move further to fulfil the vision.

Strive to get funds to upgrade and maintain present research facilities.

To create POLYMER and NANO SCIENCE CENTRES.

Department of Physics at the ICT has the distinction of being one of the earliest Departments in the Institute. It was started as Optics Section in 1935 which was subsequently changed as Physics Section in the Second Five Year Plan and then to Department of Physics under MUICT. Department of Physics undertakes undergraduate and post graduate teaching in Physics. The Department participates in 1st year B. Tech. and B. Chem. UG teaching - theory and practical's. The Department offers electives at 2nd year B. Tech. and B.Chem. The faculty of the Department undertakes a full course of Physical Methods of Analysis for all branches of M. Tech. students in both the semesters which also serves as a credit course for majority of Ph.D. students. The Department has started M.Sc (Physics) (Material Science) course from year 2014 with emphasis on the Material Science with maximum strength as 20.

The Department is one of the participating Departments of Centre of Advanced Studies in Physio-Chemical Aspects in Textiles, Fibres, Dyes. The Department has made significant contributions in the field of Material Science (Study of Polymer/Polymer composites and nano-composites and their various properties), Solar Thermal Applications, Nano-aided Drug Delivery. The research in Colour assessment of dyed textiles and colour perception is also carried out in this Department. Currently 20 doctoral students are working on various topics. Faculty members have actively participated and attended national and international seminars / workshops and presented their papers. A good number of papers are published in peer reviewed journals. Faculty members have research projects from industry and various government funding agencies. Two patents on solar thermal system are also filed recently.

THRUST AREAS OF RESEARCH:

The faculty of the department undertakes research in many aspects of materials sciences:

- Polymer Morphology/Orientation, Polymer composites / nanocomposites.
- Nano-drug delivery.
- Polymer dispersed Liquid crystals, Plasma processing of Materials.
- Statistical Mechanics applied to Chemical Engineering Thermodynamics.
- Synthesis and functionalization of CNTs, Energy storage, Super-capacitors.
- Magnetism, transport properties of quantum magnets and Low-temperature Physics.
- Computational Physics, Phase Transitions in Polymers and Gels.
- Solar Thermal applications, Solar Energy Harvesting.

NAME OF THE PROGRAMMES OFFERED:**M.Sc. Physics (Material Science)**

Ph. D. in Physics (thrust area being Polymer/Polymer Composites and nanocomposites, Solar thermal, Coloured assessment of dyed fabric and study of geometric attributes of Colour, Nanoparticle synthesis, Theoretical aspects of Chemical Engineering, Probing Magnetic properties of materials, Carbon nanotubes, Graphene, Fuel cell electrocatalyst, Energy storage and Electrochemical sensors)

Admission Criteria for the programmes offered

For M.Sc. Physics: Eligibility: B.Sc. in Physics with minimum 55% or Selection based on Entrance exam. For Ph.D. Physics: Eligibility: M.Sc. in Physics with minimum 55% or Selection based on Entrance exam.

Courses handled:

First and Second Year B. Chem. Engg. and B. Tech. – Applied Physics I and II, Statistical Mechanics and Colour Physics

Courses for M. Tech. and M.Sc. (Textile Chemistry)

DEPARTMENT OF DYESTUFF TECHNOLOGY

VISION :

To build world class programmes of excellence in education and research in the specialized area of Dyestuff Chemistry and Technology for the benefit of society through problem solving competencies

MISSION :

The department aspires to be one of the world's top color chemistry departments by 2020. It will do so by-

Providing knowledge and skilled based training at undergraduate and postgraduate level by designing, teaching, and periodically upgrading a color chemistry and technology syllabus in line with current anticipated trends in industry and academia

Pursuing world class research in colorants and related areas-basic textile and leather coloration, functional colorants, organic process technology and specialty chemicals

Proactively developing and maintaining close interaction with national and international research laboratories, universities and chemical industries

ABOUT

Dyestuff technology department started functioning in 1944 under the stewardship of Prof. K. Venkataraman, the then director of Institute of Chemical Technology (ICT, formerly known as

UDCT), University of Mumbai and is an outstanding department, an epitome of skill, talent, hard-work and success. Highly experienced scientists and scholars such as Prof. B.D. Tilak, Prof. S. V. Sunthankar, Prof. S. Seshadri, and Prof. D.W. Rangnekar have enriched this department and led to its progress. More than 1000 undergraduate students and over 450 postgraduate students have passed out from this technology department.

RESEARCH FOCUS

Late Prof. K. Venkataraman's pioneering work on synthetic dyestuff chemistry, natural colorants, structural elucidation, spectral studies and his books on "The Chemistry of Synthetic Dyes" are still popular and treated as Bible for Dyestuff Chemists and Technologists around the world and was translated in more than 14 languages.

The outstanding research work carried out in the department has created permanent global impact on dyestuffs and allied industries especially the Indian Dyestuff Industry. Publications of popular informative volumes, over 1000 publications of national and International repute, have led the progress of the department.

Presently the department is more focused on functional colorants, colorants for non textile applications and high performance pigments. These include the synthesis of laser colorants, colorants for optical information storage devices, colorants for ink-jet printing, colorants for biology, colorants for solar energy conversion and synthesis of various high performance pigments. The department is getting ready to meet the ever changing and demanding global challenges in the field of colorants and allied fields.

HIGHLIGHTS OF COURSE

The dyestuff technology department is a unique centre of learning. It offers a very advanced curriculum which produces new generation of talented color technologists as well as bright researchers. The curriculum as well as on going research synchronizes with the latest industrial and academic developments. This has led to a high quality of industry-academia relations for better technology and products.

B.Tech. course in Dyestuff and Intermediates emphasizes Chemistry, Technology and Engineering of organic intermediates and colorants. We equip our student with knowledge of manufacturing processes, analytical techniques and laboratory synthesis with scaling up skills.

M.Tech. course in Dyestuff Technology mainly focusses on the latest process technology and business management. The main aim of this course is to provide better knowledge for the student and prepare him for entrepreneurship. Thos also have 4-6 months industry internship and an extensive project work.

Our curriculum envisages developing entrepreneur skill as well as research attitude. During the curriculum students are exposed to the general engineering skills like, tool design, electrical appliances, machine drawing, etc. In addition, a detailed study of basic sciences (Physics, Mathematics, and chemistry) and chemical engineering aspects are covered. Humanity related subjects like Industrial economics, Chemical Process Economics and Industrial management are also covered during the four-year course of B.Tech. Students also have the opportunity to develop the soft skills like effective communication and software programming languages.

We have a very good track record of 100 % placement for both B.Tech. and M.Tech. course. Our department have produced about 100 first generation entrepreneurs.

PERFUMERY AND FLAVOUR TECHNOLOGY

VISION :

Empowering the knowledge of perfumery, flavors and cosmetics through learning a cutting-edge **technology for the benefit of mankind**.

MISSION :

To educate students and professional in the area of perfumery and flavor, cosmetic technology.

To serve and upgrade the aroma industry in the form of chemical technology so as to make them competitive in local and global market.

Actively nurturing with close co-operation at National and International levels, with reputed institutions, industries, research and development organizations and universities.

We are using flavor and fragrances since last five millennia. The first individual chemist known to history was from the second millennium BCE in Mesopotamia. As an area of modern chemical industry, it is low profile compared with the pharmaceutical and petrochemicals. Yet it is a multi-billion dollar, global industry that impacts on everyone's life in the developed world.

Synthetic chemistry is developing new methodologies, so that materials which are important and available at high cost can be made available at an affordable price. Analytical work on examination of new exotic materials may also lead to the identification of exciting new compounds.

Currently the organizations like Givaudan, IFF, Firmenich, Symrise and Quest International have turnovers greater than \$ 16 billion. The geographical distribution of sale of flavour and fragrance materials is surprising with North America 30.6 %, Asia Pacific 27 % and Western Europe 23.2%. The key factor is the development of global economy. The market for flavour and fragrance is a mirror of the affluence of a society. With this we can hope that billions can share the living standards of the developed world which in turn shall open the market for the flavour and fragrance industry.

Perfumery and Flavor Technology is a unique course in Institute of Chemical Technology. It started in the year 1990-91. Major funding agencies for this course are FAFAI and ICEOFF and Dr. R.Y. Mantri Endowment. We are offering two fellowships of Rs. 10,000 per month for the Masters course in Perfumery and Flavours.

DEPARTMENT OF FIBRES AND TEXTILE PROCESSING TECHNOLOGY

VISION :

- To be the world class centre of excellence in teaching and research in chemical processing of fibres, textiles, apparels and the key areas of technical textiles with ecological, social and ethical responsibility, meeting the crucial needs of trained man power and technological solutions of Indian textile industry.

MISSION :

- To be the leader in offering top class human resources by training them from bachelors to doctorate level degrees in core competence i.e. in chemical processing of fibres, textiles and apparels.
- To train the industrial technicians as per the demands of the industry, upgrading their skill to meet international quality standards.
- To conduct industrially relevant research and provide technical guidance aimed at offering technology solutions and enhancing competitive edge to the industry.

Almost 5 years ago, in 1933, when the Indian Textile Industry was progressing in full swing in cities like Mumbai, and Ahmedabad, other industries were not even born. It was the time Sir VitthalChandavarkar was the Vice Chancellor of University of Mumbai and also the Chairman of Textile Mill Owners' Association.

Thus, the Department of Fibres and Textile Processing Technology (FTPT), formerly known as Textile Chemistry Section, has the unique distinction of being the first discipline with which this institution started. The Department conducts B.Tech. course with an intake capacity of 34, which is highest among all the B.Tech. courses of ICT. The course involves study of chemistry and manufacture of fibres, their chemical processing such as bleaching, dyeing, printing and finishing. It further encompasses the study of chemistry as well as application of various kinds of chemicals, dyes, thickeners, and finishing auxiliaries which are used in chemical processing of textile fabrics and garments. It also involves knowledge of green chemistry, biotechnology and nanotechnology with special reference to chemical processing of textiles.

The post graduate courses of M. Tech. in Fibres and Textile Processing Technology both, Regular- 2 years and Sponsored 3- Years, M.Sc. in Textile Chemistry, Ph.D. (Tech.) in Fibres and Textile Processing Technology, Ph.D. (Sci.) in Textile Chemistry and Ph.D. (Sci.) in Chemistry attract a large number of students and so far more than 2500 graduates and 500 post graduates have passed out from this Department. The faculty of the Department has good interaction with the industry. Several industries and institutions have signed MOUs for research collaboration with us. Under these MOUs we offer Ph.D. and M. Tech. courses to their scientists. A number of industries have been benefited by the technical advice given by the faculty. There have been a number of industrial and governmental research projects in which problems of mutual interest are investigated and the students as well as the Department have been benefitting by this interaction. The Department is recognized as Centre of Advanced studies in "Physicochemical aspects of Textile, Fibres, Polymers and Dyes" presently in Phase VII, since 1962. It was also recognised under the MODROB scheme of UGC. The Department is has been funded by TEQIP. In the month of December 2012, the Department got recognised as DST-FIST funded Department for the second time. The department also played an important role in evaluating TUFS under Ministry of Textiles, GOI. Also, the Department organizes guest lectures by industry experts under different endowment programmes. An international conference 'Texsummit' was organized by the Department recently, in December 2012. The faculty is engaged in high quality fundamental as well as applied research and they have got over 1000 publications in Indian and International journals as well as reputed fellowships to the credit from recognized institutions in India and abroad.

After the globalization of the markets with border-less trade, textile manufacturing activities are shifted to country like India which is fast developing economy. Textile being one of the fundamental needs of human being, it is a mother industry, next to only agriculture sector, involving over 60 million people. Today, the business is fast growing and will soon touch around US\$ 100 Billion. However, in the border-less trade many multinational brands are competing and the critical area of chemical processing of textile fabrics and garments requires tremendous amount of consolidation in terms of well trained manpower which can keep pace with latest technological operations and demand of stringent quality parameters in shortest delivery time giving competitive edge to the manufacturers. There is a huge shortage of Textile Processing graduates in the core textile industry as well as in multinational and reputed Indian manufacturers of dyes, chemical and auxiliaries. Thus the scope for graduates and postgraduates of this Department is enormous and such a demand with every passing day will only be rising given that consumption of apparels and technical textiles in India and abroad is increasing at galloping rate. The Department has a twinning programme with Ethiopia for past 4 years and is involved in helping Ethiopean extile Industires Development Institute (ETIDI).

DEPARTMENT OF FOOD ENGINEERING AND TECHNOLOGY

VISION :

Establishing a center of excellence to provide demand driven, value-based and quality technical education to make India a developed country through socio-economic transformation

MISSION :

Creating an atmosphere to deliver fundamental knowledge in Food Engineering and Technology for the students to fulfill the need of all segments of society and the environment.

Starting from the classroom teaching and simultaneously creating a multi-disciplinary platform capable of conducting research, technology development and solving industrial challenges.

Providing leadership and training personnel for the benefit of the industry and society complying with overall activity towards economic growth of the country.

This Department is the first in our country to offer specialized education in Food Technology.

The B. Tech. (Food Eng. and Tech.) course trains the students in chemical, biochemical and microbial aspects of foods. Students are also taught how high quality products can be prepared and preserved for storage and how the storage conditions might affect the quality. The course gives adequate engineering inputs for large-scale production. The training also includes development of food products, manufacturing processes, design of factory with proper quality assurance system established. Economic feasibility of marketing such products is also taught during the course. The major research interests include carbohydrate chemistry and technology with focus on Indian traditional foods; and food microbiology related to quality, safety and application of new technology. Prof. D.V. Rege Centre has been founded to cater to the needs of Food Technology Research.

The UGC has recognized the Department as Centre of Advanced Studies in Food Engineering and Technology, under which 15 SAP fellowships are awarded per year. A new course assisted by DBT in Food Biotechnology has been in place since 2009-10 with 10 M. Tech. GATE fellowships. The Department also participates in two interdisciplinary M. Tech. courses - Perfumery and Flavour Technology, and Bioprocess Technology.

DEPARTMENT OF OILS, OLEOCHEMICALS AND SURFACTANTS TECHNOLOGY

After WW-II, the Department for Technology of Oils, Fats and Waxes was started, which was headed by Professor J. G. Kane, whose work on non-edible oils was exceptional. The Department has been in forefront for its quality education. Several of its alumni have been industrialists and reputed educationists.

VISION :

Harnessing innovative skills of its faculty and students to achieve a global leadership position in Oils, Oleochemicals and Surfactants Technology, while nurturing a culture of trust and healthy competition in order to serve the critical professional needs of industry and society.

MISSION :

To pursue world class programs of excellence in education and research in specialized areas of Oils, Oleochemicals and Surfactants Technology relevant to the sustainable development of process industries that require problem solving competences in these core areas of knowledge.

What is this Technology?

The lipids are a class of biochemical compounds, many of which occur naturally in plants and animals. The lipids constitute a very large class of compounds, many of which play essential roles in organisms. Among the most important lipids are fats and oils, waxes, steroids, terpenes, fat-soluble vitamins, prostaglandins, phosphoglycerides, sphingolipids, and glycolipids. Phospholipids, for example, occur in all living organisms, where they are a major component of the membranes of most cells. The main use of fats commercially is in the production of soaps and other cleaning products. Oleochemicals are chemicals derived from biological oils or fats. The hydrolysis or alcoholysis of oils or fats form the basis of the oleochemical industry. The formation of basic oleochemical substances like fatty acids, fatty acid methyl esters (FAME), fatty alcohols, fatty amines and glycerols are by various chemical and enzymatic reactions. Intermediate chemical substances produced from these basic oleochemical substances include alcohol ethoxylates, alcohol sulfates, alcohol ether sulfates, quarternary ammonium substances, monoacylglycerols (MAG), diacylglycerols (DAG), structured triacylglycerols (TAG) and sugar esters. The importance of these chemicals is thus evident.

This Department has been pioneering in the field of Oil Technology. The curriculum has been designed to provide an in-depth knowledge of chemistry and technology of oils and fats, and their industrial applications. Career opportunities exist in oils mills and refineries, oleochemicals, soap and detergent manufacturing industries, surfactants and specialty chemical manufacture producing auxiliary chemicals, Paints. Cosmetics, Perfumery and raw materials

used in the above industries. Several short and long term projects instituted by sponsoring bodies for process/product development have been supervised by the faculty as part of their routine research activity.

It also participates in M. Tech. in Perfumery and Flavour Technology, Green Technology and Bio-Process Technology.

DEPARTMENT OF PHARMACEUTICAL SCIENCES AND TECHNOLOGY

VISION :

To be a globally recognized premier educational and research Centre with world class facilities, adopting international best practices, focused on the integration of science and technology in the areas of Drug Discovery, Drug Delivery, Organic Process Research and Herbal Healthcare Products

MISSION :

To achieve the best in pedagogy and research, through creation of a dedicated team of faculty and state of art research facility, to develop skilled manpower and innovative cost effective technology to support national healthcare programmes.

This Department offers two distinct programmes - Pharmaceutical Technology and Pharmacy. The Pharmaceutical Technology course or the B. Tech. programme, earlier B.Sc. (Tech.), deals with the technology of manufacture of drugs and pharmaceuticals. It has all the ingredients for a solid foundation in basic sciences, mathematics, computation and chemical engineering. B. Tech. (Pharmaceuticals and Fine Chemicals) was started in 1943, and today the course is B.Tech. (Pharmaceutical Chemistry and Technology). Basic science subjects like chemistry, mathematics and physics are dealt with in depth, while students are introduced to subjects of biochemistry, microbiology and pharmacology. Strong background knowledge of chemical engineering including chemical reaction engineering, unit operations, separation processes, instrumentation and process control, and stoichiometry is imparted to synergise with the major focus, which is on manufacturing process technology and chemistry of API, intermediates and fine chemicals and dosage form technology. Several distinguished alumni and many first generation renowned industrialists had their training in this Department. The aim of the B.Tech. (Pharma) course is to develop complete professional technologists/entrepreneurs for the active pharmaceutical ingredients (API) and pharmaceutical industry.

The B. Pharm. Course at ICT, started in 1958, was the first course of this kind in the state of Maharashtra. The course involves a detailed study of Pharmaceutics, Pharmaceutical and Medicinal chemistry, Pharmacology, Pharmaceutical Analysis and Pharmacognosy. The goal is to enable an understanding of the science of drugs and drug actions. The course is supported with in depth courses in basic sciences namely, organic chemistry, inorganic chemistry, physical chemistry, biochemistry, microbiology, maths and other relevant subjects like biotechnology, forensic pharmacy, management. The focus is on development of an expertise in the chemistry of drugs, drug effects, dosage regimen, drug toxicity and interactions with adequate knowledge of the synthesis of drugs, principles of drug formulation design and evaluation and regulatory requirements.

The UGC has recognized the Department as Centre of Advanced Studies in Pharmaceutical Science and Technology with supernumerary Single Girl Child Fellowships. Besides, fellowship are also accorded under various other government projects with individual faculty. The Department has also received support under the DST-FIST programme. Many industry sponsored projects, both National and International, are also currently in progress. Modern equipment, instruments and infrastructure are available for research. The faculty is highly active and has filed patents in a variety of areas including NCE's and drug delivery. The Department also participates actively in three interdisciplinary courses of ICT namely M.Tech. in Bioprocess

Technology, M.Tech. in Perfumery and flavour Technology and M.Tech. in Green Technology. M. Tech. in Pharmaceutical Biotechnology has been started since last year with 10 GATE fellowships. The programme is multi-disciplinary.

DEPARTMENT OF POLYMER AND SURFACE ENGINEERING

VISION :

Empowering skills and knowledge about latest Research in the field of Polymer and Surface Coating Technologies.

MISSION :

To Pursue world class Programs on Excellence in Education and Research in the area of Polymer and Coating Technology for the sustainable development of Industries that require trouble shooting competencies in these core areas of knowledge.

The Department of Polymer and Surface Engineering has undergone changes in its nomenclature and was established in 1946. Earlier it was known as Paints, Pigments and Varnishes (PPV) Section and was steered in the beginning by none other than Professor N.R. Kamath, a famous chemical engineer, graduate of first batch of B.Sc. (Tech.), in 1936, who later migrated to IIT-Bombay as Head of Chemical Engineering and Deputy Director. The B.Sc. (Tech.) courses in plastics and paints technologies were started in 1946 and have been popular throughout the world. Several small and medium industries covering plastics, paint, printing ink, adhesive, sealers and allied industries have been founded by the graduates of the Department and maintained excellent connectivity with industry.

The Department runs two B. Tech. programmes: Polymer Engineering and Technology, and Surface Coating Technology.

What is Polymer Science and Engineering

Polymers are macromolecule that contains many monomer units, typically tens of thousands to millions. While many polymers occur naturally as products of biological processes, synthetic polymers are made by chemical processes that combine many monomers, together in chains, branched chains, or more complicated geometries. Starch, cellulose, proteins, and DNA are examples of natural polymers, while polyolefins, nylon, PET, ABS, Teflon, and PEEK etc. are examples of the synthetic variety. Both classes possess a number of highly useful properties that are as much a consequence of the large size of these molecules as of their chemical composition. Although most synthetic polymers are organic, that is, they contain carbon as an essential element along their chains, other important polymers, such as silicones, are based on noncarbon elements.

The rapid pace of advances in polymers, particularly after World War II, has been remarkable and the birth of this discipline in ICT in mid-1940s was timely. Synthetic polymers are so well integrated into the fabric of society that we take little notice of our dependence on them, whether it is health, medicine, clothing, transportation, housing, defense, energy, electronics, employment, space, and trade. Without a doubt, synthetic polymers have large impacts on our lives.

Although progress in polymer science and engineering can be considered ground-breaking, opportunities are abundant for creating new polymeric materials and modifying existing polymers for new applications; depolymerization and polymer recycling; oxo and biodegradable polymers; nano-composites, and the like. Scientific understanding is now replacing empiricism, and polymeric materials can be designed on the molecular scale to meet the ever more demanding needs of advanced technology. The possible control of synthetic processes by biological systems is promising as a means of perfecting structures. New catalysts offer the opportunity to make new materials with useful properties, and the design of new specialty polymers with high-

value-added applications is an area of rapidly increasing emphasis. Theory, based in part on the availability of high-speed computing, offers new understanding and aids in the development of improved techniques for preparing polymers as well as predicting their properties. Analytical methods, including an array of new microscopic techniques particularly suited to polymers, have been developed recently and promise to work hand-in-hand with theoretical advances to provide a rational approach to developing new polymers and polymer products. The field of polymer science and engineering therefore shows no sign of diminished vigor, assuring new applications in medicine, biotechnology, electronics, and communications that will multiply the investment in research many times over in the next few decades.

The education provided to the students is the blend of practice and theory related to polymer science and engineering. The students learn to develop systems which are economically feasible and environmentally acceptable.

What is Surface Coating Technology?

Coating applied on other surface of the materials for the decoration and protection. The surface coating change aesthetic properties such as color, gloss, texture and functional properties like resistance to wear, chemical attack, permeability, weathering resistance without changing the bulk properties. These materials includes coatings, adhesives, sealants, varnishes, enamels, lacquers. Initially coating were solvent based however, the volatile organic compounds are compelling to develop ecofriendly coatings like water based, high solids coatings, powder coatings and radiation curable coatings. In general, organic coatings are based on a vehicle, usually a resin, which, after being spread out in a relatively thin film, changes to a solid. This change, called drying, may be due entirely to evaporation (solvent or water), or it may be caused by a chemical reaction, such as oxidation or polymerization. The materials providing the hiding are the opaque materials called pigments, dispersed in the vehicle, contribute colour, opacity, and increased durability and resistance.

The physical, chemical and mechanical properties of a material surface determine its applicability in many technical devices. Numerous applications could not be realized without the use of surface modifications, coatings and thin film technology. Therefore, the need for efficient and effective methods of surface modification is becoming increasingly evident to allow the production of far superior products in terms of wear resistance, corrosion protection, enhanced biocompatibility, thermal insulation, improved optical and altered electronic properties. Coating technologies of particular interest include physical and chemical vapor deposition, thermal spraying, electrochemical deposition, sol-gel-syntheses, and plating. Surface modification includes directed energy techniques such as ion, electron and laser beams as well as etching procedures and thermo-chemical diffusion. Beyond that, mono-layers (e.g. SAM, Langmuir-Blodgett) have attained high significance in preparing thin films to modify biomedical surfaces. Recent novel techniques to prepare patterned surfaces (e.g. nano-imprint lithography, micro-contact printing) have proven their potential for the fabrication of integrated circuits and bioactive implants. Thus, this course offers an exciting field of study.

New trends related to surface engineering and coating technology for the synthesis of functional materials surfaces including novel fabrication methods, materials and applications, new characterization techniques as well as numerical simulation and modeling are some of the areas of research.

The Department is supported by UGC, DST, BRNS, etc.

DBT-ICT CENTRE FOR ENERGY BIOSCIENCES

VISION:

We aspire to be an internationally leading Centre for education to create industry ready manpower, generating new economic growth by providing solution to national and international agenda, and through world class translational research in the field of biosciences and industrial biotechnology.

MISSION:

To provide outcome based education, and research infrastructure to become global leader in creating industry ready manpower, and sustainable technologies based on biosciences and industrial technology for development, in joint efforts with industries, academia and business at national and international level.

The DBT-ICT Centre for Energy Biosciences (DBT-ICT-CEB) is a unique place that integrates basic and translational science capabilities for bioprocess development and scale up. Funded by the Department of Biotechnology, Ministry of Science and Technology, India, the Centre was established and formally inaugurated in May 2009. Established at a total cumulative cost equivalent to more than USD 15 million, the Centre is a part of the Institute of Chemical Technology (ICT) at Matunga, Mumbai, which is a deemed to be University under Section 3 of UGC Act 1956. The Centre was set up as a result of vision and efforts of Dr. M. K. Bhan, Secretary DBT and Dr. RenuSwarup, Advisor, DBT, and functions under the leadership of Dr. G. D. Yadav, Vice Chancellor, ICT. The projects and technical programs at the Centre are coordinated by Prof. Arvind Lali. The Centre is focused primarily at developing biotechnologies for deriving biofuels and other products from renewable resources for reducing India's rising dependence on petroleum and cut down greenhouse gas emissions. The Centre believes in building multidisciplinary capacity for development of integrated technology packages.

The Centre successfully completed its first phase of five years in 2013 and was awarded an extension of five years by the Department of Biotechnology with the extended mandate of upscaling and upgrading the platform technologies developed during the first phase. The 10 Ton/day biomass pilot plant set up by Industry has successfully validated all segments of the novel DBT-ICT Lignocellulosic Ethanol Technology in a continuous non-stop flow mode from biomass size reduction to ethanol fermentation. The technology is at present being taken to commercial scales by different oil marketing companies. The Centre has developed a highly competent working groups in the area of Synthetic biology, Fermentation technology, Green/Chemical catalysis, Algal technologies, Enzyme engineering and technology, Separation technologies. These groups have developed a range of globally competitive cutting edge technologies that are at present being translated to demonstration and commercial scale plants.

With an outstanding achievement in the first phase, the second phase progressed to develop platform technologies for conversion of all domestic, industrial and agricultural wastes to renewable products (fuel, food, feed, material, energy and chemicals) using smart combinations of chemical and biological technologies. Also during the second phase, the Centre has developed an integrated biorefinery concept through multi-product processing using chemical or biological routes that are being taken up for technology transfer or scaleup. The Centre has expanded its state-of-art facility and procured several high-end equipment's and instruments that not only leads to high level contemporary research but also an accelerated development of several more scalable technologies based on the knowledge base generated. The Centre having completed its second phase in 2018, aims to continue the work in an intensive mission mode for innovative research and translation of developed technologies.

The Centre for Energy Biosciences has attracted a large number of industrial and academic collaborations as a result of its reputation of conducting cutting edge research and delivering viable and scalable solutions to the biotech industry. The Centre is also part of several national and international academic collaborations (Indo-UK, Indo-Australia, Indo-German, Indo-US and several national projects) with grants amounting to more than 10 million USD under various RandD schemes floated by Ministry of Science and Technology, Government of India. The technologies developed at the DBT-ICT Centre have been secured through patent filings across the world. A number of technologies have been already licensed to industries for pilot and commercial scale plants.

CENTRE OF GREEN TECHNOLOGY

Inception of the centre of Green Technology

The Green Technology center at ICT was incepted in 2005 under the potential for excellence scheme of the University of Mumbai. Subsequently, ICT has become a Deemed University and an Elite Center of Excellence in 2008 . Since then the Green Technology programmes are conducted solely by Centre of Green Technology, ICT.

VISION :

To become a globally recognized Green Technology Centre of excellence, through illustrious academic contributions at the national and international level.

MISSION :

- To promote the objectives, principles and outcome of green processes and products.
- To transmit research outcome to industry for making processes and products environmentally benign.
- Human resource development with awareness of environment and hazard related issues.
- To undertake sponsored projects of national relevance.
- To get quality publications in peer reviewed journals, national and international forums for the benefit of scientific community and society.

Programmes offered by the Centre of Green Technology

The center of Green Technology offers an interdisciplinary M. Tech. programme of both part and full time. It also conducts a Ph.D. programme. GATE and GPAT qualified candidates admitted to the M Tech. programme are eligible for fellowships.

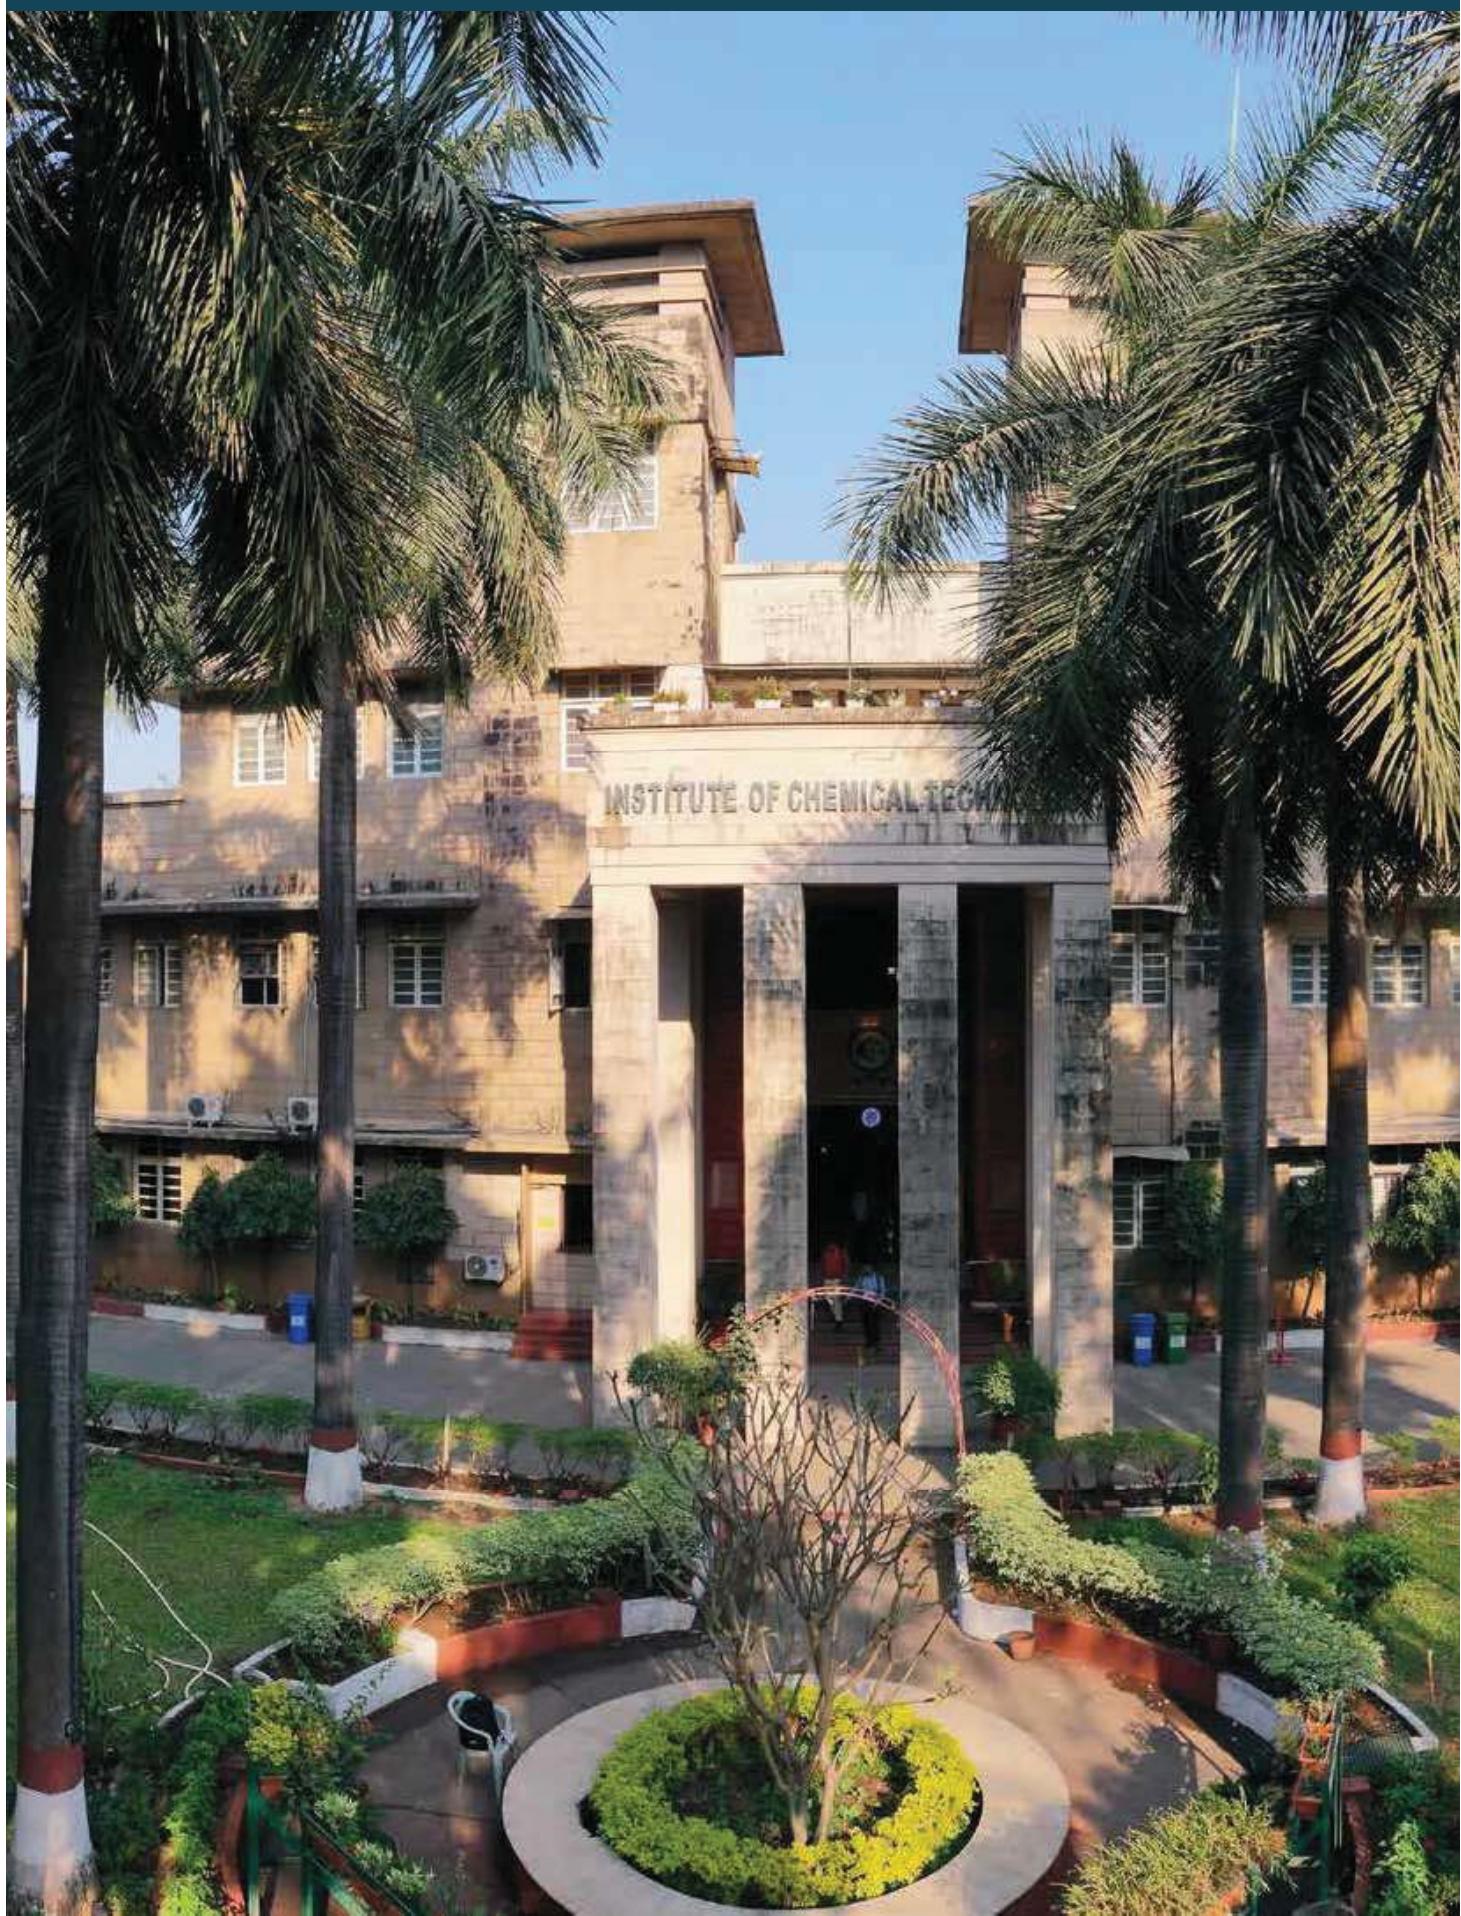

Highlights of the Green Technology programmes

Both the post graduate and Ph.D. programmes in Green Technology at ICT encompass the aspects of green and sustainable science and technology. As the programmes are interdisciplinary, the post graduate and doctoral students get ample experience and support across the Departments of ICT both in terms of research and curricular courses . This broad spectrum expertise is a unique and valuable advantage .

Areas in which research projects carried out in the Centre of Green Technology

- Development of catalysts for energy efficient and green processes
- Synthesis and application of nanomaterials
- Green Technology in pharmaceuticals and drug synthesis
- Conversion of multi-step synthesis into cascade engineered synthesis
- Synthesis of biodegradable chemicals and materials
- Application of biotechnology for sustainability
- Synthesis of safe and benign chemicals with minimum impact on environment.
- Process equipment design and operation to achieve sustainability
- Green Technology for hazard free, benign processes and products

It is hoped that the centre emerge as a model school encompassing various disciplines of science, engineering and technology with the common goal of sustainability and environmental viability.

Faculty Awards and Honors

1. Professor G.D. Yadav, Vice Chancellor was honoured with Honorary Doctorate of Engineering at NIT, Agartala on November 9, 2019
2. Professor G.D. Yadav, Vice Chancellor was elected as President of Indian Chemical Society and has taken charge on November 14, 2019
3. Professor R V Adivarekar was admitted as “Hon. F.T.A. (Fellow of the Textile Association)” for his contribution to the textile industry and association at 74th All India Textile Conference held at Coimbatore in December 2018 of The Textile Association (India). Apart from Professor M.D. Teli, he is the only faculty from ICT to receive this honor.
4. Professor M. Lakshmi Kantam has been selected for the most coveted ICC D. M. Trivedi Lifetime Achievement Award for the year 2018 for her Contribution to Indian Chemical Industry (Education & Research). It will be conferred on her on 27th September, 2019.
5. Professor Vandana Patravale has been selected for Dr. (Mrs.) Manjushree Pal Memorial Award for the Best Pharmaceutical Scientist-2019.
6. India Section of International Academy of Cardiovascular Sciences is recognizing the efforts towards developing affordable and innovative drug eluting stents (presently being marketed in 60+countries by Sahajanand Medical Technologies Pvt Ltd) by conferring Kukreja Oration Award to Professor (Mrs.) Vandana B. Patravale in a Conference which will be held in Feb 2020 at the Delhi Pharmaceutical Sciences & Research University.

1. Introduction

TEQIP-III

Objectives

Technical Education Quality Improvement Programme (TEQIP) implemented by the Ministry of Human Resource Development (MHRD), Government of India, is presently in its third phase. The programme has objectives of building, strengthening and improving quality in engineering education institutions. As part of these objectives, system-level initiatives are to be undertaken that will aim to strengthen governance and performance of affiliated technical universities by improving policy, academic and management practices, and guidelines.

In TEQIP III, there is also a strong focus on capacity building by undertaking twinning programs for growth and development. In this regard, ICT has two twinning partners - Birla Institute of Technology, Mesra, Jharkhand and Government College of Engineering, Keonjhar, Odisha. The twinning programme is based on active involvement in encouraging research and development in areas of mutual and complimentary interest through collaborative projects, by creating opportunities for industrial training and placement, internships, and career counselling. The strength of the twinning programmes will be realized in continuous association and determination to take the programme further to success.

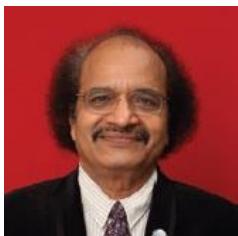

Centre of Excellence in Process Intensification with focus on Green Technology

The Centre of Excellence in process intensification, established with focus on green technology continues to perform successfully. Real life and socially relevant problems are undertaken, enabling interdisciplinary research. The centre currently supports **34** doctoral students.

ICT relentlessly works towards achieving the objectives under TEQIP-III. The activities during June 2019 – July 2020 are presented herein.

Team from Prof. A. B. Pandit lab (Mayur Ladole, Nilesh Jadhav, Sarjerao Doltade and Gaurav Dastane), Institute of Chemical Technology, Mumbai won the first prize at "Climate Launchpad National Finals of Green Start-up Competition 2019" for Water Disinfecting Devices for Rural and Urban India. Now, this team will go to Amsterdam, Netherlands for International finals where there are 53 countries going to participate. This competition is jointly organized by European Institute of Innovation and Technology (EIT) and climate collective.

Students of M. Tech Perfumery and Flavour technology (I & II year) participated in 74th Annual Convention OTAI one day seminar on 'Latest Techniques in Instrumental Analysis' on 14th December 2019

2. Innovation

Status/Plan for Innovation/Incubation

- ICT has actively participated in many national innovation contests such as the Smart India Hackathon (SIH), National innovation contest, etc. UG, PG and PhD students actively participated in these contests.
- For the Smart India Hackathon, one of the teams of ICT had created a novel non-invasive glucometer using vitreous humor (fluid in the eye) and another team had developed a method to find impurities in oilseeds and other grains using a normal camera with their RGB values. The prototypes mentioned in the SIH are being worked on under the guidance of industrial and academic experts.
- Recently, ICT held an Online Covid-19 Challenge in which the teams had to come up with innovative ways to deliver quality education in times like this pandemic. The ideas of the winners are being validated.
- Innovation council cell periodically holds Fireside chats with successful entrepreneurs from various industries. We will be hosting Mr. Nitin Deshmukh in our next fireside chat. The IIC plans on hosting many such fireside chats in the future as well.
- Many competitions were held to promote entrepreneurship. For example, Connexio, a model making competition which addresses real-life industry problems was held in the annual - Chemical Fest 'Vortex'.
- ICT also hosted a two-day E-Cell Summit in which there were talks by entrepreneurs, competitions and seminars, all related to innovation. IIC also has a tie-up with SINE, the incubation centre of IIT-B. Apart from that, the institute and IIC are fortunate to have a large number of industry experts willing to guide young entrepreneurs and shape their innovative minds.
- In the near future, ICT has planned on conducting more seminars based on the theme of innovation. Fireside chats with budding young entrepreneurs will also be organised from time to time.

Activities conducted in the Academic Year 2019-20

- On 21st September 2019, a group of 100 students from ICT-Mumbai visited a post-tree-plantation site of Hariyali Drive. The Hariyali drive focuses on afforestation in the hills of Thane district. Also, Yatn organised a post-plantation care drive in association with Hariyali foundation. A sense of enthusiasm filled the air when all participants gathered on time and started the journey to Navi Mumbai.
- Institute Innovation Council organised Innovation Day celebrations on October 15, 2019. Chief Guest Padma Vibhushan Prof. J. B. Joshi, and Guest of Honour Shri S. M. Mokashi- former President, UAA shared their experiences in this programme.
- ICT has organised a series lectures through Masterclass, presented by VORTEX. The first lecture of the series was given by Mr Deepak Gadhia on 20th August 2019. Mr. Gadhia is the founder of Gadhia solar energy systems. He took the company from a small start-up into the largest manufacturer of Scheffler concentrating systems.
- The second lecture of Masterclass was given by Prof. Bhattacharyya on "Black Holes" on 25th September 2019
- My Story - Entrepreneur's Life & Crossroad by Mr. Abhishek Bansal, the founder of Albans Group and an ICT alumnus was organised on 30th Sept. 2019. Mr. Bansal spoke on his journey from a student to a successful entrepreneur. His talk was very well received by audience of a packed

auditorium and there were many questions and one-to-one interactions. The event was a grand success, and an inspiration to organize more such in the future.

- My Story - Innovator's Life & Crossroad- Motivational Speak: by Sarjerao Doltade on 16 Sep.2019 on the E-cell orientation. Sarjerao Doltade is a Ph.D student who has already secured funding of over Rs 2 crores for his two start-ups. Mr Doltade shared his views on entrepreneurship and explained why entrepreneurship is important. He also shared his own experience, explaining his struggle in establishing his own start-up.
- An Innovative lecture on co-pyrolysis of biomass with plastics to produce high quality biofuels was given by Dr. R. Vinu, Associate Professor, Department of Chemical Engineering and National Center for Combustion Research and Development, Indian Institute of Technology, Madras on 10th October 2019
- E-Cell ICT Mumbai and IIT Bombay organised Illuminate (Entrepreneurship workshop) on 20th Oct. 2019 at ICT.
- 80 students participated in the workshop. Institute Innovation Show Case and promotional event on Science on NATIONAL SCIENCE DAY 28th Feb. 2020
Sentence incomplete the concept behind the event was to convey the importance and joys of a science/ technology, research and innovations to students selected from schools in the vicinity of ICT. The event provided a platform to school students and researchers to showcase their skills and interests in science.

ICT shines at MHRD IIC INNOVATION AWARD 2019

The innovation cell of MHRD (IIC) has taken various initiatives to encourage creative thinking in technology and device development among students of various levels by formation of the Institute Innovation councils. Nationwide competitions were held to hold this spirit and boost innovation and research aptitude among students of higher education. The first prize for the national level best innovation for the year 2019 was awarded to Shri. Amit Sanjay Lokhande pursuing a PhD programme under the guidance of Prof. Padma V. Devarajan in the Department of Pharmaceutical Sciences and Technology, ICT. Amit was awarded this prize

for developing a PREG- \tilde{V} -DET: A kit for the detection of early pregnancy in cattle. From among a total of 1600 applications at state level of which 43 were selected for national level presentation. He received the award at the hands of Hon'ble MHRD minister of India Shri Ramesh Pokhriyal in a grand function organised on 11th September 2019 at AICTE, HQ, New Delhi First annual Innovation Festival of MHRD's Innovation Cell. After that Amit Lokhande was selected as a member of the student delegation to South Korea as a part of India Korea Start-up exchange program from 31st Oct to 4th Nov 2019, funded by MHRD/AICTE Innovation cell, India and CCEI Daegu, South Korea to participated in Global Innovator Festa (GIF) 2019, Daegu South Korea.

Also, among top 10 Innovations Miss. Pooja Todke represented India at Canada India Centre for Excellence (CICE) program at Sprott School of business school, Carleton University, Ottawa, Canada for the innovation titled “NANO-Gr-DET: A Point of Care Blood Group Detection Kit”.

Amit Lokhade receives Hon'ble dignitaries from AICTE and MHRD

Pooja Todke represented India at Canada India Centre for Excellence (CICE) program

Amit Lokhade Receiving Certification from Kyu Hwang Yeon, President at 5th Global Innovator Festa (GIF) 2019, Daegu, South

3. Faculty Development Activities

Sr. No.	Period of Activity	Name	Department	Activity	Location
1.	8/07/2019 to 13/07/2019	Dr. Chandu Madankar	Department of Oils and Oleochemicals Technology	One-week course on Nanotechnology Advances in Engineering Materials and Manufacturing	Department of Production Engineering, VJTI Mumbai
2.	8/07/2019 to 13/07/2019	Dr. A. R. Rao	Department of Polymer & surface Engineering	One-week course on Nanotechnology Advances in Engineering Materials and Manufacturing	Department of Production Engineering ,VJTI Mumbai
3.	8/07/2019 to 13/07/2019	Dr. A. S. Sabnis	Department of Polymer & surface Engineering	One-week course on Nanotechnology Advances in Engineering Materials and Manufacturing	Department of Production Engineering ,VJTI Mumbai
4.	20/07/2019 to 21/07/2019	Prof. S. Sathaye	Department of Pharmaceuticals Science and Technology	CRC Pharma LLC New Jersey, USA organised International workshop on Translational Research Strategies for Drug Discovery and Clinical Development	Radisson Blu Plaza Hotel Banjara Hills Hyderabad
5.	29/07/2019 to 31/07/2019	Dr. S. T. Mhaske	Department of Polymer & surface Engineering	Continuing Professional Development Programme on Holistic Development for Personal & professional excellence	ESCI campus old Bombay road Hyderabad 500032
6.	5/8/2019 to 10/08/2019	Mrs. Madhavi Wadkar	Library	National Workshop on e-Resources Access, Management, and usage Analysis	Infocity Gandhinagar, Gujarat
7.	5/3/2019 to 8/03/2019	Dr. V. Divya	Department of Mathematics	Attend the workshop on " Big Data, Bioinformatics and Proteomics" at IIT Bombay	IIT Bombay
8.	24/07/2019 to 26/07/2019	Dr. V. Divya	Department of Mathematics	Attend the workshop on "Opensource CFD" at IIT Bombay	IIT Bombay
9.	26/07/2019	Prof. R. V. Jayaram	Department of Chemistry	Chief Guest for the inaugural of Alchemy Association - A subject Association of post graduate Department of Chemistry and for the key note address	ST Aloysious college Karnataka
10.	24/7/2019 to 26/07/2019	Dr. V. Divya	Department of Mathematics	Attended workshop on " Machine Learning and its applications in biology for teachers" at IISER Pune	IISER Pune
11.	25/07/2019	Dr. C. S. Mathapati	ICT	Workshop on AICTE Approval Process 2019-20	AICTE , Delhi

Sr. No.	Period of Activity	Name	Department	Activity	Location
12.	24/5/2019 to 21/7/2019	Mhir Panda aditi Yerudkar	Department of Chemical Engineering	Project execution on CFD using OPEN foam software	
13.	17/8/2019 to 21/8/2019	Dr. Nabanita Sadhukhan	Department of Dyestuff Technology	Workshop on " Strategic Quality Initiatives in Technical Education"	at Mount Abu
14.	1/8/2019	Dr. Neetu Jha	Department of Physics	Attended Swayam Course Nanotechnology Sciences and Applications	Swayam FDP course
15.	10/8/2019	Prof. P. V. Devarajan and Amit Lokhande	IIC Cell	Attend the one-day workshop on " Art of Reasoning & critical Thinking"	All India Institute Andheri Mumbai
16.	5/7/2019 to 8/7/2019	Prof. U. S. Annapure & Dr. A. Kalekar	ICT	Faculty development programme for Students Induction programme organised by AICTE	At O Sandhan, Bhubaneshwar
17.	13/9/2019	Dr. R. D. Jain	Department of Chemical Engineering	Attend Select Bio : Lab on a Chip and microfluidics conference	Biosciences India Pvt Ltd, Hyderabad
18.	13/9/2019	Dr. P. D. Jain	Department of Chemical Engineering	Attend Select Bio : Lab on a Chip and microfluidics conference	Biosciences India Pvt Ltd, Hyderabad
19.	22/8/2019 to 23/8/2019	Dr. A. R. Rao	Department of Polymer & surface Engineering	National Conference on " Materials for Advanced Technology & Applications"	G. S. Mandal's Maharashtra Institute of Technology Beed Bypass Road Aurangabad
20.	10/8/2019	Dr. S. Reshamwala	DBT ICT	Attend the workshop on " The art of reasoning and critical thinking"	LOGOS organizes at Andheri Mumbai
21.	2/9/2019 to 7/9/2019	Prof. N. Sekar	Department of Dyestuff Technology	IIT Hydrabad organized short term course on " Concepts and applications of the finite element method	IIT Hyderabad
22.	25/11/2019 to 29/11/2019	Prof. R. N. Jagtap	Department of Polymer & surface Engineering	Quality Improvement programme on " Waste -To Wealth Paradigm Practice and Potential	IIT Kharagpur
23.	19/9/2019 to 21/9/2019	Prof. M. S. Degani	Department of Pharmaceuticals Science and Technology	Attend the SSX-2019 4th International Conference Society for the study of Xenobiotics SSX -India Theme: Exploring impact of ADMET and Modelling Science & Technology on drug discovery and Development	SSX India

Sr. No.	Period of Activity	Name	Department	Activity	Location
24.	22/2/2019 to 25/02/2019	Pritesh Patil	Department of Chemical Engineering	Conference on Smart Materials for sustainable Technology	Bogmallo Resort Goa
25.	11/10/2019 to 13/10/2019	Prof. V. R. gaval and Dr. R. S. N. Sahai	Department of General Engineering	International conference on Polymer Processing and characterization (ICPPC-2019)	Mahatma Gandhi University Kottayam Kerala India
26.	11/9/2019	Dr. V. H. Dalvi	TEQIP	Attend the first Innovation Festival organised by MHRD Innovation Cell	New Delhi
27.	11/10/2019 to 12/10/2019	Dr. A. R. Rao	Department of Polymer & surface Engineering	5th International Conference on Polymer Processing and characterization	Kottayam Kerala India
28.	31/8/2019 to 1/12/2019	Sandip Kale	DBT ICT	Intellectual Property certificate courses by FICCI	FICCI, New Delhi
29.	31/8/2019 to 1/12/2019	Dr. Pooja joshi	DBT ICT	Intellectual Property certificate courses by FICCI	FICCI, New Delhi
30.	31/8/2019 to 1/12/2019	Deepak Sarda	DBT ICT	Intellectual Property certificate courses by FICCI	FICCI, New Delhi
31.	1/8/2019 to 31/12/2019	Dr. Mohan Narayan	Department of Physics	NPTEL Online Certification Course	Online
32.	25/11/2019 to 29/11/2019	Dr. R. D. Kale	Department of Fiber &Textile Processing Technology	Attend the workshop on "Waste: the paradigm, practice & potential " at IIT Kharagpur	IIT Kharagpur
33.	18/9/2019	Dr. Vivek Gaval	Department of General Engineering	Swayam Course on " Fundamentals of surface engineering mechanisms, processes and characterizations"	Swayam FDP course
34.	14/10/2019 to 18/10/2019	Prof. A. v. Patwardhan	Department of Chemical Engineering	Attend the Professional development training programme at IIT Trichy	IIT Trichy
35.	11/10/2019	Prof. V. B. Patravale	Department of Pharmaceuticals Science and Technology	Participated in 24th Annual National Convention od Association of Pharmaceuticals Teachers of India at Dehradun Uttarakhand	Dehradun Uttarakhand
36.	27/9/2019 to 28/9/2019	Prof. P. V. Devarajan	Department of Pharmaceuticals Science and Technology	RISC-2019: Rural Innovates Start -up Conclave	National Institute of rural Development and Panchyati Raj, Hyderabad

Sr. No.	Period of Activity	Name	Department	Activity	Location
37.	13/12/2019 to 15/12/2019	Prof. R. R. Deshmukh	Department of Physics	International conference on Liquid crystals, Liquid crystalline Polymers and Nanosystems ICLCPN-2019	International unit on Micromolecular science and Engineering, Mahatma Gandhi University, Kottayam, Kerala
38.	21/10/2019 to 25/10/2019	Dr. A. S. Rane	Department of Mathematics	Attend the workshop on " Mind Meditation and Human Values- A scientific Perspective"	IIT Delhi
39.	15/12/2019 to 23/12/2019	Prof. S. P. Deshmukh	Department of General Engineering	National workshop on "Strategic Quality Initiatives in Technical Education"	Port Blair
40.	11/11/2019 to 15/11/2019	Dr. V. H. Dalvi	Department of Chemical Engineering	One-week training programme on Introduction to machine Learning and Deep Learning with Applications to Engineering Systems	Government college of Engineering Jalgaon
41.	19/10/2019	Prof. U. S. Annapure	Department of Food Engineering & Technology	One day National Multidisciplinary Conference on Nature resource based sustainable development with special reference to tribal community rights	Shikshak Sanchalit Shikshan Sanstha, Palghar
42.	25/11/2019 to 29/11/2019	Prof. R. V. Adivarekar	Department of Fiber &Textile Processing Technology	Workshop on Waste to wealth the Paradigm, practice, and potential	IIT, Kharagpur
43.	22/10/2019	Dr. Ajit Kumar	Department of Mathematics	NPTEL Online Certification course Operations research	Swayam course
44.	12/09/2019 to 13/09/2019	Prof. P. V. Devarajan	IIC Cell	Conference on Dissolution Science and Applications Theme: Ensuring Built-in Quality through Dissolution Studies	Radisson Blu Plaza Hotel Banjara Hills Hyderabad
45.	18/12/2019 to 20/12/2019	Prof. U. S. Annapure	Department of Food Engineering & Technology	ICFOST-2019 Conference	Tezpur University, Karnataka
46.	29/11/2019	Dr. Amit Pratap	Department of Oils and Oleochemicals Technology	Brain storming session on "Value Added Products of castor" at Hyderabad Telangana state	ICAR-Indian Institute of Oilseeds Research, Hyderabad
47.	4/11/2019 to 23/11/2019	Dr. Pawan More	Department of Chemistry	Orientation programme at University of Mumbai	UGC Human Resource Development Centre University of Mumbai

Sr. No.	Period of Activity	Name	Department	Activity	Location
48.	25/11/2019 to 29/11/2019	Dr. Reena Pandit	DBT ICT	AICTE Quality Improvement programme ‘Waste to Wealth Paradigm Practice and Potential’	IIT Kharagpur
49.	16/12/2019	Prof. V. R. Gaval and Mahesh Divekar	Department of General Engineering	One day Proficiency Improvement Programme on Advances in Plastic Moulding the Automotive Research Association of India	ARAI Pune

Prof. V. R. Gaval and Dr. R. Sahai presenting their research papers at ICMMAP held at kottayam between 11th Oct to 13th October 2019

Dr. Sandeep More attended the international Conference “International Conference on Advances in Chemical and Material Sciences” at Department of studies in chemistry Mangalore University, Mangalagangothri, Karnataka, India during October 17-19, 2019.

Prof. A. V. Patwardhan has participated in the “Professional Development Training” during 14th to 18th October 2019 at Indian Institute of Management Tiruchirappalli.

Prof. R. R. Deshmukh and Prof. U. S. Annapure attended the First International conference on "Advances in Plasma Science and technology (ICAPST) organised by department of Physics Shri shakti Institute of Engineering and Technology, Chennai during 12-14 February 2020

5.	19/09/2019 to 20/09/2019	Department of Pharmaceuticals Science and Technology	8th Indian Chitin and Chitosan Society Symposium at Institute of Chemical Technology, Mumbai	Students
6.	27-28/07/2019 & 3-4/08/2019 &10-11/08/2019	Department of Chemical Engineering	Six day workshop over three weekends in July -Aug 2019 in the IPC on " PyCT2019: Python and Machine Learning"	Students
7.	16/07/2019	DBT ICT	Awareness Session on BIRAC's Biotechnology Ignition Grant (BIG) by Dr. Shraddha Chauhan Manager IIT Bombay	48 Students
8.	4/08/2019 to 7/8//2019	ICT	Youth Empowerment and Skills 4-day continuous program by Shreyans Mehta State Youth Coordinator – Maharashtra, for Art of Living Programs	101 Students
9.	21/8/2019 to 22/8/2019	Department of Fiber &Textile Processing Technology	Two days workshop titled ' Analysis of Basics chemicals Textile Auxiliaries colourants' by Dr. Kedar Kulkarni	34 Students
10.	19/8/2019 to 21/8/2019	ICT	Workshop on Decoding Cyber Security Crimes, at ICT	Students, Staff & Faculty
11.	20/8/2019	ICT	Workshop on "Positive thinking + Creativity" by Prof. A. B. Pandit for support staff	18 Support Staff
12.	30/8/2019	ICT	Workshop on Decoding cyber security crimes for support staff by Cyber Security Corporation Pune	30 Support Staff
13.	19/8/2019 to 21/8/2019	ICT	Workshop on Decoding Cyber Security Crimes by Cyber Security Corporation Pune.	Students, Staff & Faculty
14.	13/9/2019	Department of Chemical Engineering	The Asian And Mideast Institute of Chemists (AMIC) organised a Refresher course in Chemical Engineering for chemists	Dr. P. R. Gogate
15.	19/9/2019 to 20/9/2019	Department of Pharmaceuticals Science and Technology	8th Indian Chitin and Chitoson Society symposium at ICT Mumbai	145 Students
16.	29/9/2019	TEQIP	TA Fresher's 2019 Personality contest, One man show , Solo Dance Rap, Fashion Show	280 UG Students
17.	9/10/2019	Department of Fiber &Textile Processing Technology	Orientation of First year B Tech /M Tech/ Msc students	130 UG, PG students
18.	16/11/2019 and 23/11/02019	Department of Dyestuff Technology	Workshop: Literature Survey: How to use e sources effectively" by Dr. Vivek Patkar Vice President Marathi Vidnyan Parishad	83 Students
19.	10/10/2019	ICT	Celebration of Foundation day of ICT at KV auditorium	Students of ICT
20.	16/11/2019	Department of Chemical Engineering	One day seminar on "Green technology"	35 students

Sr. No.	Period of Activity	Department	Objectives	Beneficiaries No.
21.	15/11/2019 and 18/11/2019	ICT	Two days workshop on Early childhood care and development by Dr. Swati Partani, Maniben Nanavati College Mumbai	6 Faculty and 12 Staff
22.	02/12/2019	Department of Pharmaceuticals Science and Technology	Informative seminar on Applications of Cytagion 5 (Cell imagining multimode reader from Bio Tech Instruments) for cellular studies	39 Students from the department of PST
23.	19/12/2019	Department of Fibers &Textile Processing Technology	Workshop on Statistics with Statecraft by Mr. Saurabh Agarwal, HBTU Kanpur	30 Research students
24.	27/12/2019	Department of Chemistry	Workshop titled 'Emerging Trends in Organic Synthesis'	36 Students
25.	5/12/2019	Department of Oils and Oleochemicals Technology	Workshop on Literature Survey to train the PG and PhD students on how to do a literature survey and review it by Dr. Vivek Patkar	65 Students

Art of Living: Student Excellence & Learning Program (SELP)

“Student Excellence & Learning Program (SELP)” and “Yoga for Youth Empowerment and skills program” delivered by Vyakti Vikas Kendra India scheduled from 4th -7th Aug. 2019 during Induction Program at ICT. The programs were largely appreciated by students and found useful for enhancement of learning capabilities thereby employability.

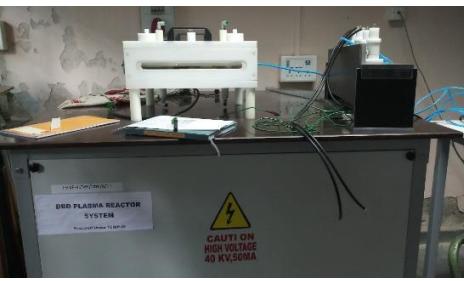

ICT E-Cell & Innovation council hosted a flagship event – ‘E-Summit’ on 18th and 19th January 2020 with Dr. Abhay Jere, Chief Innovation Officer, MHRD, Government of India as the Guest of Honour who delivered the Key Note Address. ‘A spectacular event in which over 400 budding young student innovators and to be entrepreneurs from all over the country participated in challenging competitions and upskilling workshops. In the summit eminent personalities from Government organisations, industry, national institutes such as Dr. Unnat Pandit (Program Director, Atal Innovation Mission, NITI Aayog), Mr. Shashank Randev (Founder VC at 100X.VC), Dr. Omkar Rai (Director General STPI), Dr. Arokiaswamy Velumani (Founder and MD, Thyrocare), Gaur Gopal Das (lifestyle coach & motivating Speaker), Mr. Sachin Teke (Founder m-indicator) delivered inspiring and thought-provoking talks. The event was jointly organised with TEQIP-III twinning partner BIT, Mesra. The event has motivated students to dream of becoming entrepreneurs and triggered innovative thinking.

Department of Chemistry conducted Techfest of “RASAYANAM 2020” during 16-17 January 2020

5. Twinning Programme

ICT is mentoring two Institutes under TEQIP-III; Birla Institute of Technology, Mesra and Government College of Engineering, Keonjhar. The initiatives undertaken as a mentor institution include strengthening networks between mentee institutions to foster collaboration by conducting workshops and seminars, facilitating student visitations and summer internships, and creating opportunities for industry readiness. A detailed list of activities carried out for under twinning and mentoring program is listed in the table below.

Birla Institute of Technology, Mumbai

Action Plan: 19-20

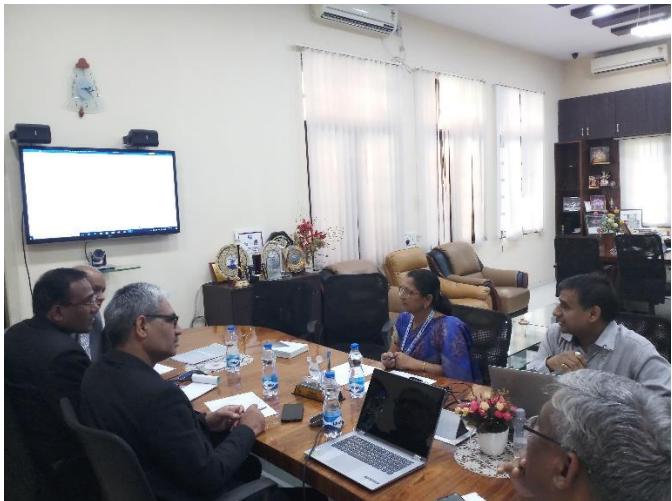

S. No	Suggestive activity	Remark / Comment	Activity Approx. Date
1	The action plan for twinning activities implemented in last year and & current year planned	Revision and Completed	31 st Jan 2020
2	No. of courses/ classes/workshops conducted by the faculty of Institute under subcomponent 1.3 for students of 1.1 institute for training and academic development and vice versa (Min 1 per program per year).	Two workshops (i) Advanced Materials- Synthesis, instrumentation, and characterization (ii) Soft Computing	1 st week March 2020
3	No. of courses delivered by 1.3 institution for students of 1.1 institutions (Min 1 per program per year). (10% syllabus covered).	Dr. A. K. Rane for Mathematics Dr. Ramakanta Nayak for Physics and Dr. Rambabu Dandela for Chemistry subjects	7-8 th Nov. 2019 15-28 Feb 2020 2-7 th March 2020
4	No. of Trainings conducted for faculty/ support staff of 1.1 institute by Institute under sub component 1.3 for training and academic development and vice versa (Min 1 per program per year).	DECODING CYBER SECURITY CRIMES (For faculty of GCE) Library staff and a few support staff from administration will be trained at ICT	19-21 st Aug. 2019 April 2020

5	No. of Seminars / Techfest, and conferences conducted by Institute under sub component 1.3 for 1.1 institute for students to share research and discuss technological advancements in dynamic industrial and business environment (Min 1 per year).	VORTEX: 19 MANZAR (Entrepreneurship) (i) International IEEE conference on “Intelligent for smart power system and sustainable energy” at GCE, Keonjhar (ii) International conference on “Advances in Civil engineering” at GCE Keonjhar (iii) International conference in Mechanical Engineering at GCE Keonjhar	10-13 Oct. 2019 30 th to 31 st Jan 2020 23rd and 24 th April 2020 23 and 24 th May 2020
6	% of faculty perusing collaborative research (10%).	Deferred	
7	No. of departmental partnership for joint research activities for applied research and technological development (1 per program) Or Exchange and adoption of good academic-administrative practices between the twinning partners	Biometric system practiced at ICT (admin) Studio developed for lecture recoding (academic)	31 st Jan 2020 4 PM
8	Number of Industry partnership for joint R & D, and internships (Min 1 per year).	Faculty and students from Civil Engg. And Mech Engg. Department of GCE will be at ICT for Joint R&D Internships during May/ June 2020 with Capacit'e Infraprojects Limited.	Cancelled due to COVID Pandemic
9	Career Planning Sessions by 1.3 institution for 1.1 institution (2 Sessions).	Visit of Industry personnel will be arranged by Dr D. D. Sarode during March / April 2020	Cancelled due to COVID Pandemic

6. Centre of Excellence - Process Intensification with focus on Green Chemistry

The Centre of Excellence in process intensification has been established under TEQIP. Currently, 36 projects are on-going which are ably led by nearly 30 faculty members and 34 research associates from different departments. A detailed list of research projects being carried out is listed in the table below.

Project Title: Synthesis of 5-Hydroxymethyl Furfural (HMF) from chitosan biomass using ionic liquids (ILs)	
Guide	Student
Dr. Ratnesh Jain	Pankti Ganatra
Department	Chemical Engineering
Project Abstract: The current paucity in fossil fuel reserves and the concerns about global warming have paved the way for the utilisation of sustainable resources in the coming future. As an efficient alternative, biomass sources, especially carbohydrate derivatives are highly abundant, widely	

distributed in nature and are renewable. They serve as greener and sustainable raw materials for manufacturing numerous valuable intermediates (such as alcohols, carbonyl compounds and carboxylic acids) for the chemical industry and for the production of various polymeric materials.² Amongst the speciality chemicals, 5-hydroxymethylfurfural (HMF) is a potential building block for a variety of industrially important organic molecules, for more than one hundred and seventy-five valuable bio-based products, as well as twenty high-performance polymers. In recent times, considerable efforts have been made by various researchers to produce 5-HMF from lignocellulosic biomass. However, efficient production of 5-HMF suffers due to the need of specific solvents and catalytic system.⁴ During the past decade, chemical applications of ionic liquids (ILs) have received increasing attention. This is because of their enormous potential as a green solvent, which could also work as a “designer solvent” and “catalyst”.³ ILs are normally defined as salts that are liquid below 100 °C and exhibit unique characteristics, such as negligible vapour pressure, no flammability, high thermal stability and close to infinite structural variation. Chitosan, obtained by the deacetylation of chitin, is the second most abundant biopolymer after cellulose. It is readily available from crustacean waste such as crabs, shrimps and also from fungi, in a range of molecular weights, ranging from 5×104 to 2×106 Da and degrees of deacetylation, from 40 to 98%, respectively.⁶ Additionally, chitosan exhibits great structural similarity to cellulose, thus establishing itself as an important biomass for the synthesis of HMF. The combination of ILs and HMF production has become an important field in its own right, since ILs benefit the selectivity of the conversion of hexoses to HMF and open up the possibility of one-pot reactions, directly based on crude biomass.⁵ Over the years, the major problem observed in the synthesis of HMF in aqueous conditions is that the selectivity of the reaction is hampered by the irreversible hydrolysis of HMF to formic acid and levulinic acid. High yields can be obtained in high-boiling solvents such as DMSO, but suffer from difficult product recovery. Another important side reaction in the dehydration of hexoses is the formation of polymers known as humins. These species are formed from different intermediates in the reaction and their rate of formation increases as the concentration of the reacting sugar increases. These side reactions may be prevented by utilising ILs for the synthesis of HMF from chitosan, wherein they would not only act as a solvent, but may also work as a catalyst and increase the yield of 5-HMF. Thus, the present research work will focus on the synthesis of 5-HMF from chitosan, using ionic liquids, with an objective to maximise the yield of 5-HMF. The aim is to explore a variety of ILs and green conversion methods to maximise the production of 5-HMF. In addition to this, the effect of different operating parameters, in each stage of conversion to the final, value added product, will be investigated.

“Functional Dyes, Way to Bypass ‘Finishing’ In Textile Manufacturing”	
Guide Name:	Student Name:
Dr. Sandeep P. More	Pranay Satardekar
Department	
Fibres & Textile Processing Technology	
Project Abstract:	
The ‘Finishing’ is one of the most vital part of textile wet processing technology as it imparts end value to the textile materials, however finishing industries are most chemical intensive industries and lead to create huge pollution load on environmental systems. In order to bypass the post effluent problem of these finishing processes we need to focus on developing the solutions which will carry out both dyeing and finishing simultaneously and helps to reduced	

combine effluent effect of both dyeing and finishing on the environment. The designing and synthesis of novel Functional Dyes will be the key to achieve this efficacy. The aim of the research is to synthesize different derivatives of functional dyes and study its various physio-chemical properties for the development of the existing conventional textile processing and also decides its application in various fields of smart textile and chemistry based on its properties.

Project Title:	Colour Removal from Textile Effluent using emulsions.	
Guide Name:	Student Name:	
Prof. (Dr.) Ravindra D. Kale	Babita U. Chaudhary	
Department		
Fibres & Textile Processing Technology		
Project Abstract:		
<p>Now a day's emulsion technique is emerging as an effective method for color removal from textile effluent. Here, water in oil nano-emulsion was used for removal of color from textile effluent. Two nano-emulsions, i.e., turpentine oil emulsion and cyclohexanol emulsion, were prepared by using high-speed homogenizer followed by ultrasonication. The textile dye effluent of reactive dyes (Reactive Blue 21 and Reactive Black 5) was treated with turpentine emulsion with a treatment ratio of 1:1, 1:3, 1:5, 1:7, 1:10 at room temperature. Similarly, cyclohexanol emulsion was used for the treatment of Reactive Blue 21 and Reactive Black 5), direct dye, acid dye, basic dye, Disperse dye and metal complex dye The treatment ratio of 1:1, 1:3, 1:5, 1:7, 1:10 was maintained for reactive dyes and 1:10 for the remaining dyes at room temperature. The treated effluent was tested for color removal efficiency as well as COD and BOD. Also, in this study, the reusability of emulsion and recovery of the solvent was also investigated. The characterization of emulsions such as particle size and zeta potential, were also carried out.</p>		

Project Title:	
Development of Nanocellulose from Biomasses and its Modification for the Application in New Generation RO Membrane	
Guide Name:	Student Name:
Prof (Dr).S.T.Mhaske	Dhananjay Arun Patil
Department	
Polymer & Surface Engineering and Technology	
Project Abstract:	
<p>We intend to develop a chemically benign process for shape selective preparation of nanocellulose in a large scale using various naturally sourced raw materials such as cotton, linen, jute and other wastes biomass. We would then</p>	

modify their surface through a combination of mechanical and chemical means and investigate for relevant applications. The modification will include surface functionalization with suitable molecules to obtain materials with varying surface energies, which could be used as an alternative to conventional RO membranes for water purification, deposition on surface without compromise on surface aesthetics for facile cleaning and stain repellency.

Project Title:	
“Utilization of waste for value added products using novel and green technology Utilization”.	
Guide Name:	Student Name:
Prof. V.K.Rathod	Jyoti Dhananjay Londhe
Department	Chemical Engineering
Project Abstract:	
This project is aiming to extract oil from seeds of manilkara zapota (chikoo seeds) by using Three Phase Partitioning (TPP). TPP is a recent advancement in the field of oil extraction, for partial purification of protein. This process makes use of t- butanol as a solvent and ammonium sulphate as a precipitating salt. The slurry of material is prepared by adding sample seeds to water with continuous stirring. This is followed by the addition of ammonium sulphate and t-butanol subsequently under constant stirring. After completion of extraction, the mass is centrifuged, and the upper organic layer containing oil is removed and evaporated to obtain the oil. Different parameters like solute to water ratio, slurry to t-butanol, slurry to salt, time are optimized.	

Project Title:	
“Lipase catalysed synthesis and its applications”	
Guide Name:	Student Name:
Dr. Hemchandra K.Chaudhari	Suraj Shyamkumar Kapale
Department	Pharmaceuticals sciences and Technology
Project Abstract:	
Lipases (triacylglycerol acyl hydrolases, E.C. 3.1.1.3) are pervasive enzymes of considerable physiological implication and industrial potential. Lipases occur broadly in nature; however microbial lipases are commercially important. This project entitled “Lipase catalysed synthesis and its applications” showcased use of microbial lipases in synthesis of intermediate and active drug moiety for pharmaceutical usage. Enzyme catalysis mostly follows twelve principles of green chemistry which shall not be overlooked by looking the current scenario of pollution created through wastes from chemical factories. Keeping these points in mind and our interest in developing new technologies for synthesis of medicinally important heterocycles. The project mainly deals with the easily available lipase enzyme which can be used for three component condensation leading to the formation active drug moiety of which are considered to be highly important in medicinal products. The approach toward the formation of active drug moiety is as shown in	

figure 1. The confirmation of formation of active drug moiety was briefly done by IR spectroscopy, Mass Spectroscopy and NMR. As discussed earlier, lipases are becoming increasingly important in high-value applications and we broadly cover one aspect of its application in medicinal field. The characterisation, optimization and large scale up of the reaction is ongoing. Overall this project widely focusses on the lipase and its estimation in pharmaceutical fields which will be very beneficial for society.

Project Title:	
” Intensification of Synthesis of Levulinic acid as building block and subsequent conversion to MTHF using ultrasonic irradiations”.	
Guide Name:	Student Name:
Prof. P.R.Gogate	Madhuri M. Kinenge
Department	Chemical Engineering

Project Abstract:

The demand for petroleum dependent chemicals and materials has been ever increasing despite the dwindling of their fossil resources. Considering the eventual fate for the petroleum based industry, significant attention is being given to obtain the valuable chemical resources from alternative routes especially based on the sustainable biomass, which falls into the category of green chemistry. Due to the fact that lignocellulosic biomass is the most abundant and renewable biomass available on the earth, there is a huge potential for converting lignocellulosic biomass into platform chemicals or the building blocks which can then be used for a variety of chemicals. Despite the potential, the conversion process is marked by disadvantages of requirement of high processing times, harsh chemicals/solvents, multiple processing steps and most importantly higher costs of production. Use of a process intensification approach such as ultrasound assisted processing can lead to development of efficient processes that can give greener routes for the production of chemicals and more importantly in a cost effective manner. Passage of ultrasound through a liquid medium generates cavitation effects such as liquid streaming, turbulence, intensified rates of transfer, thermal hot spots and production of radicals which can play a major role in deciding the extent of intensification of chemical reactions. Reactions, which are otherwise slow or do not occur at ambient conditions can be intensified by 2 to 50 times or made to occur under less conditions with the help of cavitation. Though lot of efforts have been made to study effect of ultrasound on different reactions, dedicated efforts to develop processes for efficient conversion of biomass into value added chemicals with possible intensification using ultrasound are lacking. Considering this analysis, the present project focuses on understanding the role of ultrasound in intensifying the reactions as well as pretreatment fundamentally considering the controlling reaction mechanism and the rate controlling steps. Balanced coupling the chemistry aspects (identification of reaction mechanisms, understanding the effect of various parameters

and the key rate controlling steps) with the chemical engineering aspects (optimization of operating parameters, intensification using ultrasound and scale up of ultrasonic reactors) forms the main factor that prompts the success of the proposed project. The model building block and the target value added chemical selected in the work include levulinic acid and methyltetrahydrofuran respectively but the design related information generated in the project are likely to be applicable to all such building blocks and subsequent conversion processes.

Project Title:	Finishing of Nonwovens using green technology.	
Guide Name:	Student Name:	
Dr. Usha Sayed	Swati Ravindra Korgaonkar	
Department	Fibres & Textile Processing Technology	
Project Abstract:		
<p>Today consumers are becoming more aware of the need to protect the environment, and companies use these terms to promote their goods or services with eco-labels. Environmentally friendly (also eco-friendly, nature friendly, and green are terms used to refer to goods and services, laws, guidelines and policies claiming to inflict minimal or no harm on the environment. Clothing is an integral part of our lives and green or environmental concerns have started to draw more and more attention in the textile and clothing sector. Eco friendly clothing is created from resources that are environmentally friendly and sustainable. Consideration is given to the product's total life span as well as its impact on the planet, in other words, the carbon footprint .Eco friendly clothing is created from resources that are environmentally friendly and sustainable, and efficient management of obtaining green clothing requires to consider all stages, starting from designing for the environment, obtaining raw materials, producing garments, distributing them to the channels, stores and also considering their reverse logistics and waste.</p> <p>The competitive environment forces industries to redesign their existing structures and to attain sustainable approach via research and development.</p> <p>Nonwoven fabrics are engineered that may be a limited life, single- use fabric or a very durable fabric. Nonwoven fabrics provide specific functions such as absorbency, liquid repellency, resilience, stretch, softness, strength, flame retardancy, washability, cushioning, filtering, bacterial barrier and sterility. These properties are often combined to create fabrics suited for specific jobs, while achieving a good balance between product use-life and cost. They can mimic the appearance, texture and strength of a woven fabric and can be as bulky as the thickest paddings. In combination with other materials they provide a spectrum of products with diverse properties, and are used alone or as components of apparel, home furnishing, health care, engineering, industrial and consumer goods. Thus, this project deals with modification of nonwoven materials for numerous applications like medical wipes and hygiene products like bandages, wound, dressings, surgical gowns, drapes and covers, caps and face masks and also wipes for personal care market.</p>		

Project Title: Development of organic solvent resistance nanofiltration	
Guide Name: Dr. Parag R. Nemade	Student Name: Olviya Gonsalves
Department	Chemical Engineering
Project Abstract:	
Solvent resistant nano-filtration also called, as Organic solvent nanofiltration is a pressure driven filtration and excludes the use of extra energy consumption. Hence, SRNF can be cost and energy-effective. In this research, Poly aryl ether ketone (PAEK) is the polymer used for development of organic solvent nanofiltration. PAEK has high mechanical stability, high temperature resistance and is chemically inert to organic solvents. Phase inversion technique used for development of OSN. Development of PAEK membrane under different conditions, different polymer concentration, and different pore forming agents for nanofiltration. Perform studies related to ternary phase diagram for PAEK-Solvent-Antisolvent and stability of the membrane to different solvent. Application for dye separation in presence of solvent for enhancement of dye concentration.	

Project Title: “Biobased, Nano formulations of nonedible vegetable oils for pesticidal applications.”	
Guide Name: Prof. Jayashree M Nagarkar	Student Name: Kartiki B Jadhav
Department	Chemistry
Project Abstract:	
<p>Use of synthetic pesticides is associated with various disadvantages such as environmental pollution, development of resistance in pests and hazards to aquatic life. —Neem oil, Karanj oil and Castor oil are natural pesticides and have excellent pesticidal properties. Karanj based products are found to be effective against insect pests of stored grains, field and plantation crops, and household commodities. Hence this oil is emulsified by using a biobased surfactant.</p> <p>Surfactant plays a key role in stabilizing these emulsions. Most of these formulations are stabilized by using either ionic or nonionic surfactants. They pose severe problems to the environment if these surfactants are not biodegradable. Biobased surfactants can replace them partially and reduce the problem to some extent.</p> <p>The proposed study would lead to green, cheaper, simple and feasible optimized process of emulsification of nonedible vegetable oils using biosurfactant..Karanj oil and extract of biosurfactant form nanoemulsion. The application of such formulations can be extended for pest control.</p>	

Project Title:	Green advantages of Metallosurfactants in organic transformation-solubilization, rate enhancement, and product separation.	
Guide Name:	Student Name:	
Prof. Radha V Jayaram	Hanuman N Gaike	
Department	Chemistry	
Project Abstract:		
<p>In fine chemicals and pharmaceuticals industry, there is growing awareness for greener, more sustainable technologies & efficient chemical synthetic approaches to reduce environmental and health hazards. Lately, use of alternative reaction media that circumvent the problems associated with volatile organic solvents (VOC) has attracted lots of attention. Although aqueous solvent is cheap and easily available alternative to VOCs, its use is hindered, in case of poorly water-soluble reactants. In such case, surfactants can be used as an inert solubilizing agent to resolve solubilization problem, which can also act as a catalyst. Surfactants are amphiphilic molecules adsorbs at the interfaces & reduces surface tension between the two immiscible phases. At critical micelle concentration (CMC), it spontaneously self-assemble to form intricate structures, called "micelle". Micellar system has been extensively explored in chemical reactions as it offers enhanced reaction rates and selectivity. This effect is referred to as micellar catalysis, occurs due to an increased local concentration of the reactants at the surface or in the interior of the micelle; stabilization of the transition state of the reaction due to a favourable interaction with the surfactant molecules; and a combined polarity, microviscosity, and charge effect inside the micelle etc. However, it has been observed that surfactants produce rather modest rate effects. To exploit the benefits of micellar catalysis it is imperative to have certain modification in structure of surfactant molecule to impart certain functional modalities. Metallosurfactants are such class of functional surfactants in which transition metal ion is present as structural component. Due to presence of transition metal ion in surfactant molecules the properties associated with these metal ions like magnetic, electrical, redox and catalytic properties can be impart to the surfactants and hence can bring at the interface of the system. Metal ions are well known to have template effects and assist chemical reactions in several ways such as Lewis acid catalysis; charge neutralization; activation of nucleophilic functions or coordinated water molecules by substantially decreasing their pKa, and, hence, nucleophilic catalysis; assistance in leaving group departure etc. Our proposed work is mainly focus on synthesis of new metallosurfactants and its application as catalysts in various organic transformations.</p>		

Project Title:	"Novel Cloud Point Extraction (CPE) of Bio-actives from Fruit Industry Waste."	
Guide Name:	Student Name:	
Dr. Shalini S. Arya	Pavankumar More	
Department	Food Engineering and Technology	
Project Abstract:		

Food industry has experienced a revolutionary development for more green and efficient technologies for extraction of food bio-actives due to the technical, scientific and economical headrace of traditional extraction techniques. These food bio-actives are vital nutrients that are present in food in very small quantities. Fruits, vegetables and their waste are potential sources of bio-actives later is sensitive to temperature, light and oxygen.

Cloud point extraction (CPE) is one of novel; green; energy and cost-efficient extraction technique of bio-actives used for this study which works at temperature within 50-60 °C with food grade, non-toxic, safe and environment friendly non-ionic surfactants. CPE reduces the consumption of solvent, extraction time and disposal costs. As compare with other techniques; this has some advantages like low cost, speed, better efficiency, environmentally lower toxicity and safety. The CPE aids the extraction of bio-actives from fruits, vegetables and medicinal plants, it also used to separate and purify the proteins, analysis of food constituent, additive, mineral and residues of pesticide, antibiotic and packaging material. There are some factors which affect CPE efficiency, such as surfactant type & concentration, pH, electrolytes concentration, equilibration temperature and extraction time.

With the hypothesis of successful use of the cloud point extraction technique for effective and green extraction of food bio-actives from fruit and waste with better quality and their successfull application in foods with effective antioxidant, health beneficial colorant and preservative properties.

Project designed with principle objectives were:

1. To optimize the Cloud Point Extraction (CPE) conditions for better extraction recovery and quality of bio-actives.
2. To compare the CPE with conventional method.
3. To develop the degradation kinetics for bio-actives due to cloud point extraction.
4. To study the shelf-life and food application /evaluation of extracted bio-actives.

Outcomes of the projects till date are:

Study concluded that CPE method can be successfully applied in the extraction of bioactive from any food systems for clean and green extractives label.

CPE will be a suitable alternative to extraction and determination of bio-actives that has uses in dietary applications and thus offering alternative to organic solvents.

CPE will be a suitable alternative to the conventional extraction techniques (Solvent extraction, ultrasound assisted extraction, microwave assisted extraction, etc.)

Non-ionic surfactants will be classified as either relatively nontoxic, environment friendly or harmless reagents.

Project Title: “Green approach towards the synthesis of conductive paint from biomass”	
Guide Name: Dr. Surajit Some	Student Name: Madhuri Bhakare
Department	Dyestuff Technology
Project Abstract:	

Biomass is the great and cheap source for the synthesis of graphene. Graphene is known as a wonder material in scientific community because of its property and uses. Graphene has various applications ranging from biological to building materials. Graphene is used as a drug carrier, building material, catalyst, supercapacitor, desalination, flame retardant etc. Synthesis of graphene is rather a tedious process and involves expensive starting materials. The yield after the reaction is also very less so it's a need of a time to yield more graphene which can be used in many fields. Biomass is the great area where anyone can seek for the things they wanted. It's a cheap alternative for synthesis of graphene. Populus wood mass, as a precursor, was first carbonized under the nitrogen atmosphere to obtain carbon and by again by chemical activation it turned into the graphene. Dead camphor leaves are also thermally reduced to create few layers of graphene. Mango peel is also used to synthesize a graphene. Such cheap graphene source can be used to synthesize graphene and that can be used for the preparation of the conductive paint.

Project Title:	
Deep Eutectic solvent as “Greener media” for oxidation reaction.	
Guide Name:	Student Name:
Prof. (Dr.). G. S. Shankarling	Rupali Bhise
Department	Dyestuff Technology

Project Abstract:

Enforcing environmental legislation has generated increasing need for cleaner methods of chemical production, which eventually lead for search of technologies that reduce or, preferably, eliminate the generation of waste and avoid the use of toxic and/or hazardous reagents and solvents. This transition towards greener synthesis has lead to development of media which focuses on economic value to eliminating yield rather than on chemical yield. Ionic liquid emerged as promising media for organic reaction. A number of successful reactions have been reported in ionic liquid such as Diels–Alder, Friedel–Crafts, olefin hydrogenation, hydroformylation, oligomerization and Heck and Suzuki coupling reactions.

Oxidation processes rely upon environmentally damaging oxidants and have poor atom efficiencies. Thus, there is an increasing demand for oxidation processes that are catalytic and use environmentally benign oxidants. Oxidation processes have been performed in ionic liquids such as oxidation of olefins, oxidation of alcohols. However due to moisture sensitivity and non-biodegradable components the use of ionic liquid is questioned. Hence a new class of solvent was developed named as “Eutectic mixture” or “Deep eutectic sovents” in order to differentiate it from ionic liquid. DES is formed by mixing two solid components which form mixtures which are liquid at room temperature. DESs share many characteristics of conventional ILs (e.g. they are nonreactive with water, nonvolatile, and biodegradable), but their low cost makes them particularly desirable (more than conventional ILs) for large-scale synthetic applications. DES of quaternary ammonium salts and hydrogen bond donors like urea, organic acids, glycerol or amides developed by Abbott and coworkers. Till date, the applicability of DES have been explored in areas of biocatalysis, electrodeposition of alloys, ionothermal materials synthesis and as an electrolyte for dyes sensitized solar cells. We have recently reported condensation reaction and halogenation reactions in DES. A variety of other reactions such as N-alkylation, hydrazones formation, N-insertion are under communication. These solvent possesses properties that are comparable to room temperature ionic liquids (RTILs), but are advantageous because they can be easily prepared in high purity, at low cost, and their components are completely biodegradable with no toxicity. Hence the utility of DES in oxidation reaction is proposed.

It has been observed that industrially performed catalytic oxidation reactions often suffer from drawbacks such as poor

conversion and selectivity due to over-oxidation, corrosive reaction media, lack of solvent and catalyst recycling, and negative environmental impact due to evaporation of the solvents. In order to provide a methodology that addresses these problems, DES will be investigated as reaction media. The salient features of these deep eutectic solvents are that they have negligible vapor pressure, provide accelerated reaction rates, and possess enhanced potential for recycling, in addition to their compatibility with a variety of organic compounds. DES is observed to play a dual role of catalyst as well of solvent and can be recycled and reused for without any significant loss of catalytic activity. Hence their potentiality will be tested for oxidation reaction.

Bio- coloration: A promising method of natural coloration of textiles	
Guide Name:	Student Name:
Prof. Dr. R. V. Adivarekar	Akankshya Panda
Department	Fibres & Textile Processing Technology

Project Abstract:

Biosynthesis of the colorants for food, cosmetics and textile application has attracted increased interests in recent years. Nature produces many bio-colorants from various resources including plants, animals, and microorganism.

A great variety of synthetic dyes are used for textile dyeing and other industrial applications. During textile processing, inefficiencies in dyeing results in about 2 to 50% of the applied material being lost to the wastewaters. Most of these compounds are also highly resistant to microbial attack, and thereby they are hardly removed from the effluent by conventional wastewater treatments. Majority of the synthetic dyes in commercial use are azo dyes which can produce carcinogenic and mutagenic aromatic amines on undergoing a reductive cleavage of the azo linkage under anaerobic degradation and these dyes are banned. There have been numerous efforts in substituting banned dyes by the relatively more safe dyes.

In the developed economies demand for garments made out of natural dyed fabrics are increasing day by day and these consumers are ready to pay for the additional cost, although not necessarily such articles are always costlier than those of synthetically coloured. Thus natural dyed material constitutes a niche market.

The research revolves around obtaining various pigment producing organisms through screening of various ecosystems for its microbial biodiversity that are capable of elaborating various pigments. The use of agricultural waste as media for growth of the isolates has been focussed. Characterization of microbial colourants and its analogy to the existing synthetic /natural dyes to compare their viability is the major area of focus. The produced pigment will then be applied on the substrate to check their end use.

“Process development and method intensification of Fluazinam”	
Guide Name:	Student Name:

Professor.Dr. Vikas .N. Telvekar	Yatin Gadkari
Department	Pharmaceutical Sciences and Technology

Project Abstract:

Because of protectant Fungicidal nature, Fluazinam is an excellent active ingredient of pesticides and highly useful in the agrochemical industry. It acts by inhibiting the germination of spores and the development of infection structures. It is an extremely potent uncoupler of oxidative phosphorylation in mitochondria and also having high reactivity with thiols. It's a need to synthesize it efficiently in a proper form with simple operations at low cost in an environmentally friendly manner. So, this project entitled "Process development and method intensification of Fluazinam" involves the synthesis of Fluazinam through intermediate for agrochemical usage.

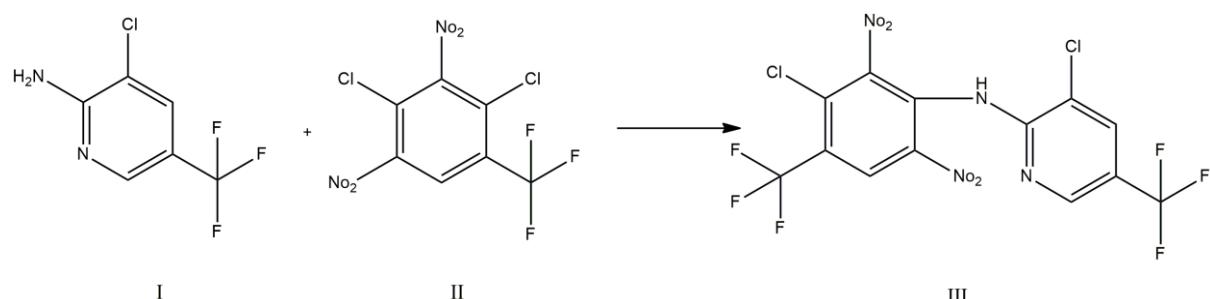

Figure 1. Scheme for Synthesis of Fluazinam

I - 2-amino-3-chloro-5-trifluoromethylpyridine,

II - 2,4-dichloro-3,5-dinitro-trifluorotoluene,

III- Fluazinam

The method comprises the following steps: performing a reaction on 2-amino-3chloro-5-trifluoromethyl pyridine and 2,4- dichloro -3,5- dinitrobenzotrifluoride in the presence of an organic solvent, an alkali and a catalyst at a specified reaction temperature to obtain the desired product

Initially, we screened and designed schemes for the synthesis of 2-amino-3-chloro-5-trifluoromethylpyridine and 2,4- dichloro-3,5-dinitro-trifluorotoluene which are required intermediates for the synthesis of Fluazinam. The formation of the intermediates is confirmed by Mass Spectroscopy and NMR spectroscopy. The characterisation, optimization and scale-up of the reaction intermediates are ongoing simultaneously.

Our interest is not only synthesizing fluazinam, efficiently in a proper form with simple operations but also recycling of alkali, catalyst and solvent so that generation of waste can be reduced with commercial significance.

Project Title: "Greener way of Production of High-Performance Colorants- Xanthene and Quinonoids."

Department	Dyestuff Technology
Project Abstract:	
Production of high-performance colorants from xanthene class (fluorescent dyes) and quinonoid class (pigments) involve reactions catalysed by Aluminium Chloride wherein Aluminium Chloride is used in larger amounts (in mole ration) and at higher temperatures. In place of Aluminium Chloride greener reagents and milder conditions will be used.	

Project Title: Synthesis of Metal and Metal oxide nanomaterials and its application in catalysis.	
Guide Name: Prof. Bhalchandra M. Bhanage	Student Name: Shilpa Prabhakar Gowalkar
Department	Chemistry
Project Abstract:	
The most significant and challenging part of catalyst development is the development of a green method in the aspect of optimization of energy needs and the use of non-conventional energy sources. Conventional synthesis of metal and metal oxide nanomaterials requires a large number of resources and energy. Most of the conventional techniques used for the synthesis of nanomaterials include the high-temperature chemical reduction reaction, laser ablation, ion implantation, chemical vapor deposition, and photolithography. The use of conventional techniques and higher energy requirements have resulted in the high cost of nanomaterials. The use of non-conventional, green and easily available energy sources like solar energy for heating and photo-induced formation of nanomaterials is recognized as important enabling technologies in synthesis. The project aims to develop a cost-effective and greener protocol for nanomaterials preparation and its application as a catalyst. In parallel, it will enable the conversion of low-value chemical feedstock, lignocellulosic biomass, or industrial waste to valuable chemicals.	

Project Title: Synergistic strategy for phycoremediation of hypersaline saline and municipal liquid waste (MLW) water along with macroalgal biomass cultivation	
Guide Name: Dr. Reena Pandit	Student Name: Gayatri K. Pillai
Department	DBT-ICT Centre for Energy Biosciences
Project Abstract:	

According to the UN-Water report 2019, over 80 % of all wastewater returns to the environment without being treated leading to health hazards and environmental pollution. A humongous volume of wastewater discharged into the marine environment adversely affects the marine flora and fauna adding up to the ever-increasing marine pollution

Also, rapid industrial development and population growth globally have led to a large and growing need for freshwater. This demand for freshwater has led to a steep rise in desalination plants, which consequently has threatened the marine ecosystem with its hypersaline brine effluent. Many desalination facilities have adopted strategies of codischarging the hypersaline brine with untreated or partially treated wastewater to meet the ocean's salinity. But this method is far from a holistic approach. The conventional remediation techniques lack the potential for remediation of this mixed effluent. An alternative method to these conventional method is being researched widely.

Keeping these scenarios in check the present study envisages designing an efficient method using marine macroalgae. Wastewater remediation by macroalgae has an added economic advantage as the biomass generated can be used to produce a plethora of commodity chemicals and energy molecules. For this purpose, in the present study, *Ulva lactuca* and *Enteromorpha prolifera* species were grown in salinity amended water (SAW) which was prepared by mixing hypersaline brine and municipal liquid waste (MLW). The macroalgae was adapted to the SAW and a DGR of 15% was achieved. The nutrient removal rate (mg g⁻¹ DW L⁻¹ d⁻¹), removal efficiency (% d⁻¹) and total nutrient removed (%) was evaluated to examine the bioremediation potential of these macroalgae. The total nutrient removal rates obtained in the present study using the macroalgae holds promise in using them for bioremediation. Thus, a synergistic approach of bioremediating hypersaline brine and municipal waste liquid along with the production of algal biomass for valorization is being put forward through this study.

Project Title:	Production of sugar fatty acid esters by biocatalyzed continuous processes.			
Guide Name:	Student Name:			
Dr. Annamma A. Odaneth	Tejal Mule			
Department	DBT-ICT Centre for Energy Biosciences			
Project Abstract:				
<p>Sustainable process development implies an effective use of renewable and non-renewable natural resources. The existing process employ non-renewable resources, whose depletion is inevitable. Exhaustion of these resources has enforced the search for renewable alternatives. Natural renewable energy is therefore explored as potential substitutes to overcome the existing crises in a sustainable and eco-friendly manner. In this regard, use of waste materials for production of sugar fatty acid esters (SFAEs), an important detergent was evaluated from cardboard wastes which is a major source of cellulosic biomass. The production of SFAEs involves three aspects a) Enzyme production for the catalysis b) Production of sugars c) Catalysis of the sugars and fatty acids. The first aspect was accomplished by production of β-glucosidase utilizing cardboard waste as substrate by fungal fermentation for catalysis. The second aspect of sugar production from the cardboard waste is being worked. Different pre-treatment parameters and commercial enzymes have been evaluated to improve enzymatic hydrolysis of cardboard waste for obtaining high sugar yield. So far, the maximum biomass hydrolysis of above 50% has been achieved. Still, further optimization of process conditions is required for further improvement in the sugar yield. Later, in the third aspect the concentrated sugars will be utilized for the synthesis of sugar fatty acid esters (SFAEs).</p>				

Project Title: Develop a viable process for preparation protein isolates from indigenous oil seeds for food applications and surfactant synthesis	
Guide Name: Dr. Jyotsna Waghmare	Student Name: Rakhi Patil
Department	Oils Oleo-Chemicals and Surfactants Technolgy
Project Abstract:	
<p>Oilseeds are sources of energy and nutrition. The main product of oilseeds is oil which finds uses as food fat and also as industrial raw material for development of various oleochemicals. After extraction of oil from seed or fruit we obtain the meal/cake as the waste, but in the waste greatest value lays. The commercial oil cake produced during expeller pressing of oil seed, contains desirable byproduct. In defatted oil cake protein, starch, fat, crude fiber and ash are the prominent components. Upward trending world population and increasing costs for traditional food proteins provide many incentives for utilization of oilseed proteins directly in human diets. The utilization of oilseeds and their cakes for edible purposes gets limited, due to the presence of ant nutritional constituents like phytates, oxalates and mycotoxins. There is need for upgrading the cakes for further incorporation into foods and food products.</p> <p>Cottonseed production in India is 150 lakh tones, oil content is cottonseed is about 18% and protein content in cottonseed meal is about 40-42 % but meal contains coloring phenolic pigments which are harmful for humans and ruminant animals. The non-availability of suitable process limits the use of such an important and valuable commodity. Hence Project will be concentrated on removal of gossypol from cottonseed meal, protein extraction and concentration and application in various food products and surfactant synthesis.</p>	

Project Title: “Green Oleochemicals Based on Guerbet/Branched fatty materials”	
Guide Name: Prof. Amit P. Pratap	Student Name: Deepak Sonawane
Department	Oils Oleo-Chemicals and Surfactants Technolgy
Project Abstract:	
<p>Guerbet alcohols have been known for many years as branched chain fatty materials. This Guerbet/ branched chemistry has made possible the synthesis of a regiospecific, beta-branched hydrophobe which introduces high-purity branching into the molecule. Reaction is related to the Aldol Reaction and occurs at high temperatures under catalytic conditions. Many catalysts have been described in the literature as effective for the preparation of Guerbet Alcohols. These include, nickel, lead salts, oxides of copper, lead, zinc, chromium, molybdenum, tungsten, manganese,palladium compounds and silver compounds .There are advantages and limitations for each type. The Cannizzaro Reaction is a major side reaction and is described as the disproportionation of two molecules of an aldehyde brought about by the action of sodium or potassium hydroxide to yield the corresponding alcohol and acid. One of the major challenge is to over come this hurdles and optimaize the process to derive maximum yield. This study intended to develop a process that utilizes</p>	

the fatty materials obtained from vegetable oils as potential green alternatives against the petrochemicals. Furthermore the products are intended to be biodegradable and environment friendly.

Project Title: Improved green synthesis of Polyglycerol Polyricinoleate (PGPR)	
Guide Name: Dr. Annamma. A. Odaneth	Student Name: Darren Jacob Ennackal
Department	DBT-ICT Centre for Energy Biosciences
Project Abstract:	
Polyglycerol polyricinoleate (E-476, "PGPR") is a food additive and viscosity modifier used to keep emulsions of oil and high water content system stable such as 80%. In the chocolate industry, PGPR is exploited to reduce the yield stress in the molten chocolate. An enzymatic method for the biocatalytic production of PGPR is being researched widely on account of the disadvantages in chemical synthesis. Benefits of biosynthesis include mild reaction conditions of temperature and pressure, neutral pH and in a solvent-free system, which makes the process environmentally friendly. The current work aims at developing a process for the synthesis of PGPR and its equivalent using a natural (carbohydrate) polyol. The synthesis of polyglycerol is well-established through chemical methods. Finding a replacement for the polyol with similar characteristics will allow the process to be green and environmentally sustainable. The project, therefore, consists of two steps a. Isolation of seaweed polymer (polyol); b. Enzymatic polymerization of ricinoleic acid; and c. Cross-linking of PRA and polyols (glycerol & seaweed polysaccharide). In this study, we have successfully isolated ulvan from seaweed and established the concentration vs viscosity profiles. Studies for the polymerization of ricinoleic acid using immobilized lipases in a solvent-free environment have also been carried out. CalB preparation of lipases yielded the highest degree of polymerization (DOP) of RA with a drop in acid value (AV) of 137 with CALB and was chosen for further work. The next steps are aimed at linking glycerol and Ulvan through reported methods and testing the viscosity of the two. The final PGPR and its alternative product (ulvan-PR) will be characterized as a single molecule for its functional properties and use as an environmentally friendly and food grade emulsifier in the food industries.	

Project Title: Photocatalytic degradation of dyes for effluent treatment	
Guide Name: Dr Archana Kalekar	Student Name: Oshnik Chandrakant Maurya
Department	Physics
Project Abstract:	
The textile processing industry is one of the most polluting industries. It uses large volumes of water; on an average over 100 litres per Kg of fabric processed. The industrial effluent is discharged in natural water resources thus polluting these resources. Many areas in India are facing severe problems due to polluted ground water. In fact, some of process	

houses have been ordered by the Hon'ble High court to shut down and pollution control boards insist on zero liquid discharge which is very expensive and yet may not be an ideal solution. Therefore, it is necessary that effluent is properly treated, and dye molecules are removed from it before it is discharged in natural water reservoirs. Currently, photocatalytic material such as TiO₂, WO₃, ZnO, CuO, Fe₂O₃ etc. are used to degrade /split dye molecules present in the effluent. Nano particles of these materials are found to be more effective in treating effluent due to large surface to volume ratio. However, recovery of nano particles is a great challenge. The degradation of dye molecule is achieved in presence of photons. When photocatalytic material is exposed to the radiation of suitable energy, electron-hole pair is generated and is responsible for degradation / splitting of dye molecules. However, the probability of recombination of electrons and holes will decide the efficiency of this technique. Before they get recombine, if they interact with dye molecules then the degradation / splitting of dye molecule is possible. Hence it is more important that they do not recombine fast or this recombination rate is delayed substantially. Secondly tailoring the bandgap of the above-mentioned materials is crucial. By using suitable dopants, the band gap will be adjusted in such a way that the material absorb energy from the visible spectrum of solar radiation effectively. In the present project, TiO₂ and WO₃ thin films will be deposited using spray pyrolysis on transparent conducting glass plates, which acts as electrode. The bandgap of TiO₂ and WO₃ will be tailored using suitable dopant. Since photocatalytic material is deposited and strongly adhering to the substrate glass plate electrode, the loss of material by erosion will be negligible and hence there is no question of recovery of the material unlike nano particles. However, the deposited film will have nano structure, which will facilitate and speed up dye degradation. Further, to delay electron-hole pair recombination, very small voltage around 1.5 V will be applied between the two electrodes. This voltage will be generated by photo-voltaic mechanism in presence of solar radiation. Thus, solar radiation will be used to induce catalytic activity and to maintain potential difference between the two electrodes. Therefore, this process is environment friendly and will enhance rate of degradation / splitting of dye molecules in the effluent.

Formulating UV Curable Resin for SLA 3D printing and other general application	

Guide Name:	Student Name:
Prof. Dr. .R. N. Jagtap	Prashil Desai
Department	Polymer & Surface Engineering and Technology
Project Abstract:	
Origin of the proposal, definition of the problem and the objectives	
<p>Traditional way of creating the object is from the solid block using grilling, milling, turning and drilling. Throughout the years this technology has evolved and was replaced by electric machining controlled by software and robotics, however it still consists of many troubleshooting and limitations. The constraints of using this technology are time and labor intensive, assembling and fixing which often leads to high product cost. In the recent years it can be seen that huge interest has been exhibited in the technology of “Rapid Prototyping” or “Additive Manufacturing” or in simple terms 3D Printing Technology. Additive manufacturing is a method where object is digitally designed using CAD software and is built up by horizontal layer deposition process. The digital file of the object is split into many horizontal cross-sections and thus preceded for final printing. Immense research and investments are being made to develop the technology at a commercial scale, along with that the limitations of this technology have been brought down to minimal. Traditional manufacturing follows step by step progression where designing, process planning and manufacturing are done successively, whereas in additive manufacturing all these steps are done simultaneously which enhances the overall manufacture quality and efficiency. Throughout the years many technologies have been developed in the field of rapid prototyping, which works on the same principle of horizontal layer deposition but only differs in printing techniques. Some of the well-established technologies are Fused deposition modeling (FDM), Selective layer sintering (SLS), Laminated object manufacturing (LOM), Digital light projection (DLP), Stereolithography (SLA). Additive manufacturing by Stereolithography is found to be the fastest and gives best resolution among other printing technologies. The resolution of prototype mainly depends on factors like additive manufacturing technology, materials for printing, overall accuracy of the system and post processing requirements. The cutting-edge UV laser curing technology use in this system enhances the print resolution to utmost level giving prototype well finished surface, unlike unusual horizontal cross-section observed in the other additive manufacturing techniques. The fine control on the UV laser guided system builds up the 3D Print with good precision from the source digital file use to design the prototype. The photocuring resin use as the printing material in SLA technology is found to be the best choice among other materials like PLA, ABS, photosensitive powder, etc. which are used in other additive manufacturing techniques. The availability of wide selection of resins in SLA also helps in crafting prototypes with different physical and mechanical properties, whereas using other printing materials only handful properties can be achieved. Prototype with high complexity and rapidity can be designed using SLA as compared to other additive manufacturing techniques. Incorporation of nanocomposites in photocurable resins has also gained a major research interest. Dispersing nanocomposites such as ceramics, metals, glass etc. improves the overall structure and property of the prototype giving its surface same as ceramics or metal objects.</p>	

Project Title:	
Development of Subcutaneous Implant	
Guide Name:	Student Name:
Dr. Purnima D. Amin	Sunny B. Wankhade
Department	Pharmaceutical Sciences and Technology

Project Abstract:

Chronic pain management by conventional drug therapy is difficult and requires high patient compliance. In animals the situation worsens further. Use of subcutaneous implants can be a boon for patients. Thus analgesic implants can be used for chronic pain management. This would reduce the dose frequency. Depending upon the dose to be administered implants can be either injectable or surgical. Also multiple implants can be administered to maintain the minimum effective dose level.

Selection of drug and polymer becomes crucial for the desired therapeutic effect. Drug with high half-life must be used to attain the desired therapeutic effect. The release of drug from the polymer is also important as it would determine bioavailability of the implant.

Implantable drug delivery system requires large doses of drugs administered by systemic routes. Some of the disadvantages of prolonged parenteral therapy include; Patient discomfort, high cost of treatment, development of systemic toxicity, patient compliance problems.

Hot Melt Extrusion :

Hot Melt Extrusion (HME) technique is a promising technology for manufacturing of implants. It involves application of heat, pressure and agitation through an extrusion channel to mix materials together, and then forcing them out through a die. It blends materials while imparting high shear to break-up particles and disperse them.

It offers several advantages of manufacturing:

- Continuous process
- High throughput
- Solvent-free technique
- Increases solubility and bioavailability of poorly water-soluble drugs
- No downstream processing required
- Useful for low compressibility index Active Pharmaceutical Ingredients (API)
- Exposure to oxygen in extrusion channel is limited

HME has emerged as an alternative to conventional manufacturing process due to its enhanced bioavailability.

Chronic pain management in animals is very difficult due to low compliance. Administering subcutaneous implants would reduce dose frequency and give the desired therapeutic effect for 1-3 months. The subcutaneous tissue is an ideal location for implantation and prolonged drug administration because of its access to implantation and slow drug absorption.

Project Abstract:

Polyethylene glycols H(OCH₂CH₂)OH constitute a class of compounds of growing importance in field of Medicine, Cosmetics and Organic Chemistry. Several synthetic routes for its synthesis has been reported which includes variable number of steps or use of hazardous chemicals. During the course of our work, we needed polyethylene glycols with a well-defined number of ethylene oxide units(n=4). Using Williamson's ether synthesis, we are trying to synthesize glycols using less steps and environmentally friendly chemicals so that it would be beneficial for the industrial purpose.

Greener approach to process intensification via membrane nanofiltration and/or reverse osmosis in the manufacture of selected haematinics

**Guide Name:**

Prof. Anand V. Patwardhan

Student Name:

Department

Chemical Engineering

Project Abstract:

A haematinic is a nutrient required for the formation of blood cells in the process of haematopoiesis. The main haematinics are iron, B12, and folate. Deficiency in haematinics can lead to anaemia. In cases of haematinic deficiency, haematinics can be administered as medicines, to increase the haemoglobin content of the blood. Iron is required in biosynthesis of heme and heme-containing proteins. Various iron salts listed above like iron sucrose, iron polymaltose, iron sorbitol, find application as haematinics. Iron sucrose is used in treating iron deficiency anaemia in patients undergoing chronic haemodialysis. It replenishes body iron in patients. Iron polymaltose a well-established active pharmaceutical/nutrition raw material or bulk drug used as haematinic drug or in iron deficiency anaemia or as nutritional supplement. Iron sorbitol in elemental iron is used as an injection. This medicine is used to treat anaemia in people, who are unable to take oral forms of iron. Manufacture of above salts has been done traditionally by batch process with variations in quality parameters. These products are high volume and low priced and are proposed to be manufactured by flow chemistry (continuous process) followed by membrane nanofiltration and/or reverse osmosis (concentration of dilute salt solution in continuous mode). The two successive process intensification steps should help for life cycle management of this class of APIs.

Chemical Engineering

Project Abstract:

P-anisaldehyde is an important chemical and chemical intermediate having huge demand in the market because of extensive applications in pharmaceuticals, perfumery and agrochemical industries. It is also used in soap additives, food additives, electroplating. Process for the production of p-anisaldehyde can be categorized as vapor Phase Oxidation, liquid phase oxidation and electrochemical oxidation. Although the liquid phase oxidation of hydrocarbons has been the subject of numerous studies, the reaction mechanism is not simple and there is still no unified view in terms of the control of the catalytic activity and selectivity to oxidize specific substrates. Research is related with the development of a process and optimizing reaction parameters so as to obtain the maximum amount of selectivity for aldehydes along with the minimum amount of by product generation. Study also includes scaling up the oxidation process and developing its technology in order to achieve maximum industrial economic feasibility.

Keywords- Oxidation, p-anisaldehyde, selectivity
