

**INSTITUTE OF CHEMICAL TECHNOLOGY**  
(Deemed to be University under section 3 of the UGC Act 1956)

**PHARMACEUTICAL SCIENCES AND TECHNOLOGY**

**Syllabus Structure for the B.Tech Pharma First year**

**Semester I**

No.	Subjects	Hours/week (L + T)	Marks	Credits
CHT 1121	Inorganic Chemistry	2+1	50	3
CHT 1131	Organic Chemistry-I	3+1	100	4
MAT 1101	Applied Mathematics-I	2+2	100	4
PYT 1101	Applied Physics-I	3+1	100	4
	<b>TOTAL</b>	<b>15</b>	<b>350</b>	<b>15</b>
GEP 1101	Engineering Graphics-I	8	100	4
PYP 1102	Physics Laboratory	4	50	2
CHP 1122	Inorganic Chemistry Laboratory	4	50	2
CHP 1132	Organic Chemistry Laboratory	4	50	2
	<b>Total Practicals</b>	<b>20</b>	<b>250</b>	<b>10</b>
		<b>35</b>	<b>600</b>	<b>25</b>

**Semester II**

No.	Subjects	Hours/week (L + T)	Marks	Credits
CHT 1231	Organic Chemistry-II	3+1	100	4
CHT 1211	Analytical Chemistry	2+1	50	3
CET 1501	Material & Energy Balance Calculations	2+2	100	4
MAT 1102	Applied Mathematics-II	2+2	100	4
PYT 1103	Applied Physics-II	2+1	50	3
	<b>TOTAL</b>	<b>18</b>	<b>400</b>	<b>18</b>
MAP 1201	Engineering Applications of Computers	4	50	2
CHP 1232	Organic Chemistry Laboratory	4	50	2
CHP 1222	Analytical Chemistry Laboratory	4	50	2
HUP 1101	Communication Skills	4	50	2
	<b>Total Practicals</b>	<b>16</b>	<b>200</b>	<b>8</b>
		<b>34</b>	<b>600</b>	<b>26</b>

## Syllabus Structure for the B.Tech Pharma Second year

### Semester III

Course code	Subjects	Hours/week (L + T)	Marks	Credits
GET1104	Engineering Mechanics and Strength of Materials	2+1	50	3
GET1105	Electrical and Electronics Engineering*	2+1	50	3
CHT1341	Physical Chemistry	3+1	100	4
PHT1021	Spl 1: -General Aspects of Pharmaceuticals and Physiopharmacology - I	3+1	100	4
BST1101	Spl 2: General Microbiology	2+1	50	3
BST1103	Spl 3: Biochemistry	2 +1	50	3
	<b>TOTAL</b>	<b>20</b>	<b>400</b>	<b>20</b>
GEP1106	Electrical and Electronics Engineering Laboratory	4	50	2
CHP1342	Physical Chemistry Laboratory	4	50	2
PHP1021	Pr1: -Physiopharmacology Laboratory	4	50	2
	<b>Total Practicals</b>	<b>12</b>	<b>150</b>	<b>6</b>
		<b>32</b>	<b>550</b>	<b>26</b>

### Semester IV

Course code	Subjects	Hours/week (L + T)	Marks	Credits
CET1105	Transport Phenomena	3+1	100	4
PHT1041	Spl 4: - Medicinal Chemistry-I	3+1	100	4
PHT1051	Spl 5: -Chemistry of Natural Products	3+1	100	4
PHT1022	Spl 6: -Physiopharmacology - II	2+1	50	3
PHT1052	Spl 7: -Medicinal Natural Products	2+1	50	3
	<b>TOTAL</b>	<b>18</b>	<b>400</b>	<b>18</b>
PHP1052	Pr 2: -Medicinal Natural Products Laboratory	4	50	2
PHP1071	Pr 3: Biochemistry Laboratory	4	50	2
PHP1072	Pr 4: Microbiology Laboratory	4	50	2
	<b>Total Practicals</b>	<b>12</b>	<b>150</b>	<b>6</b>
		<b>30</b>	<b>550</b>	<b>24</b>

## Syllabus Structure for the B.Tech Pharma Third year

### Semester V

No.	Subjects	Hours/week (L + T)	Marks	Credits
GET1104	Chemical Engineering Operations	2+1	50	3
GET1104	Chemical Reaction Engineering	2+1	50	3
PHT1042	Spl 8 -Pharmaceutical Chemistry	2+1	50	3
PHT1061	Spl 9: -Pharmaceutical Biotechnology	2+1	50	3
PHT1031	Spl 10: -Pharmaceutical Analysis	2+1	50	3
PHT1011	Spl 11: -Technology of Liquids and Topicals	2+1	50	3
	<b>TOTAL</b>	<b>18</b>	<b>300</b>	<b>18</b>
PHP1011	Pr 5: -Technology of Liquid and Topicals	8	100	4
PHP1031	Pr 6: -Pharmaceutical Analysis	4	50	2
PHP1061	Pr 7: -Biotechnology Laboratory	4	50	2
	<b>Total Practicals</b>	<b>16</b>	<b>200</b>	<b>8</b>
		<b>34</b>	<b>500</b>	<b>26</b>

### Semester VI

No.	Subjects	Hours/week (L + T)	Marks	Credits
CHT1341	Instrumentation	2+1	50	3
PHT1043	Spl 12: -Medicinal Chemistry-II	3+1	100	4
PHT1044	Spl 13: -Drug Discovery Process and Drug Design	2+1	50	3
PHT1012	Spl 14: -Technology of Solid Dosage Forms	2+1	50	3
PHT1045	Spl 15: -Catalysis and Catalytic Processes	2+1	50	3
PHT1062	Elective-I : Recombinant DNA Technology	2+1	50	3
	<b>TOTAL</b>	<b>19</b>	<b>350</b>	<b>19</b>
CHP1342	Chemical Engineering Laboratory	4	50	2
PHP1042	Pr 8: -Pharmaceutical Chemistry Laboratory	8	100	4
PHP1012	Pr 9: -Solid Dosage Forms Laboratory	4	50	2
	<b>Total</b>	<b>16</b>	<b>200</b>	<b>8</b>
		<b>35</b>	<b>550</b>	<b>27</b>

## Syllabus Structure for the B.Tech Pharma Final year

**In-Plant Training: 50 marks/2 credits**

### Semester VII

No.	Subjects	Hours/week (L + T)	Marks	Credits
1	Project Economics	2+1	50	3
2	Industrial Psychology and Human Resource Management	2+1	50	3
PHT1046	Spl 16: -Process Technology Drug and Intermediats	2+1	50	3
PHT1013	Spl 17: -Validation and Regulatory Requirements	2+1	50	3
PHT1014	Spl 18: -Technology of Sterile Products	2+1	50	3
PHT1047	Elective II:– Structural Analysis by Spectroscopy	2+1	50	3
	<b>TOTAL</b>	<b>18</b>	<b>300</b>	<b>18</b>
PHP1046	Pr 10: -Process Technology Laboratory	8	100	4
PHP1014	Pr 11: -Sterile Products Laboratory	4	50	2
PHP1071	Seminar	4	50	2
	<b>Total Practicals</b>	<b>16</b>	<b>200</b>	<b>8</b>
		<b>34</b>	<b>500</b>	<b>26</b>

### Semester VIII

No.	Subjects	Hours/week (L + T)	Marks	Credits
1	Industrial Management	2+1	50	3
2	Value Education	2+1	50	3
3	Design and Analysis of Experiments	2+1	50	3
PHT1015	Spl 19: -Drug Delivery Systems	2+1	50	3
PHT1016	Spl 20: -Nanoscience and Technology	2 +1	50	3
PHT1017	Elective III:– Pharmaceutical Packaging Technology	2+1	50	3
	<b>TOTAL</b>	<b>18</b>	<b>300</b>	<b>18</b>
PHP1016	Green Chemistry Laboratory	4	50	2
PHP1072	Experimental Project	12	150	6
	<b>Total</b>	<b>16</b>	<b>200</b>	<b>8</b>
		<b>34</b>	<b>500</b>	<b>26</b>

**Total credits of all semesters = 25 (Sem I) + 26 (Sem II) + 26(Sem III) + 24 (Sem IV)  
+ 26 (Sem V) + 27 (Sem VI) + 2 (IPT) + 26 (Sem VII) + 26 (Sem VIII) = 208**

**Total Marks: 600 (Sem I) + 600 (Sem II) + 550 (Sem III) + 550 (Sem IV) + 500 (Sem V)  
+ 550 (Sem VI) + 50 (IPT) + 500 (Sem VII) + 500 (Sem VIII) = 4400**

## Detailed Syllabus for First Year B. Tech (Pharma)

### Semester I

Sr. No.	Topic	Hrs
<b>1.</b>	<b>CHT 1121 – Inorganic Chemistry (50 marks) 3hr./week</b>	
	Periodic Table, s,p,d and f elements and their general properties, correlations among various properties.	3
	Main group Chemistry: Hydrogen, Chemistry of Group IA, II B and Group IIIB to VIIB elements and noble gases.	12
	Chemical Bonding: Valence Bond theory and Molecular orbital theory	3
	Coordination Chemistry: Nomenclature, Werner theory, VSEPR, crystal field theory, electronic and magnetic properties of the complexes.	12
	Organometallics: Metal Ligand concept, , types of ligands, Effective atomic number rule reactions using organometallic compounds like addition, insertion, migration. Concepts of sigma bond and pi bond formation. Application of organometallic complexes in hydrogenation, hydroformylation, carbonylation etc.	15
	<b>Reference Books</b> <ul style="list-style-type: none"> <li>• Concise Inorganic Chemistry, J.D. Lee, Wiley India Edition</li> <li>• Basic Inorganic Chemistry, F.A. Cotton and G. Wilkinson, John Wiley and Sons</li> </ul>	
<b>2.</b>	<b>CHT 1131 – Organic Chemistry I (100 marks) 4hr./week</b>	
	<b>Nomenclature of organic compounds</b>	5
	<b>Mechanisms of organic reactions:</b> Types of Organic Reaction, Reactive intermediates; their generation, structure, stability and general reactions.	10
	<b>Stereochemistry:</b> Elements of symmetry, stereochemistry of compounds containing one and two carbon atoms. Racemates and their resolution, conformation of cyclic and acyclic systems, E and Z isomers of olefins, Idea of asymmetric synthesis.	10
	<b>Chemistry of alkanes, cycloalkanes, alkenes and alkynes:</b> Alkanes from petroleum, methods of synthesis. Properties, General reactions, oligomerization and polymerization of olefins, acidity of terminal alkynes, alkenes as fuels.	10
	<b>Aromaticity and Aromatic hydrocarbons:</b> Huckel's theory of Aromaticity and monocyclic carbocyclic aromatic species, BTX, Aromatic hydrocarbons. Fridel-Craft alkylation. General reaction of aromatic hydrocarbons.	10
	<b>Aliphatic and aromatic halides:</b> Methods of preparation, properties, General reactions, SN <sup>1</sup> ,SN <sup>2</sup> reactions, Aromatic nucleophilic reactions.	15

	<b>Reference Books:</b> <ul style="list-style-type: none"> <li>Organic Chemistry, J. McMurry, Brooks/Cole</li> <li>Organic Chemistry, T.W.G. Solomons, C.B. Fryhle, John Wiley and Sons Inc.,</li> <li>Organic Chemistry, L.G. Wade Jr, Pearson Education</li> <li>StereoChemistry of Carbon compounds, E.L. Eliel, Mcgraw-Hill</li> <li>Organic Chemistry, Paula Y. Bruice, Pearson Education</li> </ul>	
<b>3.</b>	<b>MAT 1101 Applied Mathematics I (100 marks) 4hr./week</b>	
	Rank of matrices, Solutions of system of linear equations (Gauss-elimination, LU-decomposition etc.) Eigenvalues and Eigenvectors, Caley-Hamilton theorem:	6
	Numerical methods for solution of linear and non-linear single and multiple algebraic equations. Solution of transcendental Equations, Newton's method, Fixed point iterative method etc.	6
	Interpolation and extrapolation: interpolating polynomials for equal and non-equal spaced data (Forward, backward, central and spline) their applications to numerical integration (trapezoidal rule, Simpson's Rule, Romberg Integration etc.) and numerical differentiations.	10
	<b>Probability of Statistics:</b> Review of elementary probability theory, Random variables, Functions of random variables, probability distribution functions, expectation, moments and moment generating functions, Joint probability distributions, binomial, Poisson, and Normal distribution.	12
	Sampling distributions, Point and interval estimations, Statistical hypothesis tests, t-tests for one and two samples, F-test, $\chi^2$ -test, tests of hypothesis for proportion, Simple Applications;	10
	Statistical Methods for Data Fitting: Linear, multi-linear, non-linear regression, ANOVA	6
	Differential Calculus : Review and Concepts, Higher order differentiation and Leibnitz Rule for the derivative, Rolle's and Mean Value theorems, Taylor's and Maclaurin's theorems, Maxima/Minima, convexity of functions, Asymptotes, Radius of curvature;	10
	<b>Reference Books:</b> <ul style="list-style-type: none"> <li>Advanced Engineering Mathematics, Erwin Kreyszig, John-Wiely.</li> <li>Advanced Engineering Mathematics S. R. K. Iyengar, R. K. Jain, Narosa.</li> <li>Introductory Methods Of Numerical Analysis, S. S. Sastry, PHI.</li> <li>A First Course in Probability, Sheldon Ross, Pearson Prentice Hall.</li> </ul>	

	<ul style="list-style-type: none"> <li>Probability and Statistics in Engineering , W.W. Hines, D. C. Montgomery, D.M. Goldsman, John-Wiely</li> </ul>	
<b>4.</b>	<b>PYT 1101 – Applied Physics-I: (100 marks) 4hr./week</b>	
	<b>Thermal Physics</b> Temperature and the zeroeth law of thermodynamics, heat conduction, first law of thermodynamics, kinetic theory of gases, Maxwell-Boltzmann distribution, some aspects of non-ideal behavior, entropy and second law of thermodynamics	12
	<b>Optics</b> Introduction, Diffraction – basic concepts, diffraction at a straight edge, diffraction at single and multiple slits, Resolving power – Rayleigh’s criterion, resolving power of various optical components.	6
	<b>Solid State Physics</b> <b>Crystal Structure</b> Crystal structure of solids, unit cell, space lattices and Bravais lattices, Miller indices, directions and crystallographic planes. Cubic crystals – SCC, BCC, FCC, Hexagonal crystals – HCP, atomic radius, packing fraction, ion-ligancy and critical ratio, Bragg’s law, determination of crystal structure using Bragg spectrometer	6
	<b>Semiconductors</b> Formation of energy bands in solids, concept of Fermi level, classification of solids – conductor, semiconductor and insulator. Intrinsic semiconductor, Effect of doping – extrinsic semiconductors.	4
	<b>Ultrasonics</b> Generation of ultrasound – mechanical, electromechanical transducers, propagation of ultrasound, attenuation, velocity of ultrasound and parameters affecting it, measurement of velocity, cavitation, applications of ultrasound.	8
	<b>Optical Fibers</b> Introduction, optical fiber as a dielectric waveguide – total internal reflection, numerical aperture and various fiber parameters, losses associated with optical fibres, step index and graded index fibers, applications of optical fibers.	6
	<b>Lasers and Microwaves</b> Introduction to interaction of radiation with matter, principles and working of a Laser– population inversion, pumping, various modes, threshold population inversion, types of Lasers – solid state, semiconductor, gas, applications of Lasers. Microwaves – production and applications.	6

	<p><b>Reference Books:</b></p> <ul style="list-style-type: none"> <li>• Physics: Vols. I and II – D. Halliday and R. Resnick, 2<sup>nd</sup> ed, 1962, Wiley Eastern.</li> <li>• Lectures on Physics: Vols. I, II and III – R. P. Feynman, R. B. Leighton and M. Sands, 1963, Narosa.</li> <li>• Concepts of Modern Physics – A. Beiser, 1969, McGraw-Hill.</li> <li>• Introduction to Modern Optics – G. R. Fowles, 2<sup>nd</sup> ed, 1975, Dover Publications.</li> <li>• A Course of Experiments with LASERs – R. S. Sirohi, 2<sup>nd</sup> ed, 1991, Wiley Eastern.</li> <li>• Optical Fibre Communication – G. Keiser, 3<sup>rd</sup> ed, 2000, McGraw-Hill.</li> <li>• Optoelectronics – J. Wilson and J. F. B. Hawkes, 2<sup>nd</sup> ed, 1992, Prentice-Hall India.</li> <li>• Ultrasonics: Methods and Applications – J. Blitz, 1971, Butterworth.</li> <li>• Applied Sonochemistry – T. J. Mason and J. P. Lorimer, 2002, Wiley VCH.</li> <li>• Solid State Physics – A. J. Dekker, 1957, MacMillan India.</li> </ul>	
<b>5.</b>	<b>GEP 1101 – Engineering Graphics – I (100 marks) 4hr./week</b>	
	Solid geometry projections of solids like prism, pyramids, cylinders and cones. Sections of solids. Developments of solids. Interpenetration of simple solids including cone and cylinder. Isometric scales and projections.	
	Machine drawing-Orthographic projections, First Angle and Third Angle method of projections. Conventions in dimensioning and in sections. Forms and proportions of screw threads, bolts, nuts, locking devices for nuts, studs, set-screws, hangers and brackets. Free hand sketches of the above parts	
<b>6.</b>	<b>PYP 1102 – Physics Laboratory (50 marks) 3hr./week</b>	
	Students will perform eight to ten experiments from selected topics in modern physics, heat and fluid mechanics	
<b>7.</b>	<b>CHP 1122 – Inorganic Chemistry Laboratory (50 marks) 3hr./week</b>	
	Volumetric Analysis: Preparation and Standardisation of Volumetric solutions. Acid base reactions, titrations of a mixture of (a) hydrochloric and acetic acid (b)Sulfuric and phosphoric acid (c) carbonate and bicarbonate. Oxidation - reduction titrations involving permanganate, dichromate, ceric sulfate, iodine (tri-iodide) potassium bromate. Precipitation titration: Mohrs and Volhards titrations.	

	Compleximetric titrations involving EDTA: Determination of hardness of water. Determination of Manganese in pyrolusite. Gravimetric analysis: Gravimetric determination of Fe, Ni, $\text{SO}_4^{2-}$ and Cl. Analysis of a Fe-Ni alloy. Suitable number of experiments from the above list will be performed.	
<b>8.</b>	<b>CHP 1132 – Organic Chemistry Laboratory I (50 marks) 3hr./week</b>	
	Identification of an organic compound through elemental analysis, group detection, physical constants (m.p and b.p) and derivatisation.	
	Estimation of selected organic compounds like: aniline/phenol, formaldehyde/acetone, glucose, glycerol. Neutral equivalents of acids and bases, SAP value of an oil.	

## Semester II

Sr. No.	Topic	Hrs.
<b>1.</b>	<b>CHT 1231 – Organic Chemistry – II (100 marks) 4hr./week</b>	
	<b>Chemistry of Hydroxy derivatives of aliphatic and aromatic compounds:</b> Methods of preparation, Properties, General reaction, Acidity of phenol	10
	<b>Aldehydes and ketones:</b> Methods of preparation. Fridel-Craft acylations and related reactions, properties and reactivity, general reactions	16
	<b>Carboxylic acids and their Derivatives:</b> Carboxylic acids, esters, amides, acid chlorides and anhydrides Methods of preparation, Properties, Acidity of carboxylic acids, General reaction of their compounds. Interconversion.	10
	<b>Amines:</b> Methods of preparation of primary, secondary and tertiary amines, properties, Basicities and general reactions.	7
	<b>Ethers, epoxides and sulphur acids:</b> Methods of preparation, General reaction, Acidity of sulphur acids. EO condensates.	5
	<b>Heterocyclic chemistry:</b> Comparison with carbocyclic compounds, methods of Preparation, Regenerated compounds Pyrrole, Furan, Thiophene, Pyridine, Quinoline and Isoquinoline. Retrosynthetic approach, characteristic properties and Reactions	12
	<b>Reference Books:</b> <ul style="list-style-type: none"> <li>• Organic Chemistry, J. McMurry, Brooks/Cole</li> <li>• Organic Chemistry, T.W.G. Solomons, C.B. Fryhle, John Wiley and Sons Inc.</li> <li>• Organic Chemistry, L.G. Wade Jr, Pearson Education</li> <li>• Organic Chemistry, Paula Y. Bruice, Pearson Education</li> </ul>	
<b>2.</b>	<b>CHT 1211 – Analytical Chemistry (50 marks) 3hr./week</b>	
	Concept of quality: Definition of quality, quality control and assurance, TQM. Correlation between quality and analysis, steps and types of analysis, Stoichiometry and expression of concentration.	2
	Theory of errors: Sources and classification of errors. Statistical treatment of analytical data and presentation of results	2
	Sampling of solids, liquids and gases.	2
	Evaluation and validation of analytical methods	2
	Good laboratory practices.	1
	Fundamentals of chromatography, Chromatography methods: GLC, HPLC, TLC, HPTLC, ion chromatography, hyphenated techniques like GC-MS, LC-MS	6
	Fundamentals of absorption / emission spectroscopy: Absorption of light, UV – VIS spectrophotometry, Beer-Lambert Law, characteristic bond frequencies. Energy levels in atoms and	10

	molecules. Principles of Atomic Absorption Spectroscopy (AAS), its application, feature of the instrument. Principles of IR spectroscopy, application, and features of the instrument	
	Diamagnetism and paramagnetism, nuclear spin, NMR spectroscopy, chemical shift, nuclear spin - spin coupling, EPR spectroscopy, Spectroscopy based on Scattering.	6
	Fundamentals of Imaging Techniques: SEM TEM	4
	Electrochemical instruments, techniques and applications, controlled current and controlled potential principles, amplifiers, potentiostats, galvanostats, cyclic voltametry, chronoamperometry, chronopotentiometry, applications such as corrosion, electroplating, anodising, organic and inorganic electrosynthesis, fuel cells.	8
	Thermal Methods : TGA, DTA, DSC	4
	<b>References:</b> <ul style="list-style-type: none"> <li>• Instrumental methods of Chemical Analysis, E.W. Ewing, McGraw Hill.</li> <li>• Instrumental Methods of Analysis, H.H. Willard, L.L. Merrit, J.A. Dean and F.A. Shette, Jr, CBS Publishers and Distributors, New Delhi.</li> <li>• New Instrumental Methods in Electrochemistry, P.D. Delaha</li> <li>• Instrumental methods of analysis, D.A. Scoog and D.M. Wes</li> <li>• Inorganic quantitative analysis, A.I. Vogel, Longmans ELBS.</li> </ul>	
<b>3.</b>	<b>CET 1501 Material and Energy Balance Computations (100 marks) 4hr./week</b>	
	Introduction to Chemical Engineering: Historical evolution of Chemical Engineering and Chemical Process Industries, Chemistry to Chemical Engineering	4
	Revision of Units and Dimensions., Mathematical techniques, Introduction to use of calculators.	4
	Mole concept, composition relationship and stoichiometry	2
	Applications of Laws of Conservation of Mass and Energy to single and Multistage processes.	6
	Behaviour of gases and vapors	4
	Material balances for reacting systems.	8
	Introduction to psychrometry humidity and air-conditioning calculations.	6
	Calculation of X-Y diagrams based on Raoult's law.	4
	Fuels and combustion	6
	Unsteady state material balances.	4
	Material and energy balances for complete plants.	8
	Material and energy balances using computers.	4
	<b>Reference Books:</b> <ul style="list-style-type: none"> <li>• Chemical Process Principles, Hougen O.A., Watson K. M.</li> </ul>	

	<ul style="list-style-type: none"> <li>• Basic Principles and Calculations in Chemical Engineering, Himmelblau</li> <li>• Stoichiometry, Bhatt B.I. and Vora S.M.</li> </ul>	
<b>4.</b>	<b>MAT 1102 Applied Mathematics II (100 marks) 4hr./week</b>	
	Functions of two or more variables, Limit and continuity, Partial differentiation, Total derivatives, Taylor's theorem for multivariable functions and its application to error calculations, Maxima/Minima, Jacobian.	10
	Integral Calculus : Improper integrals, Beta and Gamma functions, Differentiation under the integral sign, Curve tracing, Application to length, Area, volumes, Surface of revolution, Moment of inertia, Centre of gravity	14
	Differential Equations: Solution of Higher order ODE with constant and variable coefficients and its applications to boundary and initial value problems, Series solution of differential equations, Bessel functions, Legendre Polynomials, Error function, Solution by orthogonal set of functions.	12
	Fourier Series and Fourier integrals, Fourier and Laplace Transforms and their applications to differential equation (both ODEs and PDEs)	14
	Numerical methods for solution of ODEs (initial values and boundary values) using single step methods (RK, Euler's explicit and implicit methods). Multi-Step methods (predictor – corrector methods etc), Solution of Stiff ODEs, Adaptive step size, Shooting method , Solutions of Differential Algebraic Equations	10
	<b>Reference Books:</b> <ul style="list-style-type: none"> <li>• Advanced Engineering Mathematics, Erwin Kreyszig, John-Wiely</li> <li>• Advanced Engineering Mathematics S. R. K. Iyengar, R. K. Jain, Narosa.</li> <li>• Elements of <i>Applied Mathematics</i>. Volume 1, P.N.Wartikar and J.N.Wartikar, Pune Vidyarthi Graha.</li> <li>• Introductory Methods Of Numerical Analysis, S. S. Sastry, PHI.</li> <li>• Numerical Solution of differential Equations, M. K. Jain, Wiley Eastern.</li> </ul>	
<b>5.</b>	<b>PYT 1103 – Applied Physics – II (50 marks) 3hr./week</b>	
	<b>Quantum Mechanics</b> Introduction to quantum physics, blackbody radiation, explanation using the photon concept, photoelectric effect, Compton effect, de Broglie hypothesis, wave-particle duality, verification of matter	12

	waves, uncertainty principle, Schrodinger wave equation, Born's interpretation of the wave function, particle in a box, quantum harmonic oscillator, hydrogen atom (no detailed derivation)	
	<b>Rheology</b> <b>Introduction to rheology</b> Basic concepts in fluid flow, importance of non-linearity, concepts of elasticity in solids and liquids, Hooke's law, Newton's law, scaling of time by means of Deborah number for characterisation of flow behaviour in melts and liquids, constitutive equations relating stress and deformation variables.	6
	<b>Melt Viscosity</b> Concept of viscosity, variation of viscosity with different experimental conditions as shear rate, time of shearing, temperature and pressure, shear dependent viscosity, definition of Newtonian behaviour and Non-Newtonian behaviour, concepts of shear thinning and shear thickening.	6
	<b>Viscoelasticity</b> Introduction to viscoelasticity, Maxwell and Kelvin models, relaxation models, relaxation spectrum, creep and creep recovery, complex modulus and complex viscosity	6
	<b>Reference Books:</b> <ul style="list-style-type: none"> <li>• Perspectives of Modern Physics – A. Beiser, 1969, McGraw-Hill.</li> <li>• Introduction to Rheology – H. A. Barnes, J. F. Hutton and K. Walters, 4<sup>th</sup> ed, 1996, Elsevier Science.</li> <li>• Physical Chemistry of Polymers – A. Tager, 2<sup>nd</sup> ed, 1978, Mir Publishers.</li> <li>• Viscoelastic Properties of Polymers – J. D. Ferry, 3<sup>rd</sup> ed, 1980, Wiley.</li> </ul>	
<b>6.</b>	<b>MAP 1201 Engineering Applications of Computers (Lab)</b>	
	Computer Programming Languages: FORTRAN, C, C++, etc.	32
	Softwares : Wordprocessing, Spreadsheets, Database, etc.	8
	Softwares for Libraries etc.	8
	Introduction to Computer Hardware, Architecture, Networking	12
<b>7.</b>	<b>CHP 1232 – Organic Chemistry Laboratory II (50 marks) 3hr./week</b>	
	Synthesis of several organic compounds such as acetanilide, m-dinitrobenzene, methyl salicylate, benzamide, o-chlorobenzoic acid, tribromophenol, p-nitrobenzoic acid, azo dye, etc. to demonstrate the various unit processes like oxidation, reduction, alkylation chlorination, nitration, etc. Separation and purification of binary mixtures of the type : water soluble-water insoluble, both water	

	soluble, liquid-liquid by distillation, dissociation –extraction ,crystallization, etc.	
<b>8.</b>	<b>CHP 1222 – Analytical Chemistry Laboratory (50 marks) 3hr./week</b>	
	Students will perform eight to ten experiments based on topics that are covered in the theory	
<b>9.</b>	<b>HUP 1101 Communication Skills. (50 marks) 3hr./week</b>	
	Development of communication skills in oral as well as writing. The writing skills should emphasize technical report writing, scientific paper writing, letter drafting, etc. The oral communication skills should emphasize presentation skills. Use of audio-visual facilities like power point, LCD for making effective oral presentation. Group Discussions	

## Detailed Syllabus for Second Year B. Tech (Pharma)

### Semester III

Sr. No.	Topic	Hrs
<b>1.</b>	<b>GET1104 – Engineering Mechanics and Strength of Materials (50 marks) 3hr./week</b>	
<b>2.</b>	<b>GET1105 – Electrical and Electronics Engineering (50 marks) 3hr./week</b>	
<b>3.</b>	<b>CHT1341- Physical Chemistry (100 marks) 4hr./week</b>	
<b>4.</b>	<b>PHT1021–General Aspects of Pharmaceuticals and Physiopharmacology - I (100 marks) 4hr./week</b>	
	Over view of Pharmaceutical Industry	1
	Introduction to human body, Organization of human body, Different system of human body, Definitions and examples of different drug categories, composition and functions of blood, cardiac cycle	14
	Introduction to pharmacopoeias, Routes of drug administration, introduction to bio pharmaceuticals	10
	Discussion of monographs and general test procedures and their importance, inorganic chemicals of pharmaceutical importance with respect to their manufactures and uses, assay methods	5
	Hematinics, thrombolytics, coagulants / anticogulants	4
	Digestive system antacids, purgatives	4
	Structure and function of kidney, diurectics	4
	Respiratory system	3
	General pharmacology (ADME, routes of administration, MOA)	10
	Bioassay: histamine and antihistaminic, Pharmacology and local anesthetics	5
	<ul style="list-style-type: none"> <li>• Remington’s Pharmaceutical Sciences, A.R.Gennaro Mac Pub. Co. <b>5.</b>	<b>BST1101 – General Microbiology (50 marks) 3hr./week</b>	
<b>6.</b>	<b>BST1103 – Biochemistry (50 marks) 3hr./week</b>	
<b>7.</b>	<b>GEP1106–Electrical and Electronics Engineering Laboratory (50 marks) 4hr./week</b>	
<b>8.</b>	<b>CHP1342–Physical Chemistry Laboratory (50 marks) 4hr./week</b>	
<b>9.</b>	<b>PHP1021–Physiopharmacology Laboratory (50 marks) 4hr./week</b>	
	RBC count, WBC count, Differential leucocytes count, Hemoglobin estimation, Blood grouping	
	Histology, study of effects of various drugs on isolated frogs heart e.g Ach, adrenaline, effect of adrenergic and cholinergic blockers, effect of ions on the isolated frog heart (through audiovisual demonstration)	
	Demonstration of different routes of administration of drugs. Effects of clotting time, bleeding time	

### Semester IV

Sr. No.	Topic	Hrs.
<b>1.</b>	<b>CET1105-Transport Phenomena (100 marks)</b> <b>4hr./week</b>	
<b>2.</b>	<b>PHT1041 – Medicinal Chemistry-I (100 marks)</b> <b>4hr./week</b>	
	Introduction to Medicinal and Pharmaceutical Chemistry (a) Methods of classification of drugs based on structure and biological activity	1 1
	(b) Concept of acidity and basicity of drugs and pKa values. Introduction of absorption distribution of drugs based on physicochemical properties	3
	(c) Drug metabolism chemistry	3
	Study of the chemistry of the following classes of drugs: nomenclature, classification, SAR, Synthesis Anti-infective agents: antiseptic and disinfectant; antibacterial- sulfonamides, quinoline, DHFR antagonists, antibiotics including stability and degradation products, antiparasitic agents- antimalarial, antiamoebic, antihelminthic, antimycobacterial agents, antifungal agents, anticancer agents, antiviral agents	18
	Study of the chemistry of the following classes of drugs including nomenclature, classification, SAR, Synthesis: (a) ANS drugs: Drugs affecting neurotransmission- cholinergic, adrenergics	8
	(b) CNS drugs: Serotonergics and their antagonists	6
	(c) CNS drugs General Anesthetics, hypnotics, anti-seizure drugs, Antipsychotic and antianxiety agents, analgesics, anti-Parkinson drugs,	20
	<ul style="list-style-type: none"> <li>• Burger's Medicinal Chemistry &amp; Drug Discovery: Vol. 1 to 6; Ed.: A. Burger and M. E. Wolff; John Wiley &amp; Sons-New Jersey.</li> <li>• Foye's Principles of Medicinal Chemistry; Ed.: W. O. Foye; Lippincott Williams &amp; Wilkins-Philadelphia.</li> <li>• Textbook of Medicinal and Pharmaceutical Chemistry; Ed.: Charles Owens Wilson; Lippincott Williams &amp; Wilkins – Philadelphia.</li> <li>• Organic Synthesis-The Disconnection Approach; Ed.: Warren S.; John Wiley &amp; Sons-Chichester.</li> </ul>	

	<ul style="list-style-type: none"> <li>Pharmaceutical Substances: Synthesis, Patents, Applications (N-Z); Ed: A. Kleemann; Georg Thieme Verlag-Stuttgart.</li> <li>Strategies for Organic Drug Synthesis and Design; Ed.: Lednicer &amp; Daniel; John Willey &amp; Sons Inc., New York.</li> <li>Organic Chemistry of Drug Synthesis: Vol. 1 to 6; Ed.: Daniel Lednicer; John Wiley &amp; Sons Inc.- New York.</li> </ul>	
<b>3.</b>	<b>PHT1051-Chemistry of Natural Products (100 marks) 4hr./week</b>	
	Vitamins: Classification, chemistry of biological role, synthesis	16
	Hormones (other than steroid):Classification, chemistry of biological role, synthesis, Bioactive peptides including peptide hormones: Chemistry of peptide, characterization, protection of amino acids, Synthesis of peptides general, synthesis of peptide hormones, Structure of poisonous peptides.	16
	Terpenes, terpinoids and carotinoids:Classification, occurrence, isolation, characterization and chemistry of terpenes, biologically active terpenes. Terpenes as pharmaceutical raw materials.	6
	Plant pigments: Occurrence, classification, nomenclature, and structure, Chemistry of biologically important flavanoids, Flavanoids as raw materials.	6
	Pyrethroids and retinones: Occurrence, reactions, biological activity, structure and Chemistry	5
	Eicosanoids:Classifications, nomenclature, and chemical propertoies, and biological activity of Thromboxanes, Prostaglandins, Leukotrienes,	5
	Marine Natural Products: Introduction, occurrence and characteristic structural features, And structure of few marine products.	2
	Alkaloids and antibiotics will be covered elsewhere however An overview of these to be given.	2
	Porphyrins:Structure, general chemistry and properties, examples Haemoglobin, chlorophyll, cytochromes, etc.	2
	Few natural products from current literature that are having exciting Bioactivity to be discussed in general irrespective to which class they belong.	1
	<ul style="list-style-type: none"> <li>Natural Products: chemistry and biological significance J. Mann, R.S. Davidson, et. Al.</li> <li>Insecticides of Natural Origin, Sukh Dev,</li> <li>Introduction to Flavanoids, B,A. Bohm,</li> <li>Many Organic chemistry and Medicinal chemistry books cover natural Products those can be referred.</li> </ul>	
<b>4.</b>	<b>PHT1022-Physiopharmacology – II (50 marks) 3hr./week</b>	
	CNS and drugs acting on CNS	8

	ANS and drugs acting on uterus, oral hypoglycemic, chemotherapy	12
	Drugs used in hypertensive, vasodilator, Immunopharmacology	10
<b>5.</b>	<b>PHT1052–Medicinal Natural Products (50 marks) 3hr./week</b>	
	Scope of the subject, Source of the drug of natural origin, Classification of drug, factors involved in the production of drugs.	8
	Phytochemistry Chemical constituents in the production of plants (carbohydrates, protein enzymes, lipids, alkaloids, glycosides, steroids, tannins, terpenoids, flavonoids, plant pigments, etc)	5
	Biosynthesis approach	3
	Extraction and isolation of plant drugs: conventional and modern techniques used in extraction and separation of phytoconstituents	3
	Commerce and quality control, application of spectroscopy and chromatography techniques for isolation, identification and analysis of phytoconstituents	5
	Detailed study of one representative from each of the above mentioned chemical class (10drugs)	5
	Recent advances in phytopharmaceuticals (topic of current interest)	1
<b>6.</b>	<b>PHP1052-Medicinal Natural Products Laboratory (50 marks) 4hr./week</b>	
	<b>Medicinal Natural Products Laboratory</b>  Standardization of plant drugs using following methods (a) Morphology, microscopic quantitative microscopy, details microscopic study of drugs (b) Physical constants like: specific gravity, swelling factor, ash values, extractive values, refractive index, optical rotation, etc (c) Chemical methods identification tests for various classes of phytoconstituents, Extraction and isolation of active principles such as alkalis, glycosides, tannins, carbohydrates resin, essential oils, fats etc. from natural drugs (4-5drugs) and evaluation of isolated material by chromatography and spectroscopy.	
<b>7.</b>	<b>PHP1071– Biochemistry Laboratory (50 marks) 4hr./week</b>	
	Qualitative test for carbohydrates, confirmatory tests by osazone formation, Quantitative estimation of glucose by Wilstaters and Lane and Eynon method, estimation of sucrose, simple color reactions of proteins and amino acids, precipitation reactions of proteins; Determination of acid value and iodine value of lipids; enzymes: Ptyline activity of saliva	15

<b>8.</b>	<b>PHP1072–Microbiology Laboratory (50 marks)</b> <b>4hr./week</b>	
	Study of microscopy, study of common laboratory equipment; Preparation and sterilization of nutrient broth, agar slants, stabs, plates; inoculation technique: Colony characteristics and growth patterns in broth of cocci and bacilli, Grams staining; monochrome staining, negative and vital staining; cell wall spore, capsule and flagella staining; motility by hanging drop technique; Microbial limit test, microbial assay, biochemical tests	

## Detailed Syllabus for Third Year B. Tech (Pharma)

### Semester V

Sr. No.	Topic	Hrs
<b>1.</b>	<b>GET1104 – Chemical Engineering Operations (50 marks) 3hr./week</b>	
<b>2.</b>	<b>GET1104 – Chemical Reaction Engineering (50 marks) 3hr./week</b>	
<b>3.</b>	<b>PHT1042- Pharmaceutical Chemistry (50 marks) 3hr./week</b>	
	Chemistry of heterocyclics of pharmaceutical interest: Structure, nomenclature, and reactivity	5
	Retrosynthetic analysis and synthesis: Idea and logic, terminologies, and strategies, transformation and functional group based strategies with examples of synthesis of drug molecules, building block based strategies with examples of synthesis drugs molecules, heterocyclic ring construction and drug synthesis, Synthesis of some drugs recently introduced to be covered	20
<b>4.</b>	Retrosynthetic analysis of relatively simple natural products and their Synthesis - to be selected from for example betalactam antibiotics, alkaloid drug, etc those regarded as classics in synthesis.	5
	<ul style="list-style-type: none"> <li>• Organic Synthesis- The Disconnection Approach; Ed.: Warren S.; John Wiley &amp; Sons-Chichester.</li> <li>• Organic Synthesis- The Disconnection Approach; Ed.: Warren S.; John Wiley &amp; Sons-Chichester.</li> <li>• Organic Chemistry, Louden</li> <li>• Organic Chemistry, Carey</li> <li>• Classics in Organic Synthesis, K.C. Nicolaou</li> <li>• Logic of Chemical Synthesis, E.J. Corey</li> </ul>	
<b>5.</b>	<b>PHT1061– Pharmaceutical Biotechnology (50 marks) 3hr./week</b>	
	Application of Biotechnology in foods, pharmac, and other industries with special reference to enzymes	3
	Definitions, nomenclature and terminologies, isolation purification strain improvements, optimization of growth and product formation using industrially important micro organism	5
	Genetic engineering principles and technique	4

	Principles of surface and solid state fermentation, Design of different fermentors and the biochemical engineering aspects. Process control of fermentations.	8
	Fermentation technology of industrial chemicals, organic acids, amino acids, vitamins, polysaccharides, antibiotics, etc.	5
	Enzyme fermentation and technology including immobilization and enzyme reactors. Fermentative animals, and other developments	5
	<ul style="list-style-type: none"> <li>Principles of fermentation technology, Stanbury P. F. and Whitaker A.</li> <li>Industrial microbiology, Prescott S. and Dunn C.</li> <li>Elements of biotechnology, Gupta P.K.</li> <li>Plant cell, Tissue and Organ culture, Gamburg O.L. and Phillips G. C.</li> <li>Basic bioreactor design, Riet K. V. and Tramper J.</li> <li>Bioreactor system design, Asenjo J. A.</li> <li>Bioreactor immobilized enzymes and cells: fundamentals &amp; applications, Moo-young M.</li> <li>Industrial fermentations: Underkofler L. A. and Hickey R. J. Vol. I and II</li> </ul>	
<b>6.</b>	<b>PHT1031 – Pharmaceutical Analysis (50 marks) 3hr./week</b>	
	Raw materials for Pharmaceutical Industry	1
	Enzymes as catalyst (a) in Synthesis for Pharmaceuticals (b) Introduction to Principle of enzymes catalyst, Lipases and esterase's for hydrolytic conversion. Lipases and esterase's in organic solvents, other hydrolytic reactions, Enzyme-catalyzed oxidation reactions, Enzyme-catalyzed C-X bond synthesis, Enzyme-catalyzed reduction, Chiral Technology	14
	Chemical Development of enantiomerically pure products, resolution, chiral synthesis etc	2
	Separation (a) Aspect of Chemical Purification and process separation technology (b) Introduction to Separation technology; choosing a separation process, Adsorption Separation methods, Simulated moving bed (SMB) chromatography; Large scale chromatography; Homogeneous, Heterogeneous catalyst and phase transfer catalyst	8
	Mixing (a) Flow pattern and theories (impeller); suspension of solid particles; lipid- lipid dispersion; three phase dispersion; mass transfer at gas-liquid, solid-liquid, solid-solid, process design and scale up of mixing	5
	<ul style="list-style-type: none"> <li>Wolfgang Aehle, "Enzymes in Industry Production and Applications" Wiley VCH Publication, 2003</li> </ul>	

	<ul style="list-style-type: none"> <li>• Heinrich Klefenz, “Industrial Pharmaceutical Biotechnology” Wiley-VCH Publication, 2002.</li> <li>• T. Scheper, “Process Integration in Biochemical Engineering” Springer Publication, 2003.</li> <li>• Oligan Repic, “Principles of Research and Chemical Development in the Pharmaceutical Industry Wiley Interscience 1998.</li> <li>• Romano Di Fabio, “From Bench to Market the Evolution Chemical Synthesis” Oxford University Press, 2000</li> </ul>	
<b>7.</b>	<b>PHT1011 – Technology of Liquids and Topicals (50 marks) 3hr./week</b>	
	Introduction and classification of pharmaceutical dosage forms	2
	Preformulation, formulation, evaluation, large scale manufacture and packaging with focus on equipment with reference to Liquid dosage forms; Monophasic solution syrups, elixirs, Nasal and ear drops etc.	6
	Biphasic suspensions and emulsions	10
	Topicals formulations: ointments, creams, gels	5
	Suppositories	3
	Layout design and Unit operations related to above dosage forms	4
	<ul style="list-style-type: none"> <li>• Pharmaceutical Dosage Forms And Drug Delivery Systems, Ansel, Philadelphia, Fea and Febiger, 1985</li> <li>• Introduction to Pharmaceutical Dosage Forms, Ansel, Henry Kimpton Publishers, London.</li> <li>• Pharmaceutical: The Science of Dosage Form Design, Aulton, New Delhi, B. <b>9.</b>	<b>PHP1031- Pharmaceutical Analysis (50 marks)</b> <b>4hr./week</b>	
	<p><b>Pharmaceutical Analysis</b> Analysis of bulk actives, raw material, and active ingredients in formulation:</p> <ul style="list-style-type: none"> <li>• Wet and instrumental methods</li> <li>• Structural analysis using spectra</li> <li>• Some specific tests from monographs</li> </ul>	
<b>10.</b>	<b>PHP1061– Biotechnology Laboratory (50 marks)</b> <b>4hr./week</b>	
	<ol style="list-style-type: none"> <li>1. Preparation of Buffer</li> <li>2. Immobilization of enzyme or yeast cells</li> <li>3. Wine production</li> <li>4. Strain improvement by UV survival (Mutation)</li> <li>5. Separation of DNA by Gel Electrophoresis</li> <li>6. Estimation of DNA and RNA</li> <li>7. Microbiological assay – Penicillin Bioassay</li> <li>8. MPN method of Water</li> <li>9. Tissue culture</li> <li>10. Lactic acid fermentation of Milk</li> <li>11. Biochemical tests: Sugar Fermentation, Hydrolysis of Gelatin, Starch and Urea, Nitrate Reduction, Coagulase test, Oxidase Test, Catalase Test, IMIVC test</li> <li>12. Factors affecting enzyme activity: Km, pH, Temperature, Vmax</li> </ol>	

## Semester VI

Sr. No.	Topic	Hrs.
<b>1.</b>	<b>CHT1341- Instrumentation (50 marks) 3hr./week</b>	
<b>2.</b>	<b>PHT1043 – Medicinal Chemistry-II (100 marks) 4hr./week</b>	
	Antihistaminic including anti-ulcer drugs, emetics, antiemetics, Non-steroidal anti-inflammatory agents, antipyretics Anti-osteoporotic drugs,	10
	<b>CVS-Drugs</b> Cardiovascular drugs Diuretics, anticoagulants, thrombolytics and antithrombotics, cardiac agents, antihypertensive, antihyperlipidemics, local anesthetics, diagnostic agents anticancer agents, antiviral agents,	15 17
	Drugs acting on hormonal system	2
	(a) Ant diabetic agents	3
	(b) Steroid hormones-adrenocorticoids, antiinflammatory steroids	4
	(c) Sex steroids and antagonists, oral contraceptive, anabolic steroids	5
	(d) Thyroid and ant thyroid agents	2
	(e) Drugs acting on calcium homeostatic, iron preparation	2
	<ul style="list-style-type: none"> <li>• Burger’s Medicinal Chemistry &amp; Drug Discovery: Vol. 1 to 6; Ed.: A. Burger and M. E. Wolf; John Wiley &amp; Sons-New jersey.</li> <li>• Foye’s Principles of Medicinal Chemistry; Ed.: W.O.Foye; Lippincott Williams &amp; Wilkins-Philadelphia</li> <li>• Textbook of Medicinal and Pharmaceutical Chemistry; Ed.: Charles Owens Wilson; Lippincott Williams &amp; Wilkins-Philadelphia.,</li> <li>• Organic Synthesis- The Disconnection Approach; Ed.: Warren S.; John Wiley &amp; Sons-Chichester.</li> <li>• Pharmaceutical Substances: Synthesis, Patents, Applications (N-Z); Ed: A. Kleemann; Georg Thieme Verlag-Stuttgart.</li> <li>• Strategies for Organic Drug Synthesis and Design; Ed.: Lednicer &amp; Daniel; John Wiley &amp; Sons Inc.-Inc.-New York.</li> <li>• Organic Chemistry of Drug Synthesis: Vol.1 to 6; Ed.: Daniel Lednicer; John Wiley &amp; Sons Inc. New York.</li> </ul>	
<b>3.</b>	<b>PHT1044- Drug Discovery Process and Drug Design (50 marks) 3hr./week</b>	
	General introduction to drug discovery, molecular discovery to market	5

	<p>to be discussed, meaning of hit, lead, lead development, toxicity study, various phases of clinical trials, synthetic methods, ADME, entire gamut including filing of various applications and approvals to be covered with significance of each aspect. Objective is to expose the students to the entire process and details to be covered accordingly.</p> <p>Introduction to various sources and approaches for new chemical entities, (Coverage to be at appropriate depth and level with suitable examples)</p> <p>Drug Receptor interaction, drug action theories, classification of receptor outline, General screening approaches outline.</p> <p>source: Medicines used in folklore and traditional system of treatment and their regulatory requirements to market, concept of reverse pharmacology and an approach for drug discovery.</p> <p>a) Random screening approach, methodology. 2</p> <p>b) Analog design and tools: SAR, QSAR, CADD - Molecular modeling, bioisostericism and other concepts 2</p> <p>c) SBDD: general concept, molecular modeling, docking 2</p> <p>d) Fragment based drug design, 2</p> <p>e) Enzyme inhibitors as drugs</p> <p>f) Meaning of lead optimization and general approaches</p>	<p>4</p> <p>2</p> <p>2</p> <p>9</p> <p>2</p> <p>2</p> <p>2</p> <p>2</p>

<b>7.</b>	<b>CHP1342– Chemical Engineering Laboratory (50 marks) 4hr./week</b>	
<b>8.</b>	<b>PHP1042– Pharmaceutical Chemistry Laboratory (100 marks) 8hr./week</b>	
	Preparation of compounds in common use in pharmaceutical industry-simple transformation using newer reagents (1- exercise) Concise writing of procedures and presentation for selected reaction from the latest literature (5 examples)	

<b>9.</b>	<b>PHP1012– Solid Dosage Forms Laboratory (50 marks) 4hr./week</b>	
	<p>Solid Dosage Forms</p> <ul style="list-style-type: none"> <li>(a) Preparation and evaluation of tablets of the following types: conventional, chewable, effervescent, soluble, dispersible, mouth dissolve, using different binders/granulation methods</li> <li>(b) Filling and evaluation of hard gelatin capsules</li> <li>(c) Micro encapsulation of liquids and solids</li> <li>(d) Large scale manufacture and evaluation of tablets (demonstration)</li> <li>(e) Coating of tablets (demonstration)</li> <li>(f) Evaluation of coated tablets</li> </ul>	

## Detailed Syllabus for Final Year B. Tech (Pharma)

### Semester VII

Sr. No.	Topic	Hrs
<b>1.</b>	<b>GET1104 – Project Economics (50 marks) 3hr./week</b>	
<b>2.</b>	<b>GET1104 – Industrial Psychology and Human Resource Management (50 marks) 3hr./week</b>	
<b>3.</b>	<b>PHT1046 – Process Technology Drug and Intermediates (50 marks) 3hr./week</b>	
	Manufacturing processes for drugs involving multiple steps and comparative study of various routes of synthesis	10
	Introduction, the chemical process life-cycle, Legislative requirements for safe process development and scale up, Development techniques for safe process design, Unit operations posing particular hazards during development, Strategies for chemical hazards assessment, Hazards of gas and vapor generation, Identification of highly-energetic materials, Small scale screening tests; case studies, Flammability issues associated with chemical manufacture, Gas and Vapor pressure systems, Process control consideration and safety critical systems, GMP in chemical development	5
	Optimization of Organic Reactions and Processes (a) Introduction-the purpose of chemical development, Discovering the best synthetic route; Selecting the best route for scale-up, Choice of raw materials, reagents etc; case studies, The investigative approach to chemical development, Effect of process variables on yield and quality of products; Quality control in process analysis as an aid to optimization, Designing a robust process and preventing scale-up problems, Solvent effects, Work up and product isolation, Selecting the parameters to vary, Planning for scale up, Design of environmentally friendly processes, Effluent minimization and control, Statistical methods of optimizations.	15
	<ul style="list-style-type: none"> <li>• A. Liese, “Industrial Bio transformations” Wiley-VCH 2000</li> <li>• Mahmoud M. “Pollution Prevention Through Process Integration (Systematic Design Tools)” Academic Press, 1997</li> <li>• Neal G. Andreson, “Practical Process Research and Development” academic Press, 2000</li> <li>• A. Cybulski, “Fine Chemicals Manufacture- Technology and Engineering Elsevier Publication, 2000</li> </ul>	

	<ul style="list-style-type: none"> <li>• “Mixing Equipment (Impeller type)” AIChE Publication 2001</li> <li>• “Chemical Process Quantitative Risk Analysis” AIChE Publication, 2000</li> </ul>	
<b>4.</b>	<b>PHT1013 – Validation and Regulatory Requirements (50 marks) 3hr./week</b>	
	CGMP and Quality assurance, Schedule M	6
	Process, product validation and quality audits. Documentation	9
	New drug application (NDA), generic products(ANDA), Schedule Y	3
	DPCO, drugs and cosmetics act and rules including licensing intermediates industry	12

<b>6.</b>	<b>PHT1047– Structural Analysis by Spectroscopy (50 marks) 3hr./week</b>	
	<p><b>Ultraviolet and Visible Spectrophotometry:</b> Electronic transition, spectrum, shift of bands with solvents, isolated double bonds, conjugated dienes, carbonyl compounds, and aromatic compounds. Single and multicomponent quantitative analysis (including derivative spectroscopy) Application of UV in structure determination including Woodward Fischer rules.</p>	6
	<p><b>Infrared Spectroscopy:</b> Molecular Vibrations, Frequency shifts associated with structural changes; Basic theory of FTIR spectroscopy, Qualitative and quantitative analysis using infrared spectroscopy. Interpretation of IR spectra and application of IR in structure determination.</p>	4
	<p><b>Nuclear Magnetic Resonance:</b> Basic principles of NMR phenomenon, relaxation processes, spin-spin interaction, chemical shifts, interpretation of NMR spectra. Application of NMR in structure determination.</p>	10
	<p><b>Mass spectroscopy:</b> Basic principles, ionization of a molecule on electron impact, fragmentation processes in organic compounds, interpretation of mass spectra, molecular formula and mass; Instrumentation-different</p>	6

	types of ionization sources and magnetic analyzer. Interpretation of MS and application in structure determination.	
	Problems in structure determination using an integrated approach – the four spectroscopic techniques of UV, IR, NMR and MS.	4

<b>7.</b>	<b>PHP1046– Process Technology Laboratory (100 marks) 8hr./week</b>	
	Synthesis of drugs involving two or more steps (a) with analysis of raw materials and product synthesis (b) in process control and reaction monitoring	
	Any innovative modifications in the process of drug synthesized (2 examples) and no repetition of the same from previous years	
	Bioconversions.	
<b>8.</b>	<b>PHP1014– Sterile Products Laboratory (50 marks) 4hr./week</b>	
	<p>Sterile Product</p> <p>(a) Preparation and evaluation of injectables formulations to represent types( solution, suspension, emulsion), different methods of sterilization, tonicity adjustment</p> <p>(b) Preparation and evaluation of one LVP</p> <p>(c) Monographic testing of water for injection</p> <p>(d) Evaluation of parenteral containers and closures</p> <p>(e) Preparation and evaluation of eye drops and eye ointments</p> <p>(f) Workshop on accelerated stability testing</p>	
<b>19.</b>	<b>PHP1071– Seminar (50 marks) 4hr./week</b>	

## Semester VIII

Sr. NO.	Topic	Hrs.
1.	<b>CHT1341- Industrial Management (50 marks) 3hr./week</b>	
2.	<b>PHT1042- Value Education (50 marks) 3hr./week</b>	
3.	<b>PHT1061– Design and Analysis of Experiments (50 marks) 3hr./week</b>	
4.	<b>PHT1015- Drug Delivery Systems (50 marks) 3hr./week</b>	
	Performulation, Formulation, Evolution, Large scale manufacture and packing with focus on equipment with reference to Oral sustained and controlled release dosage forms	10
	Aerosols	4
	Introduction to Novel drug Delivery Systems: Transdermal, Transmucosal(buccal, sublingual, nasal, vaginal, rectal), Ophthalmic, Colloidal: Liposome's, nanoparticles, emulsion systems etc	12
	Introduction to Radio pharmaceuticals, Overview of cosmetic products	4
	<ul style="list-style-type: none"> <li>• Pharmaceutical Dosage Forms And Drug Delivery, Systems, Ansel, Philadelphia, Fea and Febiger, 1985</li> <li>• Introduction to Pharmaceutical Dosage Forms Ansel, Henry Kimpton Publishers, London.</li> <li>• Pharmaceutics: The Science of Dosage Form Design Aulton, New Delhi, B. <b>5.</b>	<b>PHT1016-Nanoscience and Technology (50 marks)</b> <b>3hr./week</b>	
	Definitions, classification of nanostructures and systems, nanotechnology and pharmaceutical applications(Introduction)	3
	Nanoscale properties as a function of size: structural properties, chemical properties, mechanical properties, thermal properties, optical properties, magnetic properties, electronic properties	5
	Fabrication methods(general approaches): Top-down, bottom-up and templating approaches	5
	Characterization methods(general aspects of each methods to be covered rather than in depth): Imaging(microscopy) methods, analysis(spectroscopy) methods, size measurements etc	5
	Self-assembling nanostructure: principle of self assembly(non-covalent inter actions and intermolecular packing), preparation and characterization of Nanoparticles through vesicular and micellar polymerization, nanofilms	5
	Gold and silver Nanoparticles: preparation, properties and pharmaceutical/healthcare applications	3
	Molecular nanomaterials: dendrimers	1
	Nanotechnology in catalysis: nanostructure and catalysis - fundamental principles, examples of nanocatalyst based synthetic methodologies	3
	<ul style="list-style-type: none"> <li>• Nanoscale Science and Technology; R. Kesall, I. Hamley, M. Geoghegan;</li> <li>• Nanobiotechnology(Concepts, applications and perspectives); C.M. Niemeyer and C.A. Mirkin; Nanotechnology in catalysis Vol 1 &amp; 2, B. Zhou, S. Hermans and G.A. Somorjai;</li> <li>• Teacher shall prescribe some latest review articles.</li> </ul>	

6.	<b>PHT1017– Pharmaceutical Packaging Technology (50 marks) 3hr./week</b>	
	Introduction to Packaging, Classification of Packaging, Essential Requirements, Functions of Packaging, Importance / significance of Pharma Packaging, Properties of Ideal Package, Packaging formats in Pharma Industry, Packaging recycling symbols, FDA Definitions	2
	Introduction to Packaging materials, Classification of Packaging materials, Approach to package design, New Trends in the pharmaceutical packaging	2
	Introduction to plastics and polymers, Raw Materials of Plastics, Types of Plastics, Resin identification code, Plastics and Packaging, testing of plastic containers	2
	Introduction to glass, Selection of glass as packaging materials for the pharmaceutical products , Advantages and disadvantages of glass containers ,Properties of glass, Production of glass, Types of glass, Manufacturing of Glass containers, Testing of glass containers	3
	Introduction to metals, Aluminium and Aluminium foil , Collapsible Tubes ,Tin, Stainless steel	1
	Introduction to blister package, Blister design parameters, Materials, Formation, Types of Blisters, Advantages and disadvantages of Blister Packaging, Types of Problems/ Defects, Blister Packing Machine, Other packages, Strip Packs- High Barrier Laminates, Strip Packaging Process, Properties of Materials, Child-resistant strip package, Strip Sealing Machine, Strip Packing Machinery, Multi-Dose Strip Packaging	3
	Introduction to Ancillary Materials used in Packaging, Adhesives , Paper , Paperboard, Wood, fibreboard , Packaging inserts , leaflets	1
	Introduction to natural and synthetic rubber, Types of closures, Classification of contemporary closures by their utility, Special-purpose Closure, Closure Functions, Closure Materials, Types of Plastic Closures, Sealing Systems, Liners, Closure Liner Functions, Classification of Liners, Selection of Lining Material, Options for Closure Liners, Innerseals, Linerless Closures, Types of tapes, Strapping Materials, Evaluating Closure Liners, Standard Liners, Taseal, Solutions, Liner Description, Liner Designations	3
	Introduction, Components of Corrugated fibre board, Types of Corrugated Board, Advantages & Disadvantages, Manufacturing, Box Structure, Box Dimensions, Types of Box, Applications of C.F.B., New developments in CFB	2
	<b>Sterilization of packaging materials</b> Introduction, Pharmaceutical Importance of Sterilization, Physical and Chemical Factors that affect sterilization, Terms commonly used, Classification of Sterilization Methods, Sterilization of Packaging Materials, Tests for Sterility , Incubation and examination of sterility tests, Interpretation of the test results, Evaluation of Sterilization Method, Process of Microbial Destruction, Evaluation	2

	and In Process Monitoring of Sterilization Procedures	
	<b>Packaging of Parenterals, Ophthalmics, And Aerosols</b> Introduction, Packaging of Sterile Pharmaceuticals, Packaging Components, Inspection of Filled Injectable Products, Storage and Labelling, Packaging of Ophthalmics, Selection of Packaging Materials, Packaging of Aerosols	3
	<b>Defects In Packages</b> Introduction, Defects in Packaging Material	1
	<b>Package Testing And Testing of Containers &amp; Closures</b> Introduction, Testing of containers and closures	2
	<b>Stability of Packages</b> Introduction, Legislation, Regulation, Pharmaceutical Stability Testing in Climatic Cabinets, Pharmaceutical Stability Testing Conditions, Photo-Stability Testing, Review of Pharmaceutical Product Stability, Packaging and the ICH Guidelines	2
	<b>Packaging Regulations And Legal Requirements</b>	1
	<ul style="list-style-type: none"> <li>• D. A. Dean, Roy Evans, Ian Hall. Pharmaceutical packaging technology. Tylor and Francis.</li> <li>• Edward J. Bauer, Pharmaceutical Packaging Handbook. Bausch and Lomb, Rochester, New York, USA.</li> <li>• Wilmer A. Jenkins, Kenton R. Osborn. Packaging drugs and pharmaceuticals.</li> <li>• Salvatore J. The theory and Practice of Industrial Pharmacy.</li> </ul>	
<b>7.</b>	<b>PHP1016– Green Chemistry Laboratory (50 marks) 4hr./week</b>	
	Minimum 10 experiments to illustrate the principles of green chemistry/technology. The experiments may include, greener version(S) of classical reactions such as, N-acetylation, O-acetylation, etherification, esterification, bromination, iodination, oxidation, reduction, rearrangement(S) such Beckmann etc , and use of ionic liquid as green solvents.	
<b>8.</b>	<b>PHP1072- Experimental Project (150 marks) 12hr./week</b>
